XELTEK Programmers

XELTEK

SUPERPRO® 5004GP

Features:

- The SUPERPRO includes ultra high speed programming via 32bit RISC MCU device. This is especially suitable for programming high capacity NAND Flash devices
- A 144 pin-driver support is built-in to provide efficient programming of large pin count devices, an additional pin expander module is not necessary to program large pin-count devices
- The SUPERPRO operates with a PC for engineering purpose or in stand-alone mode, without a PC, for repeat production mode programming. This provides seamless migration from engineering to production
- The SUPERPRO communicates through a USB 2.0 port and operates on most Pentium-based, IBM compatible desktop/notebook computers
- The SUPERPRO comes with a standard 48-pin DIP ZIF socket and supports optional socket adapters to accommodate PLCC, TSOP, SOIC, SOP, and QFP

MOUSER STOCK NO.	Xeltek Part No.	Description	Price Each
674-SP5004GP	SUPERPRO-5004GP	Ultra- High Speed 4 Socket Gang Programmer	6735.65

SUPERPRO 5000 SERIES

Features:

- Supports over 75,000 devices, the largest in the industry
- Operates in Stand-alone or PC connected (USB2) mode
- Cluster 1-n units for volume production
- Support complex devices with built-in 144 universal pin-drivers
- Windows 7/Vista/XP compatible
- CE & RoHS compliant. Ideal for Engineering, service and volume production

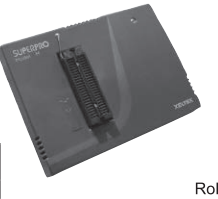
RoHS Compliant

MOUSER STOCK NO.	Xeltek Part No.	Description	Price Each
674-SP5000	SP5000	Ultra-Fast, 144 PIN Stand Alone and USB2 Interface	2134.65

SUPERPRO-M (20,000 + DEVICES)

Features:

- Supports 20,000+ IC devices from 158 manufactures
- ISP/ICP programming capability with adapter
- ARM7 MCU for fast programming speed
- Support complex devices with built-in 48 universal pin-drivers
- PC connected (USB2) mode
- Windows 7/Vista/XP 32/64 bit compatible
- Advanced software functions: Immediate chip operation upon proper insertion, combine processes and file settings into one step, password protection, flexible command sequence, serial number generator and file log
- CE & RoHS compliant. Ideal for Engineering and service



RoHS Compliant

MOUSER STOCK NO.	Xeltek Part No.	Description	Price Each
674-SUPERPRO-M	SUPERPRO-M	Low Cost Advance Universal Programmer 48 Pin and USB2 Interface	636.65

SUPERPRO ISO1

Features:

- ARM9 32bit MCU processing for fast programming speed
- Operates in Stand-alone or PC connected (USB2) mode
- Adjustable speed for various applications
- ISP programming of devices with I2C, SPI, CAN, UART, BDW, MW, JTAG and more serial ports
- ATE interface
- Portable compact size: 137mm(L) x 87mm(W) x 47mm(H)
- One year FREE device update support (restrictions apply)
- CE & RoHS compliant. Ideal for Engineering, service and volume production

SUPEPRO 501S N*CLUSTER

SuperPro501S N4 Cluster is composed of x4 units of the latest and fastest SuperPro501S programmer. Flexibility of n(1-15) unit setup allows for easy expansion as the production need grows. Cluster operation does away with a PC attached, thus saving the cost of a PC, increase reliability of operation, and also save cost of an expensive PC operator. All SuperPro501S features also apply to the cluster model.

APACER Memory Modules

Apacer
Access the best

RoHS Compliant This product is RoHS compliant.

SD2.0 COMMERCIAL SDHC CARDS

Apacer Commercial SDHC Class 4/6/10 Memory Cards are designed specifically for SD 2.0 card applications that put a premium on small form factor with lower power, such as consumer digital cameras, high-resolution cameras, camcorders, and multimedia products. All device and interface configuration data are (such as maximum frequency, card identification, etc.) stored on the card.

Features:
- Variable clock rate 0 - 50MHz
- Correction of memory field errors
- Card Removal during read operation will never harm the content
- Built-in write protection features (permanent and temporary)

RoHS Compliant

For quantities greater than listed, call for quote.

INDUSTRIAL COMPACTFLASH

Apacer Industrial CompactFlash provides solid traceability to ensure all product HW/FW are the same as you qualified.

Features:
- Longevity Support with Fix B.O.M.
- Compliant with CFA 3.0 specifications for CFCIII
- Compliant with CFA 4.1 specifications for CFC4
- Advanced wear-leveling and Block Management
- Secured Protection Zone/Quick Erase for ATA CF
- Interface: PC Card Memory Mode; PC Card I/O Mode; True IDE Mode
- ECC Support: Up to 8/15 bit correction per 512byte page size (BCH)
- Shock: 50G
- Vibration: 15G
- Humidity: 5% ~ 95%
- MTBF (hours): 2,000,000
- Active Mode (Typ.): 80mA/95mA
- Idle Mode: (Typ.): 700μA/900μA

Specifications:
- Ruggedize Power Failure Recovery
- Connector: 50-pin
- Built-in HW ECC and SMART Functions
- Shock resistance, Anti-vibration and Low power consumption

RoHS Compliant

microSDHC™ CLASS 4 MEMORY CARDS

The Apacer microSDHC™ memory card– the world's smallest removable storage – features a thumbnail-sized footprint and sufficient storage for all 3G phones' digital content including high-resolution photos, large audio and video files, MMS, e-mail messages, and Java-based games.

Features:
- Supports ECC function to detect and correct errors
- Supports Wear Leveling function to extend product life cycles
- Complies with highest security of SDMI standard
- Speed Class: Class 4 (minimum write speed of 4MB/sec)
- Available with Norton Internet Security

RoHS Compliant

SDHC CLASS 10 MEMORY CARDS

Designed to meet the trend in consumer cameras, Apacer SDHC Class 10 memory card's write speed is over 10MB per second, and available in 8GB-32GB.

Features:
- Supports ECC function to detect and correct errors
- Supports Wear Leveling function to extend product life cycles
- Mechanical write protection switch
- Speed class: Class10 (minimum write speed of 10MB/sec)
- Available with Norton Internet Security

ON Semiconductor CATALYST LOW POWER 5.0 VOLT PARALLEL EEPROMS

These are fast, low power, 5V-only CMOS Parallel EEPROMs organized as 2K x 8-bits, 8K x 8-bits, 32K x 8-bits or 64K x 8-bits. They require a simple interface for in-system programming. On-chip address and data latches, self-timed write cycle with auto-clear and VCC power up/down write protection eliminate additional timing and protection hardware. DATA Polling signals the start and end of the self-timed write cycle. They also feature hardware write protection. They are manufactured using Catalyst's advanced CMOS floating gate technology. They are designed to endure 10,000 program/erase cycles and has a data retention of 10 years.

Features:

- Fast read access times
- Low power CMOS dissipation
- Simple write operation:
  On-chip address and data latches
  Self-timed write cycle with auto-clear
- Fast write cycle time: 5ms max.
- CMOS and TTL compatible I/O
- Hardware and software write protection
- Automatic page write operation
- End of write detection
- 100,000 program/erase cycles
- 100 year data retention

CYPRESS Memory

RoHS Compliant **This product is RoHS compliant.**

Cypress is an industry leader in synchronous, fast asynchronous, low power asynchronous and non-volatile SRAMs, as well as in multi-port solutions and FIFO products. The company remains an optimal solution for a memory market characterized by a shrinking supplier base and dwindling product portfolios. As companies continue to abandon the market, Cypress remains an innovative, reliable, committed supplier for your memory needs. Our long-term commitment to the broadest product line, product development, industry longevity, and most advanced technology sets Cypress apart as a memory supplier of choice. Whatever your application—from handhelds to network gear—Cypress's memory lineup is a testament to versatility: micropower, fast-asynchronous, synchronous, and nonvolatile SRAMs, as well as multi-port, FIFO, and serial EEPROM memories. In a market landscape dotted by "EOL", Cypress gives you the support and confidence you need for the long run.

Cypress provides the broadest portfolio of fast asynchronous SRAMs from 4Kb to 32Mb available in industry standard voltage, bus width, and package options. These devices offer the fastest access times available, making them optimal for network equipment. The company's fast asynchronous SRAMs are supported by best-in-class process technology, manufacturing and customer support. The fast asynchronous SRAMs are offered in RoHS-compliant, industry-standard packaging options such as: FBGA, VFBGA, SOJ, TSOP, TSOP II, and PDIP, in industrial temperature range.

Advantages:
- Access time: 10ns in industrial temperature range
- Low Power Dissipation
- Industry standard packaging options and RoHS compliant
- Cutting edge of process technology: 90nm
- Industrial and automotive temperature ranges

Applications:
- Switches and routers
- IP-phones
- Test equipment
- DSLAM cards
- Automotive electronics

CYPRESS Memory

RoHS Compliant **This product is RoHS compliant.**

MULTI-PORT MEMORIES

Cypress's multi-port memory solutions offer the highest-performing interconnects in the industry. Our multi-port memory portfolio includes more than 250 synchronous and asynchronous products in densities from 8Kb to 36Mb. The FullFlex™ family of high density synchronous dual-port SRAMs developed in 90nm technology is offered in 4Mb, 9Mb, 18Mb, and 36Mb densities in x18, x36, and x72 configurations. Cypress multi-ports are offered in industry-standard packaging such as: TQFP, FBGA , PLCC and molded DIP.

NON-VOLATILE SRAM

Cypress's nonvolatile SRAM integrates the company's proprietary Quantum Trap™ nonvolatile elements into high-performance SRAM memory cells. The memory array is accessed the same way as conventional SRAM, supporting standard system designs while adding the ability to retain data when power is lost. On power-up "recall," the nonvolatile elements set the state of the SRAM, then the nvSRAM can be read or written without altering the nonvolatile elements. Recall may also be initiated upon command. Parallel transfer of all data from the nonvolatile elements to SRAM requires a maximum of only 20 milliseconds to complete.

SYNCHRONOUS SRAMS

Cypress is committed to offering a complete range of high-density synchronous SRAM families, including QDR/DDR , II and II , No Bus Latency™ and standard pipelined and flow-through products. From 1Mb to 72Mb, Cypress delivers the industry's broadest synchronous SRAM portfolio. This commitment to SRAM technology is demonstrated by the company's investment and product development in 65nm technology for 144Mb products. As a top-tier synchronous SRAM manufacturer, Cypress complements its products with best-in-class manufacturing and customer support. No other supplier can match Cypress in density, speed-grade options, temperature ranges, and TQFP and BGA leaded and lead-free packaging.

CYPRESS Memory

RoHS Compliant **This product is RoHS compliant.**

ULTRA LOW POWER SRAMS

Cypress is committed to maintaining support for both fast asynchronous and low-power SRAMs, even with major players exiting the market. Offering the most advanced process technology in the SRAM world, Cypress's MoBL™ SRAMs dominate the low-power segment with the industry's broadest portfolio, from 64Kb to 64Mb. Cypress's RoHS-compliant MicroPower SRAMs offered in industry-standard packaging options such as: FBGA, VFBGA, SOIC, STSOP, TSOP, TSOP II, PDIP, in industrial temperature range. These SRAMs are appropriate for high-performance, high-battery-life memory solutions.

For quantities greater than listed, call for quote.

FIFOS

Cypress delivers FIFO memories in densities ranging from 2Kb to 1Mb which provide ideal solutions to interconnect problems like flow control, rate matching and bus matching. The comprehensive FIFO product line is offered in industry standard packaging such as: TQFP and PL CC. These devices can be easily integrated into new and existing designs to help designers simplify system design and reduce design cycle time. More than 100 types of asynchronous and synchronous FIFO memories are available.

For quantities greater than listed, call for quote.

EVERSPIN Technologies MRAM Memory

RoHS Compliant This product is RoHS compliant.

MRAM (MAGNETORESISTIVE RANDOM ACCESS MEMORY) MEMORY

Everspin MRAM is a revolutionary memory that uses the magnetism of electron spin to provide non-volatility without wear-out. Everspin MRAM stores information in magnetic material integrated with silicon circuitry to deliver the speed of SRAM with the non-volatility of Flash in a single unlimited-endurance device. Everspin MRAM devices are designed to combine the best features of non-volatile memory and RAM to enable "instant-on" capability and power loss protection for an increasing number of electronic systems.

Features:
- Non-Volatile: Data retention - ≥20 years
- Fast: Symmetrical read/write - 35ns
- Unlimited Endurance: Unlimited endurance - No wear-out mechanism
- Modular Integration: Easily integrated with CMOS
- Extended Temperatures: -40°C < T < 150°C operation demonstrated
- Highly Reliable: Intrinsic reliability exceeds 20 year lifetime at 125°C

Serial MRAM

These devices offers serial EEPROM and serial Flash compatible read/write timing with no write delays and unlimited read/write endurance. Unlike other serial memories, both reads and writes can occur randomly in memory with no delay between writes. They are the ideal memory solution for applications that must store and retrieve data and programs quickly using a small number of I/O pins.

Features:
- No write delays
- Block write protection
- Fast, simple SPI interface with up to 40MHz clock rate
- Automatic data protection on power loss
- Low current sleep mode
- Direct hardware replacement for serial EEPROM, Flash, FeRAM

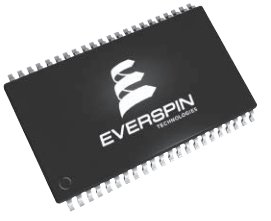
Parallel MRAM

These devices offers SRAM compatible 35 ns read/write timing with unlimited endurance. Data is always non-volatile for greater than 20-years. Data is automatically protected on power loss by low-voltage inhibit circuitry to prevent writes with voltage out of specification. They are ideal memory solution for applications that must store and retrieve critical data and programs quickly.



Features:
- SRAM compatible timing
- Unlimited read and write endurance
- Data always non-volatile for >20-years at temperature
- One memory that replaces FLASH, SRAM, EEPROM and BBSRAM in systems for simpler, more efficient designs
- Improves reliability by replacing battery-backed SRAM

GREENLIANT Parallel Flash Memory

RoHS Compliant This product is RoHS compliant.

27 AND 37 SERIES MTP (MANY-TIME PROGRAMMABLE) PARALLEL FLASH

The 27 & 37 Series of Many-Time Programmable (MTP) low cost flash, based on SuperFlash® technology. The split-gate cell design and thick oxide tunneling injector attain better reliability and manufacturability compared with alternate approaches. These MTP devices can be electrically erased and programmed at least 1000 times using an external programmer with a 12V power supply. They have to be erased prior to programming. These devices conform to JEDEC standard pinouts for byte-wide memories. Designed, manufactured, and tested for a wide spectrum of applications, these devices are offered with an endurance of at least 1000 cycles. Data retention is rated at greater than 100 years. They are suited for applications that require infrequent writes and low power nonvolatile storage. These devices will improve flexibility, efficiency, and performance while matching the low cost in nonvolatile applications that currently use UV-EPROMs, OTPs, and mask ROMs.

Features (GLS27 Series):

- 5.0V Read, 12.0V Program and Erase
- Same package and pin assignments as EPROM/OTP
- For use in cordless phones, VCD players, printers and fax machines where code is frozen and in-system programming is not required

Features (GLS37 Series):

- 2.7-3.6V Read, 12.0V Program and Erase
- Same package and pin assignments as standard flash
- For use in cordless phones, VCD players, printers and fax machines where code is frozen and in-system programming is not required

PLCC-32

29 SERIES SSF (SMALL-SECTOR FLASH) PARALLEL FLASH

The 29 Series SSF (Small-Sector Flash) devices are suited for applications that require convenient and economical updating of program, configuration, or data memory. For all system applications, they significantly improve performance and reliability, while lowering power consumption. They inherently use less energy during Erase and Program than alternative flash technologies. The total energy consumed is a function of the applied voltage, current, and time of application. Since for any given voltage range, the SuperFlash technology uses less current to program and has a shorter erase time, the total energy consumed during any Erase or Program operation is less than alternative flash technologies. They also improve flexibility while lowering the cost for program, data, and configuration storage applications.

Features (GLS29EE Series):

- 128 byte Sector-Erase
- Sector-by-sector Erase operations
- Byte-by-byte Program operations

Features (GLS29SF/VF Series):

- 128 byte page size
- Page-by-page Write operations
- Page-Write operation includes an internal Erase transparent to the external system

36 SERIES CSF (CONCURRENT SUPER FLASH) PARALLEL FLASH

The 36 Series CSF (Concurrent Super Flash) is a dual-bank flash memory device designed for wireless communication and consumer applications.
The dual-bank architecture supports the Concurrent Read-Write operation where the user may read from one bank while programming or erasing in the other bank.

Features:

- Dual-bank architecture for Concurrent Read-While-Write operations
- Operating voltage: 2.7-3.6V for Read and Write operations
- Hardware top or bottom sector protection
- Flexible Erase capability
- Factory and User programmable security ID
- Erase-Suspend/Erase Resume
- User selectable x8/x16 Data Bus through a BYTE# pin
- Hardware Write protection through WP# pin

TSOP-48

85 SERIES SATA FLASH NANDRIVE

The SATA NANDrive™ family extends Greenliant's portfolio of high-performance, fully integrated embedded solid state drives (SSDs). These managed NAND products integrate a Serial ATA controller and one or more NAND flash die in a multi-chip package. A built-in microcontroller and flash file management firmware replace the need for host-side Flash File System (FFS) and Memory Technology Driver (MTD) software. Compatible with the latest generation chipsets, SATA NANDrive products have the same footprint across all capacities for backward compatibility, simplifying system-level board design.

Features:

- Small Form Factor SATA Solid State Drive
- Industry Standard Serial ATA Interface
- Energy Efficient
- Multi-tasking Technology Increases Performance
- Pre-programmed Firmware in Embedded SuperFlash® Memory
- Robust Power Down Data Protection
- Bad Block Management
- Built-in ECC
- Advanced Data Security
- SSD Lifespan Monitoring
- Multiple Densities with Same Pin-out
- Commercial and Industrial Temperatures

COMPACTFLASH CARD CONTROLLER

The GLS55LC200 NAND Controller is the core of a high performance, flash media-based, data storage system. The controller recognizes the control, address, and data signals on the CF bus and translates them into memory accesses for standard NAND-type flash media. Using both Single Level Cell (SLC) and Multi-Level Cell (MLC) flash media, this technology supports solid state mass storage applications by offering new, expanded functionality while enabling smaller, lighter designs with lower power consumption. The NAND Controller supports standard CF protocols with up to PIO Mode-6, Multi-word DMA Mode-4, and Ultra DMA Mode-4 interface. The CF interface is widely used in products such as portable and desktop computers, digital cameras, music players, handheld data collection scanners, PDAs, handy terminals, personal communicators, audio recorders, monitoring devices, and set-top boxes.

Features:

- CompactFlash Association Specification Revision 3.0 standard
- Interface for standard NAND Flash media
- Low current operation
- Power management unit
- Flash Media Interface: Single or Dual 8-bit access
- Supports up to 4 flash media devices per channel
- Supports Single-Level Cell (SLC) or Multi-Level Cell (MLC) media 2K Byte and 4K Byte program page size
- 20-byte unique ID for enhanced security
- Programmable, multitasking NAND interface
- Firmware storage in Embedded SuperFlash®
- Pre-programmed Embedded Firmware
- Built-in Hardware ECC
- Built-in Internal System Clock
- Automatic recognition and initialization of Flash Media devices

UNI/O™ BUS SERIAL EEPROM FAMILY

♦ Surface Mount Device

Features: • Can support any data rate from 10kHz to 100kHz • The only 1Kbit, 2Kbit, 4Kbit, and 16Kbit EEPROMs available in SOT-23-3

For quantities greater than listed, call for quote.

I2C™ COMPATIBLE SERIAL EEPROM FAMILY

♦ Surface Mount Device

• Range of packages including 8MF, 8SM, 8SN, ST, 8MS, SOT, and wafer
• Maximum bus speed of 400kHz
• Operating temperature of -40°C to +85°C
• UL=1.5-3.6V, AA=1.8-5.5V, LC=2.5-5.5V

For quantities greater than listed, call for quote.

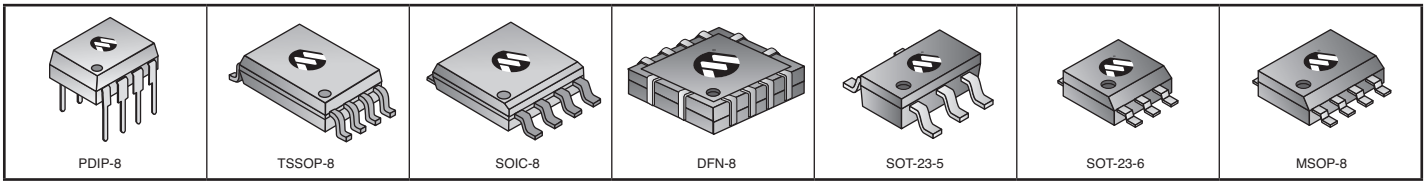
MICROCHIP Serial EEPROMs



SPI™ COMPATIBLE SERIAL EEPROM FAMILY

Features:

- Range of packages including 8MF, 8SM, 8SN, ST, 8MS, and wafer
- Operating temperature of -40°C to +85°C
- Maximum bus speed of 3-10MHz
- AA=1.8-5.5V, LC=2.5-5.5V

♦Surface Mount Device

34XX02 SERIAL EEPROM

Features:

- Range of packages including PDIP-8, SOIC-8, TSSOP-8, MSOP-8, and DFN-8
- Operating temperature of -40°C to +125°C
- Maximum Clock Frequency: AA = 400kHz, LC = 1MHz
- Operating Voltage Range: AA = 1.7-5.5V, LC = 2.2-5.5V

25 SERIES SERIAL FLASH

♦ Surface Mount Device

SPI Serial Flash is small, low-power flash memory that features Serial Peripheral Interface (SPI) and pin-for-pin compatibility with industry-standard SPI EEPROM devices. Its small footprint reduces ASIIC controller pin-count and packaging costs, saves board space, and keeps system costs down. Lower power consumption than standard flash and fewer wires than parallel flash; SPI Serial Flash is the ideal cost-efficient, data transfer solution. Microchip's CMOS SuperFlash® technology boosts data retention and endurance, reduces erase time and power consumption, making Microchip serial flash ideal for portable designs.

Features:

- Endurance: 100,000 cycles (typical)
- Greater than 100 years data retention
- Fast Sector-Erase or Block-Erase time: 18ms (typical)
- Byte program time: 7uA (typical)
- Active Read Current: 10mA (typical)
- Standby Current: 8uA (typical)

Applications:

- HD DVD
- HDTV
- Bluetooth
- MP3 players
- DSL and cable modems
- Optical disk drives
- Hard disk drives
- PC BIOS
- Printers
- Zigbee
- Wireless LAN
- LCD monitors
- Digital radios
- Set-top boxes

RoHS Compliant

26 SERIES SERIAL FLASH

♦ Surface Mount Device

Microchip's 26 Series boosts performance while maintaining the compact form factor of standard serial devices. Utilizing Serial Quad Interface (SQI) and operating at frequencies reaching 80 MHz, the 26 Series is a perfect choice for Bluetooth headsets, optical disk drives and GPS applications. The 26 Series SQI flash memories are manufactured with Microchip's proprietary, high performance CMOS SuperFlash® Technology, significantly improving performance and reliability while lowering power consumption. For cutting edge designs requiring high bandwidth and compact layout, the 26 Series is an ideal solution.

Features:

- High speed clock frequency: 80MHz Max
- 4-bit multiplexed I/O's with SPI-like serial command structure
- SPI protocol support for Read, High Speed Read and JEDEC ID Read
- Burst Read: 8, 16, 32, 64 byte burst with wrap around
- Index Jump: Reduce number of input clocks for faster data access
- Write Suspend and Resume: Suspend Program or Erase operation
- Individual Block Locking: 64KB blocks with 8x8KB parameter blocks
- Write protection through Block-Protection bits in status register
- One Time Porgrammable (OTP) 256-bit Secure ID

Applications:

- Bluetooth Headsets
- Optical disk drives
- GPS
- Portable Media Devices
- Digital Video Recorder
- Blu-Ray
- Hard Disk Drives

RoHS Compliant

39 SERIES MPF (MULTI-PURPOSE FLASH) PARALLEL FLASH

♦ Surface Mount Device

The 39 Series MPF (Multi-Purpose Flash) are manufactured with Microchip's proprietary, high performance CMOS SuperFlash® technology. The split-gate cell design and thick oxide tunneling injector attain better reliability and manufacturability compared with alternate approaches.To protect against inadvertent write, they have on-chip hardware and Software Data Protection schemes. Designed, manufactured, and tested for a wide spectrum of applications, these devices are offered with a guaranteed typical endurance of 10,000 cycles. Data retention is rated at greater than 100 years. They are suited for applications that require convenient and economical updating of program, configuration, or data memory. For all system applications, they significantly improve performance and reliability, while lowering power consumption. They inherently use less energy during erase and program than alternative flash technologies. The total energy consumed is a function of the applied voltage, current, and time of application. Since for any given voltage range, the SuperFlash technology uses less current to program and has a shorter erase time, the total energy consumed during any Erase or Program operation is less than alternative flash technologies.

RoHS Compliant

Features:

- 50% smaller than competition's 6mm x 8mm BGA packages
- Industry's smallest 1.8V packages for 8M-bit products
- Thinnest standard flash package in the industry
- Best total-cost solution for price sensitive, fast to market applications
- JEDEC approved packages
- For applications requiring high performance features such as set-top boxes, PDAs, digital cameras and networking equipment

For quantities greater than listed, call for quote.

For all system applications, they significantly improve performance and reliability, while lowering power consumption. They inherently use less energy during erase and program than alternative flash technologies. The total energy consumed is a function of the applied voltage, current, and time of application. Since for any given voltage range, the SuperFlash technology uses less current to program and has a shorter erase time, the total energy consumed during any Erase or Program operation is less than alternative flash technologies.

Features:

- 50% smaller than competition's 6mmx8mm BGA packages
- Industry's smallest 1.8V packages for 8M-bit products
- Thinnest standard flash package in the industry
- Best total-cost solution for price sensitive, fast to market applications
- JEDEC approved packages
- For applications requiring high performance features such as set-top boxes, PDAs, digital cameras and networking equipment

38 SERIES ADVANCED MPF+ (MULTI-PURPOSE FLASH PLUS) PARALLEL FLASH

♦ Surface Mount Device

The 38 Series Advanced MPF+ (Multi-Purpose Flash Plus) is a family of high-performance, parallel flash memories that feature data protection capabilities as well as fast program, erase and read times. These high speed operations enable quick boot times and field updates, resulting in better end-user experiences. These capabilities also provide higher through out in manufacturing lines that use in-system programming of the flash. The data protection features of the Advanced MPF+ family prevent unauthorized data changes, ensuring that content stored on the flash memory is secure. These are ideal for applications that need high performance or require integrity of data and services. Available in standard packages with compatible pinouts, this family of devices also offers the benefits of SuperFlash® technology; high performance, low power and reliability.

Features:

- Page Read
  - 25ns/word (max) page read access time
  - 4-Word page read buffer
- Write-Buffer Programming
  - 2.5µs/word (max) programming time (full buffer)
  - 16-Word write buffer
- Protection/Security
  - 128-bit unique ID
  - 256-Word user programmable SEC ID area
  - Individual block protection
  - Irreversible block lock
  - Boot-block options
- SuperFlash® Technology
  - Endurance, 100,000 cycles (minimum)
  - Greater than 100 years data retention
  - Fast Sector-Erase and Block-Erase time: 25ms (maximum)
  - Low Power

49 SERIES LPC (LOW PIN COUNT) FIRMWARE FLASH/FIRMWARE HUB

♦ Surface Mount Device

The 49 Series LPC (Low Pin Count) Firmware Flash/Firmware Hub is a family of flash memories designed for system code and data storage. It complies with the Intel LPC Interface specification supporting multi-byte Firmware Memory and single-byte LPC Memory cycle types. The low pin count interface allows ASIC host controllers to have more free pins resulting in lower overall system costs. These products are ideally suited for embedded systems and processor applications. Available in an array of package and density combinations, this family of devices also offers all the benefits of SuperFlash® technology; high performance, low power and reliability.

Features:

- Intel Support
  - Compliant with Intel low Pin Count (LPC) Interface specification 1.1
  - Compatiable with Intel 82802 Firmware Hub (FWH) component
- High Bandwidth
  - Up to 33MHz operating frequency
  - Parallel Programming (PP) for fast production programming
  - Unique features for 16Mbit devices
  - 128-byte burst programming
  - Up to 15.6MB/s data transfer rate
  - Auto Address Increment (AAI)
- Protection Security
  - 256-bit secure ID space
  - Boot block operations
  - Hardware write protection
- SuperFlash® Technology
  - Endurance, 100,000 cycles (minimum)
  - Greater than 100 years data retention
  - Fast Sector-Erase and Block-Erase time: 25ms (maximum)
  - Low Power

CATALYST I²C BUS (2-WIRE) LOW STANDBY CURRENT, PARTIAL ARRAY WRITE PROTECTION

Features:

- 16-Byte Page Write Buffer
- Hardware Write Protection for entire memory
- Software Write Protection for lower 128 Bytes
- Schmitt Triggers and Noise Suppression Filters on I²C Bus Inputs (SCL and SDA)
- Low power CMOS technology
- 1,000,000 program/erase cycles
- 100 year data retention

RoHS Compliant

CATALYST I2C BUS (2-WIRE) CASCADABLE SERIAL EEPROM

Features:

- 16-Byte Page Write Buffer
- Hardware Write Protection for Entire Memory
- Schmitt Triggers and Noise Suppression Filters on I²C Bus Inputs (SCL and SDA)
- Low Power CMOS Technology
- 1,000,000 Program/Erase Cycles
- 100 Year Data Retention

RoHS Compliant

CATALYST DUAL PORT SERIAL CMOS EEPROM

The CAT24C208 is an 8 kb Dual Port Serial CMOS EEPROM internally organized as 4 segments of 256 bytes each. The CAT24C208 features a 16-byte page write buffer and can be accessed from either of two separate I2C compatible ports, DSP (SDA, SCL) and DDC (SDA, SCL). Arbitration between the two interface ports is automatic and allows the appearance of individual access to the memory from each interface.

Features:

- Supports Standard and Fast I2C Protocol
- 2.5V to 5.5V Supply Voltage Range
- 16-Byte Page Write Buffer
- Schmitt Triggers and Noise Suppression Filters on I2C Bus Inputs
- Low Power CMOS Technology
- 1,000,000 Program/Erase Cycles
- 1 Year Data Retention

RoHS Compliant

CATALYST MICROWIRE BUS (3-WIRE)

These Microwire Serial EEPROMs are configured as either registers of 16 bits (ORG pin at VCC) or 8 bits (ORG pin at GND). Each register can be written (or read) serially by using the DI (or DO) pin. They are manufactured using Catalyst's advanced CMOS EEPROM floating gate technology. The devices are designed to endure 1,000,000 program/erase cycles and has a data retention of 100 years.

Features:

- High speed operation: 1MHz
- Low power CMOS technology
- 1.8 to 6.0 volt operation
- Selectable x8 or x16 memory organization
- Self-timed write cycle with auto-clear
- Hardware and software write protection
- Power-up inadvertant write protection
- 1,000,000 Program/erase cycles
- 100 year data retention
- Sequential read

RoHS Compliant

CATALYST SPI BUS WITH LOW STANDBY CURRENT (MOTOROLA COMPATIBLE)

These SPI Serial CMOS EEPROMs use Catalyst's advanced CMOS Technology that substantially reduces device power requirements. They operate via the SPI bus serial interface and is enabled though a Chip Select (CS). In addition to the Chip Select, the clock input (SCK), data in (SI) and data out (SO) are required to access the device. The HOLD pin may be used to suspend any serial communication without resetting the serial sequence.

Features:

- 10MHz SPI compatible
- 1.8 to 5.5 volt operation
- Hardware and software protection
- Low power CMOS technology
- SPI modes (0,0 & 1,1)
- 1,000,000 program/erase cycles
- 100 year data retention
- Self-timed write cycle
- 16-byte page write buffer
- Block write protection – Protect 1/4, 1/2 or all of EEPROM array

RoHS Compliant

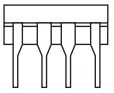
SEIKO INSTRUMENTS EEPROMs, RTC and Logic

SII

RoHS Compliant This product is RoHS compliant.

S-24CXX SERIES: 2-WIRE BUS SERIAL EEPROMS

DIP-8



The Seiko S-24Cxx Series are 2-wire bus serial EEPROMs characterized by low power consumption and wide operating voltage. Each is capable of page write and sequential read.

Specifications:
- Low power consumption: Standby: 2.0uA Max (Vcc = 5.5V)
  Read: 0.8mA Max (Vcc = 5.5V)
- Operating voltage range: Read: 1.8 to 5.5V (at -40°C to +85°C)
  Write: 2.7 to 5.5V (at -40°C to +85°C)
- Operating frequency: 400kHz (Vcc=5 V±10 %, at -40°C to +85°C)
- Write disable function when power supply voltage is low
- Endurance: 100,000,000 cycles/word (at +25°C) write capable
  10,000,000 cycles/word (at +85°C)
  3x1,000,000 cycles/word (at +105°C)

RoHS Compliant

For quantities greater than listed, call for quote.

S-93CXX SERIES: 3-WIRE BUS SERIAL EEPROMS

TSSOP-8

The Seiko S-93Cxx Series are high speed, low power EEPROMs with a wide operating voltage range. Each is capable of sequential read, at which time addresses are automatically incremented in 16-bit blocks. The instruction code is compatible with the NM93CS46/56/66 Series.

Specifications:
- Low current consumption: Standby: 1.5 uA Max (Vcc = 5.5V)
  Operating: 0.8 mA Max (Vcc = 5.5V)
  0.4 mA Max (Vcc = 2.5V)
- Operating voltage range: Read: 1.8 to 5.5V (at -40°C to +85°C)
  Write: 2.7 to 5.5V (at -40°C to +85°C)
- Write disable function when power supply voltage is low
- Function to protect against write due to erroneous instruction recognition
- Endurance: 10,000,000 cycles/word (at +85°C)
  3x1,000,000 cycles/word (at +105°C)
  100,000,000 cycles/word (at +25°C)
- Data retention: 10 years (after 10,000,000 cycles/word at +85°C)

RoHS Compliant

For quantities greater than listed, call for quote.

REAL TIME CLOCKS (RTC), SURFACE MOUNT

SOP-8
SOP2-8

The S-35190A and S-35390A are low-current-consumption CMOS real-time clock ICs that feature a wide operating voltage range (1.3V to 5.5V) and can be driven on a variety of supply voltages, from a main supply to a backup supply. The time keeping current consumption of 0.25μA and minimum time keeping operation voltage of 1.1V enable greatly increased battery duration.

Specifications:
- Low current consumption: Standby: 1.5uA Max (Vcc = 5.5V)
- Wide operating range: 1.3 to 5.5V
- Minimum time keeping operation voltage: 1.1V
- Built-in clock adjustment function
- Built-in free user register
- Built-in alarm interrupter
- Built-in flag generator at power down or power on
- Auto calendar up to the year 2099, automatic leap year calculation function
- Built-in constant voltage circuit
- Built-in 32kHz crystal oscillator (Cd built in, Cg external)

RoHS Compliant

For quantities greater than listed, call for quote.

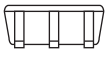
SINGLE GATE MINI-LOGIC, SURFACE MOUNT

S-75V Series (High Speed)

SC-88A



The S-75V series is a single gate fabricated by utilizing advanced silicon-gate CMOS technology which provides the inherent benefit of CMOS low power consumption to achieve ultra high speed operation correspond to LSTTL IC' s. Input voltage is allowed to be applied even if power voltage is not supplied because no diode is inserted between an input pin and VCC. This allows for interfaces between power supplies of different voltage, output level conversion from 5V to 3V and battery backup applications.

Specifications:
- Supply voltage: 2.0 to 5.5V
- Operating temperature: -40°C to +85°C
- Output current: +/- 25mA
- Propagation delay time: 3.5ns @ 5V

Applications:
- Personal computers, peripherals
- Cell phones
- Cameras
- Games

RoHS Compliant

For quantities greater than listed, call for quote.

S-75L Series (Low Voltage)

The S-75L series is a single gate fabricated by utilizing advanced silicon-gate CMOS technology which provides the inherent benefit of CMOS low power consumption to achieve operation by only a couple of batteries (1 to 3V). Input voltage is allowed to be applied even if power voltage is not supplied because no diode is inserted between an input pin and VCC. This allows for interfaces between power supplies of different voltage, output level conversion from 3V to 1V and battery backup applications.

Specifications:
- Supply voltage: 1.0 to 3.6V
- Operating temperature: -40°C to +85°C
- Output current: +/- 12.5mA
- Propagation delay time: 7ns @ 3V

Applications:
- Personal computers, peripherals
- Cell phones
- Cameras
- Games

RoHS Compliant

AMD BOOT/UNIFORM MEMORY FLASH

The Spansion F NOR Flash memory family is available in densities of 1 Mb through 32 Mb. Each device requires only a single 5V power supply for read and write functions and is entirely command set compatible with the JEDEC Flash standards. The Spansion F NOR Flash memory is one of the longest-supported Flash memories in the industry.

For quantities greater than listed, call for quote.

MIRRORBIT® ECLIPSE FLASH NON-VOLATILE MEMORY

The Spansion® S29GL01G/512/256/128S are MirrorBit Eclipse flash products fabricated on 65nm process technology. These devices offer a fast page access time as fast as 15 ns with a corresponding random access time as a Write Buffer that allows a maximum of 256 words/512 bytes to be programmed in one programming time than standard programming algorithms. This makes these devices ideal for today's embedded applications that require higher density, better performance and lower power consumption.

For quantities greater than listed, call for quote.

PAGE-MODE INTERFACE FLASH MEMORY

The S29GL-N family of devices are 3.0-Volt single-power Flash memory manufactured using 110nm MirrorBit technology with Page-Mode interface. The S29GL032N is a 32-Mb device organized as 2,097,152 words or 4,194,304 bytes. Depending on the model number, the devices have an 8-bit wide data bus only, 16-bit wide data bus only, or a 16-bit wide data bus that can also function as an 8-bit wide data bus by using the BYTE# input. The devices can be programmed either in the host system or in standard EPROM programmers.
The S29AL032D is a 32-megabit, 3.0 volt-only flash memory device, organized as 2,097,152 words of 16 bits each or 4,194,304 bytes of 8 bits each. Word mode data appears on DQ0-DQ15; byte mode data appears on DQ0-DQ7. The device is designed to be programmed in-system with the standard 3.0 volt VCC supply, and can also be programmed in standard EPROM programmers.

For quantities greater than listed, call for quote.

SERIAL PERIPHERAL INTERFACE (SPI) PRODUCTS

The new 3.0 volt Spansion® S25FL Flash memory family with Serial Interface is designed to reduce costs and dramatically simplify system design of consumer electronics and PC peripherals such as hard disk drives, optical drives, printers, cordless phones, DSL/cable modems, and DVD players and recorders.

DUAL INTERFACE EEPROMS

Dual Interface EEPROMs from STMicroelectronics are an innovative family of memories that provides new features and capabilities. The EEPROM memory bank can be accessed either by a standard I²C interface or by an ISO 15693 RF interface. The ISO 15693 RF interface is based on a passive RFID technology that does not require a battery or power to operate, as it gets both the energy and the data stream from the RF reader.

EVALUATION KITS AND BOARDS

ST provides tools for system designers to help determine the remote operating distance they can expect from the device and the impact of the reader antenna, as well as impact of reader and IC antenna sizes on the overall system performance. They also allow evaluation of interaction of I2C and RF modes, entire memory, partitioning, lock mechanisms and password protection. All tools come with an I²C programmer, an RF reader, two different M24LR64 reference antennas with I²C connector. Connections to host computers are USB based.

ZEROPOWER® NON-VOLATILE RAMS

ZEROPOWER® NVRAMs combine Low Power SRAMs and Automatic Battery Switchover and Write Protect circuits to implement Non-Volatile RAMs. They can be used just like standard SRAMs, but retain their contents when power is removed. Densities range from 16Mbits down to 16Kbits.

For quantities greater than listed, call for quote.

TIMEKEEPER® NON-VOLATILE RAMS

TIMEKEEPER® NVRAMs build on ST's ZEROPOWER® NVRAMs by adding non-volatile Real-Time Clocks. The Automatic Battery Switchover and Write Protect circuits are extended to the RTC section where counter-registers keep track of year, month, day, date, hours, minutes, and seconds. A low-power 32KHz oscillator provides the timing. It is optimized to draw only a tiny amount of current - as low as 40nA - so it adds only a small additional load to the battery. The RTC registers are mapped into the LPSRAM. Eight to 16 bytes of the LPSRAM are replaced by the RTC registers. The day, date, and time are read and written just like RAM locations.

For quantities greater than listed, call for quote.

ALTERA CPLDs

MAX V

MAX V architecture integrates previously external functions, such as flash, RAM, oscillators, and phase-locked loops

Features:
- Flash Memory: 8192 bits

For quantities greater than listed, call for quote.

LATTICE Programmable Logic Devices

LATTICE SEMICONDUCTOR

Products may be RoHS compliant. Check mouser.com for RoHS status.

LATTICE ISPMACH 4A CPLDS

The 5Volt ispMACH 4A5 family of CPLDs supports logic macrocell densities from 32 to 256 and I/O counts from 32 to 128. The ispMACH4A5 family delivers up to 5ns SpeedLocked performance (Tpd) and operating frequencies up to 182MHz. The ispMACH 4A5 family offers more programmable logic density and I/O solutions than any other CPLD family in the industry. This breadth of this family, combined with its SpeedLocked performance and low power consumption, make it the best choice for most system logic applications.

LATTICE PROGRAMMABLE LOGIC DEVICES (CPLDS)

The MachXO family of non-volatile infinitely reconfigurable Programmable Logic Devices (PLDs) is designed for applications traditionally implemented using CPLDs or low-density FPGAs. Widely adopted in a broad range of applications that require general purpose I/O expansion, interface bridging and power-up management functions, MachXO PLDs offer the benefits of increased system integration by providing embedded memory, built-in PLLs, high performance LVDS I/O, remote field upgrade (TransFRTM technology) and a low power sleep mode, all in a single-device. Designed for a broad range of low density applications including system control designs, the MachXO PLD family is used in a variety of end markets including consumer, automotive, communications, computing, industrial and medical.

PLATFORM MANAGER

The Platform Manager™ product family represents the third-generation of mixed-signal devices available from Lattice. Programmable Platform Manager devices simplify board management design significantly by integrating programmable analog and logic to support many common functions, such as power management, digital housekeeping and glue logic. By integrating these support functions, Platform Manager devices not only reduce the cost of these functions compared to traditional approaches, but also improve system reliability and provide a high degree of design flexibility that minimizes the risk of circuit board re-spins.

POWER MANAGER PACPOWR CPLD DEVICES

NEW PRODUCT

The new Power Manager II device ispPAC-POWR607 includes a power-down feature, which is ideal for applications with very low standby power requirements. The device can either be powered down using an external logic signal or by an internally generated signal. Once in the powered down state the device draws less than 10A from the power supply.

For quantities greater than listed, call for quote.

LATTICE FPGAs and Development Kits

RoHS Compliant **This product is RoHS compliant.**

LATTICEECP2/M FAMILY FPGAS

ECP2 Family FPGAs

The LatticeECP2/M family of FPGA devices is optimized to deliver high performance features such as advanced DSP blocks, high speed SERDES (LatticeECP2M family only) and high speed source synchronous interfaces in an economical FPGA fabric. This combination was achieved through advances in device architecture and the use of 90nm technology.

The LatticeECP2/M FPGA fabric is optimized with high performance and low cost in mind. The LatticeECP2/M devices include LUT-based logic, distributed and embedded memory, Phase Locked Loops (PLLs), Delay Locked Loops (DLLs), pre-engineered source synchronous I/O support, enhanced sysDSP blocks and advanced configuration support, including encryption ("S" versions only) and dual boot capabilities.

LatticeECP3 Family FPGAs

The LatticeECP3 family, is the third generation high value FPGA from Lattice Semiconductor, which offers the industry's lowest power consumption and price of any SERDES-capable FPGA device. The LatticeECP3 FPGA family offers multi-protocol 3.2G SERDES with XAUI jitter compliance, DDR3 memory interfaces, powerful DSP capabilities, high density on-chip memory and up to 149K LUTS, all with half the power consumption and half the price of competitive SERDES-capable FPGAs. The entire LatticeECP3 family is manufactured using Fujitsu's advanced low power process technology.

LATTICEECP3 AMC EVALUATION BOARD

The LatticeECP3 AMC Evaluation Board allows designers to investigate and experiment with the features of the LatticeECP3 high-speed SERDES transceivers in an advanced mezanine card (AMC) system environment. The features of the LatticeECP3 AMC Evaluation Board assist engineers with rapid prototyping and testing of their designs. The board follows portions of the PICMG AMC R2.0 AMC form-factor specification that allows users the capability to use the board in live system evaluations.

ICE40 MobileFPGA Family

The iCE40™ Los Angeles mobileFPGA™ family is designed for sensor management, video and imaging, custom connectivity and memory/storage expansion for Custom Mobile Device™ solutions. Fabricated on a 40-nm low-power, standard CMOS process, the Los Angeles family has been optimized for mobile consumer applications such as smartphones, tablets, digital still cameras (DSCs), e-book readers, and portable navigation devices (PNDs). The Los Angeles family comes in two power/performance variants:

- LP Series Smartphone – Targeted series optimized for low power
- HX Series Tablet – Targeted series optimized for higher performance

Lattice XP Family

The LatticeXP family of FPGA devices combine logic gates, embedded memory and high performance I/Os in a single architecture that is both non-volatile and infinitely reconfigurable to support cost-effective system designs. The re-programmable non-volatile technology used in the LatticeXP family is the next generation ispXP™ technology. With this technology, expensive external configuration memories are not required and designs are secured from unauthorized read-back. In addition, instant-on capability allows for easy interfacing in many applications.

TOSHIBA Standard Logic ICs

RoHS Compliant **This product is RoHS compliant.**

STANDARD LOGIC ICS

Toshiba offers ICs for all types of logic design needs in today's highly sophisticated products. Our available logic devices support voltage ranging from as low ad 1.2V to as high as 18V. Our high-speed low-voltage logic family also offers 5V-tolerant inputs and outputs with very low propagation delays. Our logic device products are available in many package types and sizes, making them highly suitable for today's applications where light weight, compact size, and high-efficiency are of the utmost importance.

NEW PRODUCT

MOUSER STOCK NO.	Toshiba Part No.	Package	Description	Operating Supply Voltage	Price Each		
					1	10	100
757-TC74HC08AP(F,M)	TC74HC08AP(F,M)	DIP-14	Quad 2-Input AND Gate	2V to 6V	.34	.30	.246
757-TC74HC14AP(F,M)	TC74HC14AP(F,M)	DIP-14	Hex Schmitt Inverter	2V to 6V	.54	.428	.30
757-TC74HC4066AFTELM	TC74HC4066AFTELM	TSSOP-14	Quad Bilateral Switcher	2V to 12V	.27	.214	.182
757-TC74HC541AP(F)	TC74HC541APF	PDIP-20	Octal Bus Buffer (3-State, Inverted)	2V to 6V	.41	.321	.278
757-TC74LCX125FTEK2M	TC74LCX125FT(EK2,M	TSSOP-14	Quad Bus Buffer (3-State)	2V to 3.6V	.54	.428	.364
757-TC74LCX14FTEK2,M	TC74LCX14FTEK2,M	TSSOP-14	Hex Schmitt Inverter	2V to 3.6V	.32	.257	.225
757-TC74LCX540FTELKM	TC74LCX540FT(ELK,M	TSSOP-20	Octal Bus Buffer (3-State, Inverted)	2V to 3.6V	.75	.599	.514
757-TC74LCX541FTELKM	TC74LCX541FTELKM	TSSOP-20	Octal Bus Buffer (3-State)	-0.5V to 7V	.36	.289	.246
757-TC74LCX573FTELKM	TC74LCX573FT(ELK,M	TSSOP-20	Octal D-Type Latch (3-State)	2V to 3.6V	.75	.599	.514
757-TC74LVX244FTELKM	TC74LVX244FTELKM	TSSOP-20	Octal Bus Buffer (3-State)	2V to 3.6V	.45	.353	.31
757-TC74VHC04FTEK2,M	TC74VHC04FTEK2,M	TSSOP-14	Hex Inverter	0V to 5.5V	.27	.214	.182
757-TC74VHC08FTEK2,M	TC74VHC08FTEK2,M	TSSOP-14	Quad 2-Input AND Gate	0V to 5.5V	.27	.214	.182
757-TC74VHC14FTEK2M	TC74VHC14FTEK2M	TSSOP-14	Hex Schmitt Inverter	0V to 5.5V	.19	.156	.134
757-TC74VHC165FTEK2M	TC74VHC165FT(EK2,M	TSSOP-16	8-Bit Parallel-In/Serial-Out Shift Register	0V to 5.5V	.51	.407	.353
757-TC74VHC244FTELKM	TC74VHC244FT(ELK,M	TSSOP-20	Octal Bus Buffer (3-State)	0V to 5.5V	.33	.268	.225
757-TC74VHC245FEL,KF	TC74VHC245FEL,K,F	SOP20	Octal Bus Transceiver (3-State)	0V to 5.5V	.70	.556	.482
757-TC74VHC245FTELKM	TC74VHC245FTELKM	TSSOP-20	Octal Bus Transceiver (3-State)	0V to 5.5V	.57	.449	.385
757-TC74VHC4040FTEK2	TC74VHC4040FT(EK2M	TSSOP-16	12-Stage Ripple-Carry Binary Counter/Dividers	0V to 5.5V	.57	.449	.385
757-TC74VHC541FTELKM	TC74VHC541FTELKM	TSSOP-20	Octal Bus Buffer (3-State)	0V to 5.5V	.36	.289	.246
757-TC74VHC574FTELKM	TC74VHC574FTELKM	TSSOP-20	Octal D-Type Flip-Flop (3-State)	0V to 5.5V	.57	.449	.385
757-TC74VHC595FT(EK2	TC74VHC595FT(EK2,M)	TSSOP-16	8-Bit Shift Register	2V to 5.5V	.70	.556	.482
757-TC74VHC74FTEK2,M	TC74VHC74FTEK2,M	TSSOP-14	Dual D-Type Flip-Flop with Preset and Clear	0V to 5.5V	.27	.214	.182
757-TC7MB3125CFK-ELM	TC7MB3125CFK-EL(M)	TSSOP-14	Low Voltage CMOS	4V to 5.5V	.64	.599	.535
757-TC7MB3125CFT-ELM	TC7MB3125CFT-EL(M)	VSSOP-14	Low Voltage CMOS	4V to 5.5V	.64	.599	.535
757-TC7MB3245CFK-ELM	TC7MB3245CFK-EL(M)	TSSOP-20	Low Cap Octal	4V to 5.5V	.67	.629	.562
757-TC7MB3245CFT-ELM	TC7MB3245CFT-EL(M)	VSSOP-20	Low Cap Octal	4V to 5.5V	.67	.629	.562
757-TC7MB3257CFK-ELM	TC7MB3257CFK-EL(M)	TSSOP-16	Low Cap Quad	4V to 5.5V	.67	.629	.562
757-TC7MB3257CFT-ELM	TC7MB3257CFT-EL(M)	VSSOP-16	Low Cap Quad	4V to 5.5V	.64	.599	.535
757-TC7MBL3257CFK-EL	TC7MBL3257CFK-EL	TSSOP-16	4-Bit Multi Demultiplexer	1.65V to 3.6V	.64	.599	.535
757-TC7MP01FK(EL)	TC7MP01FK(EL)	US-16	Low-Voltage Triple Gate(6-input AND + 4-input OR + inverter)	1.65V to 3.6V	.62	.492	.428
757-TC7MP245FK(EL)	TC7MP245FK(EL)	US-20	Low consumption current type bi-directional buffer	1.65V to 3.6V	.91	.728	.621
757-TC7MP3125FK(EL)	TC7MP3125FK(EL)	US-16	Dual supply 4-bit bi-directional transceiver	1.1V to 2.7V	1.18	.995	.888
757-TC7MP3125FTG(EB)	TC7MP3125FTG(EB	VQON-16	Dual supply 4-bit bi-directional transceiver	1.1V to 2.7V	1.07	.856	.728
757-TC7MPH3125FK(EL)	TC7MPH3125FK(EL)	US-16	Dual supply 4-bit bi-directional transceiver with bushold	1.1V to 2.7V	.91	.728	.621
757-TC7MPS3125FTG(EB	TC7MPS3125FTG(EB)	VQON-16	Dual supply 4-bit bi-directional transceiver	1.1V to 2.7V	.91	.728	.621
757-TC7SB3157CFUT5LF	TC7SB3157CFU(T5L,F	SSOP-6	Digital IC CMOS	1.65V to 5.5V	.48	.449	.401
757-TC7S04FUTE85LF	TC7S04FU(TE85L,F)	USV-5	2-Input, High Speed, Inverter	2V to 6V	.16	.15	.139

ALD Precision Analog ICs & Energy Harvesting Modules

ADVANCED LINEAR DEVICES INC

RoHS Compliant This product is RoHS compliant.

SINGLE/DUAL CMOS ANALOG RC TIMERS

• Improved accuracy and temperature stability • High speed operation - 2.5MHz typical oscillation at 5V • High Discharge Sinking Current of 80mA at 5V

CRYPTO AUTHORIZATION DEVELOPMENT BOARDS

Features:

- Microprocessor: AVR AT90USB1287
- In-system Self-programmable Flash: 128Kb
- EEPROM: 4Kb
- Internal SRAM: 8Kb
- CryptoCompanion IC: AT88SC018
- USB Software Interface for Device Firmware
- Interface: JTAG, USB, UART, SPI, TWI
- I/O Pins: 10
- System Clock: 16MHz Crystal

CIRRUS LOGIC Analog ICs

RoHS Compliant **This product is RoHS compliant.**

AUDIO COMPONENTS

Cirrus Logic enjoys a long-standing reputation as a leader in innovative audio ICs. Cirrus Logic's portfolio of products includes audio converters such as analog-to-digital converter ICs (ADCs), digital-to-analog converter ICs (DACs), CODECs, S/PDIF receivers, Class-D amplifier solutions as well as audio-optimized digital signal processors (DSPs).

A/D Converters (ADCs)

CRYSTAL LAN® TRANSCEIVER AND INTERFACE

The CS8952 uses CMOS technology to deliver a high-performance, 100Base-X/10Base-T physical layer (PHY) line interface. It makes use of an adaptive equalizer optimized for noise and near-end crosstalk (NEXT) immunity to extend receiver operation to cable lengths exceeding 160 meters. In addition, the transmit circuitry has been designed to provide extremely low transmit jitter (<400 ps) for improved link partner performance. Transmit driver common mode noise has been minimized to reduce EMI (electromagnetic interference) for simplified FCC certification.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Cirrus Logic Part No.	Package Type	Media Supported	Digital Interference	Number Of Channels	Max Current Codnsumption	Power Supply (V)	Operating Temp. (°C)	Price Each 1	25	100

CRYSTAL LAN® EMBEDDED ETHERNET CONTROLLER

The CS8900A is a low-cost Ethernet LAN Controller optimized for the Industry Standard Architecture (ISA) bus and general purpose microcontroller busses. Its highly-integrated design eliminates the need for costly external components required by other Ethernet controllers. The CS8900A includes on-chip RAM, 10BASE-T transmit and receive filters, and a direct ISA-Bus interface with 24mA Drivers.

For quantities greater than listed, call for quote.

AUDIO DIGITAL SIGNAL PROCESSORS (DSP)

Complementing Cirrus Logic's strength in analog and mixed-signal technologies, Cirrus Logic provides numerous 24-bit and 32-bit processor solutions ideally designed for audio and industrial markets. Cirrus Logic's processor solutions include audio-optimized digital signal processors (DSP's) for a wide range of consumer, professional and automotive entertainment applications. In addition, Cirrus Logic's CobraNet products provide complete solutions for delivering uncompressed, professional-grade digital audio over standard ethernet networks.

For quantities greater than listed, call for quote.

COBRANET™ INTERFACE ICs AND PROCESSORS

CobraNet technology is the defacto standard for transporting high fidelity, uncompressed digital audio in real time over off-the-shelf switched Ethernet networks. Dynamically routes digital audio from various sources to one, some or all opints in a network of devices.

For quantities greater than listed, call for quote.

CYPRESS Clock Generators, Sensor, SOC & Transceiver

RoHS Compliant **This product is RoHS compliant.**

CLOCK GENERATORS

Cypress's broad portfolio of silicon-based clock generators and buffers offers the best in class performance in jitter, power, speed, integration, and package. The portfolio includes single- and multi-PLL programmable clock synthesizers, programmable skew, programmable XO, VCXO, EMI reduction clocks, zero delay, and fanout buffers.

EMI Reduction

Cypress's proprietary spread spectrum clock technology helps reduce system EMI without needing mechanical solutions such as shielding and ferrite beads. Cypress's spread spectrum clock generators have configurable spread percentages as well as linear and Lexmark modulation profiles to optimize system performance.

For quantities greater than listed, call for quote.

CAPACITIVE BUTTON CONTROLLER

The CY8CMBR2044 incorporates several innovative features to save time, money, and can quickly enable a capacitive touch sensing UI in your next design. It does not require any software tools or coding because system configuration is done using hardware. These features enable a broader audience of designers to implement capacitive buttons without learning new tool sets and developing code. In addition, this device is enabled with Cypress's revolutionary SmartSense auto tuning algorithm. SmartSense ends the need to manually tune the UI during development as well as the required retuning during production ramp. This saves valuable engineering time, test time, production yield loss, and speeds the time to volume.

For quantities greater than listed, call for quote.

WIRELESSUSB™ NL DEVELOPMENT KIT

The CY3668 WirelessUSB NL development kit provides a generic platform for developing wireless applications based on the WirelessUSB NL, enCoRe II and enCoRe V devices. The out-of-box examples that come with this kit also demonstrates the new enhanced agile HID protocol for secure and reliable wireless data transfers.

Kit Contains:

- CY3668 bridge/keyboard development boards (2)
- NL modules (2)
- CY3668- enCoRe II module (1)
- CY3668-enCoRe V modules (2)
- 3.3-V LCD (2)
- Power adaptor (2)
- Quick Start Guide
- Resource CD which includes, PSoC Designer, PSoC Programmer, Projects and documentation.

USB TRANSCEIVER

Cypress' TX2UL is the world's smallest USB 2.0ULPI transceiver. TX2UL is suitable for use in any application that already has a USB controller but requires a ULPI transceiver. TX2UL supports a high variable input voltage range of 3.0V-5.775V, and is configurable to input frequencies of 13, 19.2, 24, 26MHz. Along with its ultra small size (2.14 x 1.76mm), TX2UL consumes only 5µA in sleep mode, thus making it ideal for mobile and battery powered applications. This Cypress product is popular with USB modem dongles, handsets and other consumer electronic devices.

For quantities greater than listed, call for quote.

USB 2.0 TO UART BRIDGE CONTROLLER

Cypress CY7C64225 USB-to-UART Bridge Controller is a fully integrated USB-to-UART Bridge that provides a simple way of updating RS-232 based devices to USB with a minimal number of components. The CY7C64225 includes a USB 2.0 Full-Speed controller, a UART transceiver, internal regulator, internal oscillator and internal EEPROM in a 28-pin SSOP package. The internal EEPROM can be used to program customer specific information for OEM applications. This is done in-system via USB. Royalty free Virtual COM Port (VCP) device drivers are provided by Cypress Semiconductor. This allows the device to appear as a COM port to PC applications. All UART signals including the handshaking and control signals are implemented.

For quantities greater than listed, call for quote.

CYPRESS Buffers

RoHS Compliant **This product is RoHS compliant.**

BUFFERS

Cypress delivers high-performance, mixed-signal, programmable solutions that provide customers with rapid time-to-market and exceptional system value. Cypress offerings include the flagship PSoC® programmable system-on-chip families and derivatives such as PowerPSoC® solutions for high-voltage and LED lighting applications, CapSense® touch sensing and TrueTouch™ solutions for touchscreens. Cypress is the world leader in USB controllers, including the high-performance West Bridge® solution that enhances connectivity and performance in multimedia handsets. Cypress is also a leader in high-performance memories and programmable timing devices. Cypress serves numerous markets including consumer, mobile handsets, computation, data communications, automotive, industrial and military.

ZETEX LED/LCD DRIVER SOLUTIONS/LIGHTING ICS

The ZXLD1100/1101/1937 are regulated voltage mode boost converters for white LED driving for backlighting in color LCD displays. An integrated switch and over voltage clamp (ZXLD 1100) reduces the solution component count. The ZXSC400 is a regulated, voltage mode converter for white LED backlighting in color LCD displays. The LED current (which is programmed with a single resistor) changes by typically less than 1% over the Li-Ion supply range. The ZXSC300/310 are constant power converters primarily focused at single or dual cell (white) LED driving in flashlight and garden light applications. Both products feature a programmable peak current to optimize efficiency and supply requirements. The ZXSC300/310 features a pulse mode that eliminates the need for a rectifier diode, which provides the highest efficiencies available especially for single cell operation.

Features:

- Internal 30V switch - ZXLD1100/1101
- Open circuit protection - ZXLD1100
- Low 0.1V feedback voltage for high efficiency - ZXLD series
- High efficiency: 94% - ZXSC3xx in pulse mode
- 0.8V operation - ZXSC3xx
- Programmable LED current
- Drives up to 8 LEDs at 20mA - ZXSC400
- Series, parallel and series parallel combinations
- <500nA shutdown current

Applications:

- White LED backlighting for color LCD displays - ZXLD1100/1101
- Emergency/standby lighting - ZXSC400
- Solar powered traffic signs - ZXSC3xx
- High performance LED flashlights - ZXSC400
- LED flashlights - ZXSC3xx
- LED solar panel garden lights - ZXSC3xx

ZETEX LED DRIVER ICS

Features:

- 1000:1 PWM dimming range
- Inherent open-circuit LED protection
- High switching frequency
- Output shut down

Applications:

- Low voltage halogen replacement LEDs
- Automotive lighting
- Illuminated signs
- Low voltage industrial lighting

ZETEX VARIABLE SPEED BRUSHLESS FAN MOTOR CONTROLLER

The ZXMB1004 is a single phase BLDC motor pre-driver providing variable speed control. Suitable for DC fans and blowers the IC can take inputs from an external PWM source or a thermistor to adjust the speed characteristics.

Features:

- Single-phase pre-driver with variable speed control
- PWM output drive for speed control, variable by external thermistor or PWM inputs
- Adjustable minimum speed setting
- Ability to be able to remove any speed change against supply voltage variation
- Low noise

Applications:

- Telecom mainframe fans and blowers
- Mainframe and PC computer fans and blowers
- Industrial fans and blowers

ZETEX ANALOG VIDEO PRODUCTS

The Zetex range of video solutions has been expanded by the addition of a sync separator and a DC restore amplifier. The ZXFV4089 uses a sync pulse (typically from a sync separator) to restore the video black level to the correct DC voltage. The high speed amplifiers/buffers include quad and single amplifiers plus multi-channel unity-gain buffers. The ZXFV202, single video amplifier, is available in SOT23 offering superb differential gain and phase performance of 0.01%/0.01° respectively. ZXFV301N16 and ZXFV302N16 4:1 multiplexers are for use in video and other high speed applications.

ZETEX SINGLE AND MULTI-CELL SYSTEM POWER BOOST CONVERTERS

The ZXSC100/410/420 are voltage mode inductive boost converters aimed at providing system voltages from battery supplies. The ZXSC410/420 provide any regulated voltage above Vin from dual cell and Li-Ion cells with a typical line regulation of 1%. The ZXSC420 option provides an 'End of regulation' flag which uses all available battery energy before signaling a shutdown. The ZXSC100 caters for single cell operation with a guaranteed start up under full load conditions down to 1V. All products feature programmable peak current to optimize efficiency and supply requirements. Maximum output voltages are limited only by the rating of the external switching device.

Features:

- High efficiency: 80%+
- Typical 1% load and line regulation - ZXSC410/420
- Low shutdown current
- End of regulation flag - ZXSC420
- Single cell operation - ZXSC100
- Up to 2W output power

Applications:

- System supplies from dual cell and Li-Ion cells
- LCD bias voltage supplies
- System supplies from single Alkaline, NiCd or NiMH cells - ZXSC100
- System supplies from solar cells - ZXSC100
- Varactor and PIN diode bias

ZETEX ZXCT SERIES - CURRENT MONITORS

The ZXCT range of high-side current monitors and current sense amplifiers provide elegant design solutions for current measurement and power control. The ZXCT1009 current sensing monitor takes a high-side voltage developed across a current shunt resistor and, acting as a current mirror, translates it into a scaled ground referenced voltage. The ZXCT1010 offers reduced typical offset and improved accuracy at low sense voltages. The ZXCT1021/1022 current sense amplifiers are particularly suited to low sense voltage applications. The ZXCT1030 includes a 1.2V bandgap reference and comparator.

Features:

- High-side current sensing
- Output voltage scaling
- Up to 2.5V sense voltage
- 2.5-20V supply range
- 1% typical accuracy

Applications:

- Battery chargers
- Smart battery packs
- DC motor control
- Over current monitor
- Power management

✻ Relative to I_{OUT}

ZETEX RESET LOW MONITORS

These devices are three terminal voltage monitoring circuits used in microprocessor systems. They provide a 'power on reset' function and produce a system reset 'low' on power fail. A selection of reset thresholds are available. All devices are designed to operate over the temperature range -40°C to 85°C.

RoHS Compliant

Features:

- Automatic reset generation
- Guaranteed operation from 1V
- High output current

Applications:

- Microprocessor systems
- Computers and computer peripherals
- Automotive
- Battery powered equipment

ZETEX BOOST CONVERTER FOR CAMERA PHOTOFLASH APPLICATIONS

The ZXSC440 is a dedicated photoflash charger, charging an 80μF photoflash capacitor to 300V in 3.5 seconds from a 3V supply. The flyback conversion efficiency is typically 75%, much higher than the commonly used discrete charging circuits. The Charge pin enables the circuit to be initiated from the camera's microprocessor, using negligible current when flash is not being used. The Ready pin signals the microprocessor when the flash is charged and ready to be fired. A small amount of hysteresis on the voltage feedback shuts down the device as long as the capacitor remains fully charged, again using negligible current.

Features:

- Charges a 80μF photoflash capacitor to 300V in 3.5 seconds from 3V
- Charges various value photoflash capacitors
- Over 75% flyback efficiency
- Charge and Ready pins
- Consumes only 4.5μA when not charging
- Small MSOP8 low profile package

Applications:

- Digital camera flash unit
- Film camera flash unit

RoHS Compliant

EXAR
A New Direction in Mixed-Signal

EXAR RS-485/RS-422 TRANSCEIVERS

PRODUCT NEW

The XR317x series of transceivers offer a wide range of data rates from 250kbps to 20Mbps with high differential output swing (typ. 2.35V) which are ideal for industrial markets including applications such as field bus networks, high-speed motor control, factory automation, building automation, security systems and remote meter reading, amongst others.

For quantities greater than listed, call for quote.

EXAR ULTRA HIGH SPEED MULTIPROTOCOL SERIAL TRANSCEIVERS

The SP510 is industry's fastest serial transceiver that supports eight (8) popular serial interface standards for Wide Area Network (WAN) connectivity. The SP510 is fabricated using a low power CMOS process technology, and incorporates Exar's regulated charge pump allowing +5V only operation with an adjustable logic pin down to 1.65V. Exar's patented charge pump provides a regulated output of +5.8V, which will provide enough voltage for compliant operation in all modes. Eight (8) drivers and eight (8) receivers can be configured via software for any of the above interface modes at any time.
The SP510 requires no additional external components for compliant operation for all of the eight (8) modes of operation other than four capacitors used for the internal charge pump.

EXAR
A New Direction in Mixed-Signal

EXAR PCIE UARTS

Exar's new UART series, the industry's fastest PCIe 2.0Gen 1 UARTs with up to 25Mbps serial data rate. The series is composed of three devices: XR17V352/354/358 which offers distinguishing features customers require for next generation applications. These features include an on-chip PCIe PHY and PCIe digital controller, support for large FIFO sizes (256 bytes), optimized software drivers, and a complete single-chip endpoint solution eliminating the requirement for external PCIe-PCI bridge devices. The XR17V352/354/358 series is ideal for remote access servers, storage network management, factory automation, and Point-of-Sales (POS) systems.

EXAR USB 2.0 BUS INTERFACE UARTS

The XR21V141x series is the industry's fastest Universal Asynchronous Receiver Transmitter (UART) series with USB 2.0 compliant bus interface. The XR21V1410/V1412/V1414 have differentiated features which include the industry's smallest packaging options, up to 12Mbps, optimized software drivers, and support large FIFO sizes delivering flexible and proven design options to system architects.

SYSTEM BASIS CHIP - GEN 2

PRODUCT NEW

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Freescale Part No.	VDD Output Voltage	LIN Interface(s)	Wake-up Input/LIN Master Termination	V_{AX}	V_{SENSE}	MUX	Price Each		
								1	25	100
841-MCZ33903CP5EK	MCZ33903CP5EK	5.0V	0	3 Wake-up	No	Yes	Yes	3.07	2.74	1.71
841-MCZ33903CS5EK	MCZ33903CS5EK	3.3V	1	2 Wake-up + 1 LIN or 3 Wake-up + no LIN	No	Yes	Yes	3.42	3.04	1.90
841-MCZ33903CD5EK	MCZ33903CD5EK	5.0V	2	1 Wake-up + 2 LIN or 2 Wake-Up + 1 LIN or 3 Wake-up + no LIN	No	Yes	Yes	3.75	3.34	2.09

FREESCALE H-BRIDGES AND CONFIGURABLE SWITCHES

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Freescale Part No.	Package	Load Supply Voltage (V)	Supply Voltage (V)	Power Output Load Current (A)	Power Output Channels	Drain-to-Source On Resistance Typ (Ω)	Current Limit per Output Min. (A)	Interface Control	Price Each		
										1	25	100
841-MPC17C724EP	MPC17C724EP	QFN-16	2.7 to 5.5	2.7 to 5.5	0.4	2	-	-	Parallel	1.13	1.01	.631

FREESCALE ANALOG AND MIXED SIGNAL DEVELOPMENT TOOLS

PRODUCT NEW

MOUSER STOCK NO.	Freescale Part No.	Description	Price Each
841-KIT34704AEPEVBE	KIT34704AEPEVBE	Evaluation Kit -34704A - 8 Channel DC-DC Power Management IC	221.63
841-KIT34704BEPEVBE	KIT34704BEPEVBE	Evaluation Kit -34704B - 5 Channel DC-DC Power Management IC	221.63
841-KITLEDBKLT16EVBE	KITLEDBKLT16EVBE	Evaluation KIT-16 Ch LED driver board (256 LEDs)	503.70
841-KIT33812EKEVBE	KIT33812EKEVBE	Multifunctional Ignition and Injector Driver Evaluation board	104.41
841-KIT33812ECUEVME	KIT33812ECUEVME	Small Engine Control Reference Design featuring the 33812 and the S12P	267.75
841-KIT33903BD5EVBE	KIT33903BD5EVBE	MC33903 Evaluation board allows the user to implement the functionality of the MCZ33903D3 System Basic Chip (SBC)	115.51

Development Tools		Description									
700-MAXFILTERBRD+	MAXFILTERBRD+	Unpopulated PCB design to evaluate the MAX7408–MAX7415/MAX7418–MAX7425 5th-order, lowpass, switched-capacitor filters (SCFs)							56.82	-	-
700-MAX2900EVKIT#-	MAX2900EVKIT#-	Evaluation kit to evaluate MAX2900-MAX2904's BPSK, OOK, ASK, and FM modulations							135.13	-	-

MAXIM INTEGRATED Smart Card Readers & LAN/WAN

RoHS Compliant **This product is RoHS compliant.**

maxim integrated™

SMART CARD READERS

73S1209F/73S1210F SoC Smart Card Reader ICs

The Teridian 73S1209F and 73S1210F are self-contained, SoC smart card reader ICs that are the ideal solution for serially connected ISO-7816 designs. Any serial port connected or stand alone smart card reader can benefit from the unique feature set the Teridian 73S1209F and 73S1210F have to offer. With the 73S1209F and 73S1210F, products like personal PINPads, transparent smart card readers or stand alone smart card readers in embedded systems are easily and economically implemented.

NEW PRODUCT

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Maxim Integrated Part No.	Package Type	Description	Price Each		
				1	25	100
783-73S1209F-44IM/F	73S1209F-44IM/F	QFN-44	Contained 80515-SoC Serial Host Interface	7.02	4.86	3.24
783-73S1210F-68IM/F	73S1210F-68IM/F	QFN-68	Contained 80515-SoC Serial Host Interface	9.51	6.58	4.39
783-73S1210F-68IMR/F	73S1210F-68IMR/F	QFN-68	Contained 80515-SoC Serial Host Interface	10.33	6.90	4.85

73S1215F/73S1217F SoC Smart Card Reader ICs

The Teridian 73S1215F and 73S1217F are state-of-the-art, self contained SoC smart card reader ICs that are ideal solutions for any USB connected ISO-7816 design. Any USB connected or stand alone smart card reader can benefit from the unique feature set the Teridian 73S1215F and 73S1217F have to offer. With the 73S1215F and 73S1217F, products like the personal PINPads, transparent smart card readers or smart card readers built into laptops, desktops and peripherals (keyboards etc.) can now take advantage of the USB connectivity with no impact on the cost compared to traditional unconnected solutions.

For quantities greater than listed, call for quote.

73S8009x Electrical Interfaces

The 73S8009x circuits are transparent electrical interfaces that allow a host processor to communicate with all types of smart cards. A transparent interface implies that an image of each smart card signal is provided by the interface to the host processor and translated to the appropriate digital level. This configuration provides full control to the host of the card management and card activation/deactivation. Additionally, the architecture reduces die size to a minimum, making the 73S8009x circuits the most cost-effective on the market.

The 73S8009C implements a DC-DC converter thus requiring a single power supply whose voltage range can be as wide as +2.7V to +6.5V. Additionally, the 73S8009C features built-in power switches, allowing the device to operate either from a +5V USB bus or from a battery/system power supply.
The 73S8009R generates the smart card power supply (VCC) with an LDO regulator - the IC requires two (2) distinct power supplies.

For quantities greater than listed, call for quote.

73S8023C Smart Card Interface IC

The 73S8023C is a single smart card interface IC, compliant to the electrical requirements of ISO-7816-3, EMV 4.0 and NDS electrical specifications. The device can be used in systems that require the support of ISO 7816 smart cards, such as Conditional Access cards in digital TV (Set-Top-Box, Integrated DTV, PVRs etc), credit cards in payment terminals (Point of Sale, Pay-per-View in Set-Top-Box etc.) or general-purpose smart cards (identity, loyalty, control access etc.). The 73S8023C implements a step-up converter and requires a single +3.3V standard power supply.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Maxim Integrated Part No.	Package Type	Description	Price Each		
				1	25	100
783-73S8023C-IM/F	73S8023C-IM/F	QFN-32	ISO 7816 Electrical Interface IC	1.08	1.05	1.03

73S8024RN Smart Card Interface ICs

The 73S8024RN is a single smart card interface IC, compliant to the electrical requirements of ISO-7816-3, EMV 4.0 (EMV2000) and NDS electrical specifications. It is available either in a standard SO28 package, or in a 32-pin QFN package (5 x 5 x 0.8mm), making it the smallest solution available today in the market. It can be used in conjunction with any host microcontroller that can support the smart card protocol layer. In its SO28 package option, the Teridian 73S8024RN is an advantageous replacement for the industry-standard device TDA8004 since it offers better performance and requires fewer external components.

For quantities greater than listed, call for quote.

783-73S8024RN-DB	73S8024RN-DB	-	Demo Board for 73S8024RN Series	96.23	-	-

LAN

10/100 Ethernet PHYs

The 78Q8430 with integrated hardware IPChecksum and 32KB of configurable SRAM is ideal for applications where network throughput performance cannot compromise the low latency or performance requirements of mission critical functions like audio or video processing.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Maxim Integrated Part No.	Package Type	Description	Price Each		
				1	25	100
783-78Q2123/F	78Q2123/F	QFN-32	5x5mm QFN Includes HP Auto-MDIX Commercial Temperature Operating Range	2.15	1.51	1.05
783-78Q2133/F	78Q2133/F	QFN-32	5x5mm QFN Includes HP Auto-MDIX Industrial Temperature Operating Range	2.79	1.96	1.36
783-78Q2123-DB	78Q2123-DB	-	Demo Board for the 78Q21 x 3 Series	115.21	-	-

Digital Potentiometers & Supervisor Circuits

ON Semiconductor®

RoHS Compliant This product is RoHS compliant.

ON SEMICONDUCTOR DIGITALLY PROGRAMMABLE POTENTIOMETERS (DPP™)

Features:
- 32, 64, 100, 128, 256 position linear taper
- Nonvolatile wiper position storage
- Low power CMOS technology
- Resistor values: 10kΩ, 50kΩ and 100kΩ

♦ Surface Mount Device

ON SEMICONDUCTOR MP SUPERVISORY CIRCUITS WITH WATCHDOG TIMER AND SERIAL EEPROM

Supervisory Functions:
- Power Supply Voltage Supervisor
  - -Issues reset signal if power supply fails or is out of tolerance
  - -Insures μ C operates with power supply voltage
  - -Power-On reset and brownout protection
- Watchdog Timer (CAT1161, CAT1163)
  - -Restarts microcontroller/ASIC that has stalled because of a hardware or software failure

Memory Functions:
- 16K bit EEPROM Memory
- 400kHz I2C Interface
  - -10ms maximum write time
  - -16byte page write buffer
  - -Hardware write protection

Supervisor with Memory Advantages:
- Replaces two ICs with one
- Reduced PCB footprint by 50%
- Low cost

VIDEO SWITCHES

- High-bandwidth solutions
- Signal routing solutions for all video signals
- True bi-directional switching
- High quality and reliability with integrated ESD protection
- Compliant solutions based on third party

LAN SWITCHES

- Supporting up to Gigabit Ethernet
- Backward Compatible to 10/100
- Bandwidths > 350 MHz per channel
- Low R-on and C-on
- Excellent Isolation & Unwanted Signal Rejection
- Used by Major Notebook Manufacturers

For quantities greater than listed, call for quote.

PLX TECHNOLOGY PCI Bridges

Products may be RoHS compliant. Check mouser.com for RoHS status.

EXPRESSLANE™ PCI EXPRESS SWITCHES

ExpressLane™ PEX 86xx Series

These devices include the highest PCIe switch lane counts in the industry, at 96 and 80 lanes. These switches are PCI-SIG® PCIe 2.0 (Gen 2) specification-compliant with unique PLX-only features, including support for x16 port configurations, integrated non-transparency (NT) ports and a suite of performance-enhancing and system de-bug tools that empower system architects.
The PLX ExpressLane™ PEX 8696 (96 lanes, 24 ports), PEX 8680 (80 lanes, 20 ports), PEX 8664 (64 lanes, 16 ports) and PEX 8649 (48 lanes, 12 ports) allow designers to build switch fabrics, redundant backplanes and complex storage applications without having to deal with high latency, high power consumption and bandwidth limitations associated with using multiple smaller switch chips.

For quantities greater than listed, call for quote.

ExpressLane™ PEX 8114 PCI Express to PCI Bridge

The ExpressLane™ PEX 8114 is a high performance bridge designed to the PCI Express-to-PCI/PCI-X Bridge Specification 1.0, that enables designers to migrate legacy PCI and PCI-X bus interfaces to the new advanced serial PCI Express. This 2-port device is equipped with a standard but flexible PCI Express port that scales to x1, x2 or x4 and a parallel bus segment supporting the advanced PCI-X protocol or conventional PCI operation.

862-PEX8114-BC13BIG	PEX8114-BC13BIG	4-Lane PCI Express to PCI-X Bridge (Lead-Free)	51.10	47.95	44.78

ExpressLane™ PEX 8311 PCI Express to PCI Bridge

The ExpressLane™ PEX 8311 1-lane PCI Express (PCIe) to 32-bit, 66MHz generic local bus bridge offers complete protocol translations between these two standards. The device enables users to add scalable high bandwidth interconnection to a wide variety of applications including communication line cards, surveillance systems, industrial control, IP Media Servers, and medical imaging.

For quantities greater than listed, call for quote.

862-PEX8311-AA66BC-F	PEX8311-AA66BCF	1-Lane PCI Express Bridge, 21x21mm PBGA (Lead-Free)	43.02	40.37	37.72

PEX 8532 PCI Express Switch

The ExpressLane™ PEX 8532 device offers 32 PCI Express lanes, capable of configuring up to 8 flexible ports. The switch conforms to the PCI Express Base Specification, rev 1.0a. The 32-lane switch enables users to add scalable, high bandwidth I/Os to a wide variety of applications including servers, communications, storage, blade servers, and embedded systems.

For quantities greater than listed, call for quote.

862-PEX8532BC25BIG	PEX8532-BC25BIG	32-Lane, 8-Port PCI Express Switch, 35x35mm PBGA (Lead-Free)	168.94	-	-

PEX 8533 PCI Express Switch

The ExpressLane™ PEX 8533/8533S device offers 32 PCI Express lanes, capable of configuring up to 6 flexible ports. The switch conforms to the PCI Express Base Specification, rev 1.1. The 32-lane switch enables users to add scalable, high bandwidth I/Os to a wide variety of applications including servers, storage, communications, blade servers, and embedded-control systems. The PEX 8533S is well suited for fan-out, aggregation, peer-to-peer, backplane, and switch fabric applications. The architecture supports packet cut-thru with the industry's lowest latency of 115ns (x8 to x8) for a 32-lane switch. This, combined with large packet memory (1024 byte maximum payload size) and non-blocking internal switch architecture, provide full line-rate on all ports for performance-hungry applications.

For quantities greater than listed, call for quote.

862-PEX8533-AA25BIG	PEX8533-AA25BIG	32 Lane 6 Port PCI Express Switch (Lead-Free)	102.79	96.87	95.36

PEX 8508 PCI Express Switch

The ExpressLane™ PEX 8508 8-lane, 5-port switch product offers PCI Express switching capability conforming to the PCI Express Specification r1.1. This device enables users to add low cost, scalable high bandwidth switching, both fan-in/out and peer-to-peer, to a wide variety of applications including office automation, network interface adapters, docking stations, AMC cards, and processor isolation for servers, storage, and communications. Non-transparent bridging allows the designer to isolate processors in multi-host designs. This switch is hardware configurable and software programmable, allowing users to tailor their port configurations and quality-of-service system needs to suit their application requirements. The PEX 8508 is offered in a 19 x 19mm 296-ball PBGA.

For quantities greater than listed, call for quote.

FASTLANE™ PCI-TO-PCI BRIDGES

PCI 6140 33MHz PCI-to-PCI Bridge, 32-Bit

The FastLane™ PCI 6140 PCI-to-PCI Bridge (HB1) is optimized to provide PCI masters the ability to achieve optional zero clock latency in bursting data through the PCI-PCI bridge. It supports up to four secondary PCI master devices. The PCI 6140 is offered in a 23 x 17mm 128-pin PQFP.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	PLX Part No.	Description	Price Each		
			1	50	100
862-PCI6140-AA33PC-G	PCI6140-AA33PC G	PCI to PCI Bridge, 32bit, 33MHz, 128pin PQFP Package (Lead-Free)	13.55	12.71	11.94

PCI 6150 66MHz PCI-to-PCI Bridge, 32-Bit

The FastLane™ PCI 6150 PCI-to-PCI Bridge (HB4) is designed for high performance, high availability applications in hot swap, bus expansions, programmable data transfer rate control, frequency conversions from slower PCI to faster PCI or from faster PCI to slower PCI buses. The PCI 6150 has sophisticated buffer management and buffer configuration options designed to provide customizable performance optimization. The PCI 6150 is offered in a 17 x 17mm 256-ball BGA or 31 x 31mm 208-pin PQFP.

862-PCI6150-BB66BC-G	PCI6150-BB66BC G	Asynchronous PCI-to-PCI Bridge, 32bit, 66MHz, 256pin BGA (Lead-Free)	19.74	18.54	17.36

PCI-LOCALBUS 32-BIT TARGET I/O ACCELERATORS

PCI 9030 SMARTarget™ I/O Accelerator

The PCI 9030 with SMARTarget™ technology provides an array of features that define a new level of performance, flexibility and simplicity in PCI designs. A 32-bit, 33MHz PCI v.2.2-compliant device with burst transfers up to 132Mbytes/sec, the PCI 9030 delivers high performance to new PCI-based adapters and those migrating from legacy designs. The device's 60MHz local bus, 3V/5V operation, and programmable general-purpose I/Os (GPIOs) and chip selects bring unprecedented flexibility to a wide variety of memory and I/O devices. The combination of these features make adapters used in high-bandwidth applications, such as telecommunications and data communications interface cards, easier than ever to design.

9030 Performance Features:

- PCI v2.2 compliant 32-bit 33MHz Target Interface Chip enabling PCI Burst
- Transfers up to 132Mbytes/second.
- Up to 60MHz Local Bus operation enabling burst transfers up to 240Mbytes/second
- PCI Target Read Ahead Mode
- PCI Target Programmable Burst
- PCI Target Delayed Write
- Posted Memory Writes

PCI 9052 Target I/O Accelerator for Generic and ISA Local Bus Designs

The PCI 9052 provides low cost connectivity for PCI slave designs. It is specifically targeted at easing the transition of existing ISA designs to the more feature rich and performance oriented PCI bus. The PCI 9052 provides direct slave PCI functions by interfacing the adapter's I/O circuitry (control, address and data lines) to a host computer's microprocessor / memory architecture via the 32-bit PCI bus, which typically runs at 33 MHz.

9052 Performance Features:

- 32-bit, 33MHz PCI r2.1 compliant
- Up to 40MHz local bus operation
- ISA and Generic 32-bit, 40MHz local bus designs
- Glueless ISA interface for low cost adapters
- Supports multiplexed and non-multiplexed 8-, 16-, & 32-bit generic local buses
- 5V CMOS in 160-pin PQFP package
- PCI unlimited bursts transfers at up to 132MB/s
- Direct slave data transfers

For quantities greater than listed, call for quote.

PCI-LOCALBUS 32-BIT MASTER I/O ACCELERATORS

PCI 9054 Bus Master I/O Accelerator Chip

The PCI 9054 is a next generation 32-bit PCI bus mastering interface chip that seamlessly connects to and takes full advantage of Motorola's MPC860 PowerQUICC® and MPC850 microprocessors. The PCI 9054 I/O Accelerator, the industry's first CompactPCI® Hot Swap Friendly PCI interface chip, expands PLX's 32-bit PCI product line for CompactPCI® and PCI-based telecommunications, networking and other high-bandwidth systems.

9054 Performance Features:

- PCI v2.2 compliant 32-bit 33MHz Bus Master Interface Controller enables PCI Burst Transfers up to 132Mbytes/second
- General Purpose Bus Master Interface featuring an advanced Data Pip Architecture™ which includes two DMA engines, pro-grammable Target and Initiator data transfer modes and PCI messaging functions
- PCI v2.2 Power Management Spec compatible
- PCI v2.2 Vital Product Data (VPD) configuration support

PCI 9056 Master Chip I/O Accelerator Chip

The PCI 9056 Master Chip -- 32-bit, 66MHz PCI I/O accelerator is the most advanced, 32-bit general-purpose bus mastering device available for Motorola MPC850/860 PowerQUICC and generic 32-bit, 66MHz local bus based designs. The PCI 9056 incorporates PLX's industry leading Data Pipe Architecture technology, featuring DMA engines, programmable Direct Master and Direct Slave data transfer modes, and PCI messaging functions.

9056 Performance Features:

- 32-bit, 66MHz PCI r2.2 compliant
- Motorola PowerQUICC and generic 32-bit, 66MHz local bus modes
- 3.3V I/O, 5V tolerant bus interfaces
- PICMG 2.1 r2.0 Hot Swap Silicon
- 256-ball, 17 x 17mm, 1.00mm fine pitch PBGA (FPBGA)
- PCI bus bursts to 264MB/sec
- Local bus bursts to 264MB/sec

For quantities greater than listed, call for quote.

PCI 9080 I2O Compatible PCI Bus Master I/O Accelerator Chip

The PCI 9080 Master Chip is the standard in PCI I/O Accelerators. It incorporates all the features of the PCI 9060 Family of PCI products, while adding the options and features needed to keep ahead of the ever changing technology treadmill associated with PCI. In addition to providing the first processor independent I20 compliant messaging unit, the PCI 9080 is one of the first PCI interface chips to operate at both 3.3V and 5V.

PCI-LOCALBUS 64-BIT MASTER I/O ACCELERATORS

The PCI 9656 64-bit, 66MHz PCI I/O accelerator is the most advanced, general-purpose bus mastering device available for Motorola MPC850/860 PowerQUICC and generic 32-bit, 66MHz local bus based designs. The PCI 9656 incorporates PLX's industry leading Data Pipe Architecture technology, featuring DMA engines, programmable Direct Master and Direct Slave data transfer modes, and PCI messaging functions.

Features:

- 64-bit, 66MHz PCI r2.2 compliant
- Motorola PowerQUICC and generic 32-bit, 66MHz local bus modes
- 3.3V I/O, 5V tolerant bus interfaces
- PICMG 2.1 r2.0 Hot Swap Silicon
- 272-ball, 27 x 27mm, 1.27mm pitch PBGA
- Zero wait state burst operation PCI bus bursts to 528MB/sec Local bus bursts to 264MB/sec
- 2 DMA Channels Block and Scatter/Gather transfers DMA descriptor ring management Demand Mode and EOT Hardware controls GA
- PCI D3COLD Power Management Event (PME) generation support
- I2O r1.5 messaging unit
- Eight mailbox and two doorbell registers
- PCI arbiter supports 7 external masters
- Host mode reset/interrupt signal configuration

For quantities greater than listed, call for quote.

NETCHIP™ 227x 16-BIT USB 2.0 HIGH-SPEED PROGRAMMABLE PERIPHERAL CONTROLLER

NetChip's NET2270 16-bit USB 2.0 high-speed programmable peripheral controller is optimized for single or bi-directional data transfer devices such as printers, scanners, digital cameras, mass storage, and audio products. NET2270, the latest addition to our General Purpose USB Peripheral Controller family, complements our flagship, world's first NET2290 32-bit USB 2.0 highspeed peripheral controller.

ROHM SEMICONDUCTOR Integrated Circuits

ROHM SEMICONDUCTOR

RoHS Compliant This product is RoHS compliant.

AMBIENT LIGHT SENSORS

ROHM's ambient light sensor ICs can detect wide range illuminance from dark to sunlight. It can output the illuminance data to adjust the brightness of the LCD display of an electronic equipment. It enables to reduce power consumption of equipments and improve visibility by controlling brightness of the LCD display and the keypad backlight. This lineup offers a various type of current output, comparator output, and digital output to meet various designs and application requirements.

SILICON LABS Clocks, Sensors and Drivers

Products may be RoHS compliant. Check mouser.com for RoHS status.

CLOCK GENERATORS

NEW! TECHNOLOGY

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Silicon Labs Part No.	Package	Clock Inputs	Clock Outputs	Input Frequency	Output Frequency	RMS Phase Jitter	Price Each 1	25	100
634-SL28EB742ALI	SL28EB742ALI	QFN-56	1	16	14.318MHz	83.33/166MHz	-----	6.96	5.89	5.45
634-SL28EB742ALC	SL28EB742ALC	QFN-56	1	16	14.318MHz	83.33/166MHz	-----	5.89	5.45	4.53
634-SI5351A-A-GM	Si5351A-A-GM	QFN-20	1	8	25/27MHz	8KHz-125MHz	3.5ps rms	3.57	3.45	3.31
634-SI5351A-A-GU	Si5351A-A-GU	QSOP-24	1	8	25/27MHz	8KHz-125MHz	3.5ps rms	3.57	3.45	3.31
Development Tools		**Description**								**Price Each**
634-SI535X24QSOP-EVB	Si535x-24QSOP-EVB	Development Tool for SI5350/51 using QSOP-24 package								167.19
634-SI535X-20QFN-EVB	Si535x-20QFN-EVB	Development Tool for SI5350/51 using QFN-20 package								167.19
634-SI5XX-PROG-EVB	Si5xx-PROG-EVB	Evaluation kit contains the hardware and software needed for evaluation of the Any-Frequency I2C Programmable XO/VCXO								133.75

PCI EXPRESS® CLOCK GENERATORS (PCIe)

NEW! TECHNOLOGY

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Silicon Labs Part No.	Package	Clock Inputs	Clock Outputs	Input Frequency	Output Frequency	RMS Phase Jitter	Price Each 1	25	100
634-SI52142A01A-GM	Si52142A01A-GM	QFN-24	1	2	25MHz	100MHz, 25MHz	1ps rms	1.65	1.58	1.53
634-SI52143-A01AGM	Si52143-A01AGM	QFN-24	1	5	200MHz	100MHz, 25MHz	1ps rms	2.95	2.85	2.73
634-SI52144A01A-GM	Si52144A01A-GM	QFN-24	1	4	25MHz	25MHz	1ps rms	2.90	2.79	2.69
634-SI52146A01A-GM	Si52146A01A-GM	QFN-32	1	6	25MHz	25MHz	1ps rms	3.40	3.28	3.16
634-SI52147A01A-GM	Si52147A01A-GM	QFN-48	1	9	25MHz	25MHz	1ps rms	3.88	3.73	3.60
634-SI53152A01A-GM	Si53152A01A-GM	QFN-24	1	3	25MHz	25MHz	1ps rms	1.63	1.56	1.50
634-SI53154A01A-GM	Si53154A01A-GM	QFN-24	1	4	25MHz	25MHz	1ps rms	2.48	2.40	2.30
634-SI53156A01A-GM	Si53156A01A-GM	QFN-32	1	6	25MHz	25MHz	1ps rms	2.93	2.82	2.72
634-SI53159A01A-GM	Si53159A01A-GM	QFN-48	1	9	25MHz	25MHz	1ps rms	3.40	3.28	3.16
PCI Express® Development Tools		**Description**								**Price Each**
634-SI53159-EVB	Si53159-EVB	Evaluation Board for Si52159 using QFN-48								187.25
634-SI53154-EVB	Si53154-EVB	Evaluation Board for Si52154 using QFN-24								133.75
634-SI52147-EVB	Si52147-EVB	Evaluation Board for Si52147 using QFN-48								187.25
634-SI52144-EVB	Si52144-EVB	Evaluation Board for Si52144 using QFN-24								133.75

JITTER ATTENUATING CLOCKS

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Silicon Labs Part No.	Package	Output Clock Frequency Range (MHz)	Control	Clock Inputs/Outputs	Input Freq. (MHz)	Output Freq. (MHz)	Jitter (12kHz-20MHz)	Price Each 1	25	100	1000
634-SI5317A-C-GM	Si5317A-C-GM	QFN-36	1-710	Pin	1/2	1 to 710	1 to 710	300fs ms (typ)	16.05	14.06	13.51	12.02
634-SI5317B-C-GM	Si5317B-C-GM	QFN-36	1-350	Pin	1/2	1 to 710	1 to 710	300fs ms (typ)	13.42	12.25	11.78	10.28
634-SI5317C-C-GM	Si5317C-C-GM	QFN-36	1-200	Pin	1/2	1 to 710	1 to 710	300fs ms (typ)	11.22	10.75	10.34	8.84
634-SI5317D-C-GM	Si5317D-C-GM	QFN-36	1-100	Pin	1/2	1 to 710	1 to 710	300fs ms (typ)	9.47	9.54	9.18	7.68
Evaluation Kits		**Description**										**Price Each**
634-SI5317-EVB	Si5317-EVB	Evaluation Board for Si5317 Series Jitter Attenuating Clocks										133.75

4-PLL PRECISION CLOCK MULTIPLIER/JITTER ATTENUATORS

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Silicon Labs Part No.	Package	Reference Inputs	Clock Outputs	Control	V_{DD} (V)	Freq. (Max.)(MHz) Inputs	Freq. (Max.)(MHz) Outputs	Output Format	Price Each 1	25	100	1000
634-SI5375B-A-GL	Si5375B-A-GL	BGA-80	4	4	I2C	1.8, 2.5	710	808	CMOS, LVDS, LVPECL, CML	62.40	60.09	57.78	57.78
634-SI5374B-A-GL	Si5374B-A-GL	BGA-80	8	8	I2C	1.8, 2.5	710	808	CMOS, LVDS, LVPECL, CML	81.13	78.12	75.11	75.11
Evaluation Kits		**Description**											**Price Each**
634-SI5374-EVB	Si5374-EVB	Evaluation Board for Si5374B Any Frequency Precision Clock Multiplier/Jitter Attenuators											401.25
634-SI5375-EVB	Si5375-EVB	Evaluation Board for Si5375B Any Frequency Precision Clock Multiplier/Jitter Attenuators											401.25

RF SYNTHESIZERS

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Silicon Labs Part No.	Package	Description	RF1 (MHz)	RF2 (MHz)	IF (MHz)	Setting Time (μs)	Input RF (MHz)	Price Each 1	25	100
634-SI4112-D-GM	SI4112-D-GM	MLP-28	General Purpose	n/a	n/a	62.5 to 1000	200	2 to 26	7.35	7.08	6.81

3-AXIS ACCELEROMETERS

The MEMS sensor of a linear accelerometer is based on a silicon, inter-digitated, comb-like structure composed of fixed and movable fingers. To sense the acceleration in different directions, these structures are packaged in orthogonal groups. The acceleration in each direction is sensed by measuring the displacements of the movable elements correlated to that axis. The motion measured by the sensor is then translated into an analog or digital signal.

For quantities greater than listed, call for quote.

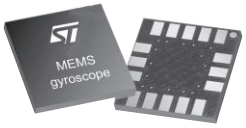
GYROSCOPES

ST's complete family of single-axis (yaw) and two-axis (pitch-and-roll, pitch-and-yaw) MEMS gyroscopes offers the industry's widest full-scale range, from 30 to 6000°/s.

The innovatively designed sensors can provide two separate outputs for each axis at the same time – an unamplified output value for general detection of angular motion and a 4x amplification for high-resolution measurements that enhances design flexibility and the user experience.



For quantities greater than listed, call for quote.

PRODUCT EVALUATION BOARDS FOR MOTION SENSORS (MEMS)

ST's MEMS-based acceleration sensors are all supported by their own evaluation kits that allow system designers to evaluate chip performances and capabilities. The kit enables the acquisition, through an analog or digital interface, of acceleration data sensed by accelerometers, with the support of a dedicated software in case of digital solution. For sensors with analog output, sensing data are converted by a low-noise capacitive amplifier into an analog voltage, while for digital sensors, the signals measured by the device are read by an ST7 microcontroller mounted on the board and sent to a PC via USB link for further processing.

RESET CIRCUITS

These reset circuits are low-power supervisory devices used to monitor power supplies. They perform a single function; asserting a reset signal whenever the VCC supply voltage drops below a preset value and keeping it asserted until VCC has risen above the preset threshold for a minimum period of time.

SUPERTEX HOTSWAP CONTROLLER/IN-RUSH CURRENT LIMITER/CIRCUIT BREAKER INTEGRATED CIRCUITS

High Voltage, Negative Rail Break

The HV1xx hotswap product family is designed to control the inrush current while eliminating any undesirable glitches resulting from hot insertion of the circuit cards into live backplanes. The award winning HV1xx, requires no external components, except a single pass element to operate. It utilizes an innovative and proprietary design that normalizes the hotswap period, regardless of pass element and load capacitor resulting in consistent hotswap operations. An open drain Power Good (PWRGD) signal is generated once all conditions have been satisfied.

HV100/101 Features:

- Top 100 products EDN magazine
- Industry first 3 pin hotswap controller
- MOSFET Auto adapting circuit
- Safe Hotswapping on backplane power supply rail
- Patent pending short circuit protection
- For Evaluation/Design Shortcut see Demo Boards

SUPERTEX LINEAR REGULATOR INTEGRATED CIRCUITS

The LR6 is a high-input voltage linear regulator for simple functions such as SMPS start-up and high-voltage line conditioning/regulation. The LR7 is a high-input voltage SMPS start-up circuit. The LR8 has an adjustable output voltage. The SR036 and SR037 are dual output, off-line regulators. The LR12 is a high voltage, low output current, adjustable linear regulator. It has a wide operating input voltage range of 13.2V to 100V.

• For Evaluation/Design Shortcut see Demo Boards

SUPERTEX RELAY DRIVER INTEGRATED CIRCUITS

The Supertex HV9901 is a BiCMOS/DiMOS universal relay driver that employs PWM switching techniques. It is designed for efficient and energy-saving operation of a low voltage relay with supply voltages ranging from 10-450V DC through utilization of the relay coils' inductance.

Source/Sink Outputs - Push-Pull

SUPERTEX HIGH VOLTAGE ANALOG SWITCH/MULTIPLEXER INTEGRATED CIRCUITS

These are low charge injection 8 or 16-channel high-voltage analog switch integrated circuit (IC) intended for use in applications requiring high voltage switching controlled by low voltage control signals, such as ultrasound imaging and printers.

Features:

- HVCMOS technology for high performance
- Very low quiescent power dissipation-10μA
- Output On-resistance typically 22ohms
- Low parasitic capacitances
- DC to 10MHz analog signal frequency
- -60dB typical output off isolation at 5MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- On-chip shift register, latch and clear logic circuitry
- Flexible high voltage supplies
- Surface mount package available

RoHS Compliant

SUPERTEX ELECTRONIC LINE SWITCH INTEGRATED CIRCUITS

♦Surface Mount Device

These electronic switch ICs are designed as a replacement for the typical mechanical hook switch or electromechanical relays in telephones and answering machines. Multiple low-level inputs are provided for design versatility and may be controlled directly from logic circuitry or from mechanical switches. These ICs are line-powered and are especially useful in applications that require telephone operation when external power is lost or otherwise unavailable.

• For Evaluation/Design Shortcut see Demo Boards

SUPERTEX LED Drivers

Supertex

RoHS Compliant **This product is RoHS compliant.**

Supertex offers an extensive line of high-performance LED driver products for architectural lighting, display backlighting, and general lighting applications. Their LED driver ICs range from simple, low cost linear regulators to feature-rich switching regulators configured in buck, boost, buck-boost, and SEPIC topologies. These LED driver ICs offer high efficiency, excellent LED current matching, very low noise, and a wide dimming range. In addition, they have a very wide input voltage range up to 450V and multiple output capabilities in the smallest footprints.

ANALOG-TO-DIGITAL CONVERTER EVALUATION MODULES

PRODUCT NEW

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Texas Instruments Part No.	Description	Price Each
595-ADS1118EVM	ADS1118EVM	Evaluation board for the ADS1118, a 16-bit, precision, 860SPS ADC with Integrated MUX, PGA, Temp Sensor, Oscillator & Ref	54.60
595-ADS1131REF	ADS1131REF	Evaluation board for the ADS1131, a 18-bit ADC for Bridge Sensors	54.60
595-ADS1258EVM-PDK	ADS1258EVM-PDK	Performance demonstration kit for the ADS1258, a low-noise, 24-bit, 8-channel, delta-sigma, 125kSPS ADC	166.05
595-ADS1292RECG-FE	ADS1292RECG-FE	Demo Board for the ADS1292R, 24-bit, 2-channel, delta-sigma ADC	110.34
595-ADS1299EEGFE-PDK	ADS1299EEGFE-PDK	Demo Board for the ADS1299, 24-bit, 8-channel, delta-sigma ADC	221.79
595-ADS130E08EVM-PDK	ADS130E08EVM-PDK	Performance demonstration kit for the ADS130E08, a 16-bit ADC	221.79
595-ADS131E08EVM-PDK	ADS131E08EVM-PDK	Demo Board for the ADS131E08, 24-bit, delta-sigma ADC	221.79
595-ADS4122EVM	ADS4122EVM	Evaluation board for the ADS4122, a 12-bit, 1-channel, pipeline, 65MSPS ADC	333.23
595-ADS4125EVM	ADS4125EVM	Evaluation board for the ADS4125, a 12-bit, 1-channel, pipeline, 125MSPS ADC	333.23
595-ADS4142EVM	ADS4142EVM	Evaluation board for the ADS4142, a 14-bit, 1-channel, pipeline, 65MSPS ADC	333.23
595-ADS4145EVM	ADS4145EVM	Evaluation board for the ADS4145, a 14-bit, 1-channel, pipeline, 125MSPS ADC	333.23
595-ADS4246EVM	ADS4246EVM	Evaluation board for ADS4246, dual-channel 12-bit/14-bit, 160 MSPS	333.23
595-ADS5263EVM	ADS5263EVM	Evaluation board for the ADS5263, a 16-bit, quad channel, 100MSPS, pipeline ADC	333.23
595-ADS5271EVM	ADS5271EVM	Evaluation board for ADS5271, 10-bit/12-bit, 50 MSPS	221.79
595-ADS5481EVM	ADS5481EVM	Evaluation board for ADS5481, 16-bit, 80 MSPS	333.23
595-ADS5482EVM	ADS5482EVM	Evaluation board for ADS5482, 16-bit, 105 MSPS	341.57
595-ADS5483EVM	ADS5483EVM	Evaluation Board for ADS5483, with a 16-Bit 135MSPS ADC with DDR LVDS Outputs	333.23
595-ADS5484EVM	ADS5484EVM	Evaluation board for ADS5484, 16-bit, 170 MSPS	333.23
595-ADS54RF63-ADX4	ADS54RF63-ADX4	Interleaved evaluation board for ADS54RF63, 12-bit, 550 MSPS	2785.12
595-ADS58C48EVM	ADS58C48EVM	Evaluation board for the ADS58C17, a 4-channel, 11-bit, 200 MSPS ADC featuring TI's SNRBoost technology	333.23
595-ADS6129EVM	ADS6129EVM	Evaluation board for ADS6129, 12-bit, 250 MSPS	333.23
595-ADS6142EVM	ADS6142EVM	Evaluation board for ADS6142, 14-bit, 65 MSPS	333.23
595-ADS62C17EVM	ADS62C17EVM	Evaluation board for ADS62C17, 11-bit, 200 MSPS	333.23
595-ADS62P23EVM	ADS62P23EVM	Evaluation board for ADS62P23, 12-bit, 80 MSPS	333.23
595-ADS62P42EVM	ADS62P42EVM	Evaluation board for ADS62P42, 14-bit, 65 MSPS	333.23
595-ADS6423EVM	ADS6423EVM	Evaluation board for ADS6423, 12-bit, 80 MSPS	333.23
595-ADS7863EVM	ADS7863EVM	Evaluation board for the ADS7863, a dual, 12-bit, multi-channel, 2MSPS, SAR ADC	85.67
595-ADS7924EVM	ADS7924EVM	Evaluation board for the ADS7924, a 4-channel, 12-bit, 100kSPS, ADC with an I²C™ interface	83.59
595-ADS8331EVM	ADS8331EVM	Evaluation board for the ADS8331, a low power, high resolution, 16-bit, 4-channel, 500kSPS ADC	54.60
595-ADS8332EVM	ADS8332EVM	Evaluation board for the ADS8332, a low power, high resolution, 16-bit, 8-channel, 500kSPS ADC	54.60
595-ADS850-EVM	ADS850-EVM	Evaluation board for ADS850Y, 14-bit, 10 MSPS	166.05
595-ADS8557EVM	ADS8557EVM	Evaluation Board for the ADS8556, ADS8557 or ADS8558 with a 16/14/12-Bit 730kSPS ADC	110.34
595-ADS8568EVM-PDK	ADS8568EVM-PDK	Evaluation board for the ADS8568, a 16-bit, eight channel, 670 kSPS ADC	779.03
595-ADS8638EVM-PDK	ADS8638EVM-PDK	Performance demonstration kit for the ADS8638, a 12-bit, 8-channel, bipolar SAR, 1MSPS ADC	221.79
595-AMC1200EVM	AMC1200EVM	Evaluation board for the AMC1200, an isolated 1-channel, delta-sigma ADC	54.60
595-AMC1204EVM	AMC1204EVM	Evaluation board for the AMC1204, a 1-bit, 20MHz, 2nd Order, isolated delta-sigma ADC	54.60
926-C08D1500CIYBNOPB	ADC08D1500CIYB/NOPB	ADC08 Dual, low power, high perfomance for a single 1.5 Gsps version	597.81
926-DC083000CIYBNOPB	ADC083000CIYB/NOPB	ADC08 Single, low power, high performance with integrated 4K Byte FIFO	859.06

DIGITAL-TO-ANALOG CONVERTER EVALUATION MODULES

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Texas Instruments Part No.	Description	Price Each
595-DAC3152EVM	DAC3152EVM	Evaluation module for the DAC3152, a dual-channel, 10-bit, 500MSPS DAC	221.79
595-DAC3162EVM	DAC3162EVM	Evaluation module for the DAC3162, a dual-channel, 12-bit, 500MSPS DAC	221.79
595-DAC3282EVM	DAC3282EVM	Evaluation board for DAC3282, 16-bit, 625 MSPS	556.13
595-DAC3482EVM	DAC3482EVM	Evaluation board for DAC3482, 16-bit, 1.25 GSPS	556.13
595-DAC3484EVM	DAC3484EVM	Evaluation board for the DAC3484, a 4-channel, 16-bit, 1.25GSPS, DAC	556.13
595-DAC34H84EVM	DAC34H84EVM	Evaluation board for DAC34H84, 16-bit, 1.25 GSPS	556.13
595-DAC5681ZEVM	DAC5681ZEVM	Evaluation board for DAC5681, 16-bit, 1 GSPS	556.13
595-DAC5689EVM	DAC5689EVM	Evaluation board for DAC5689, 16-bit, 800 MSPS	556.13
595-DAC7562EVM	DAC7562EVM	Evaluation board for the DAC7562, a dual 12-bit, low-power, ultra low glitch DAC	54.60
595-DAC7571EVM	DAC7571EVM	Evaluation Module for DAC7571, High-Resolution I2C-Input DAC	54.60
595-DAC7574EVM	DAC7574EVM	Evaluation Module for DAC7574, High-Resolution I2C-Input DAC	54.60
595-DAC8562EVM	DAC8562EVM	Evaluation board for the DAC8562, a dual 16-bit, low-power, ultra low glitch DAC	54.60
595-DAC8565EVM	DAC8565EVM	Evaluation Module for DAC8565, 16-bit High Resolution, Quad-Channel	54.60
595-TPL0102EVM	TPL0102EVM	Evaluation Module for the TPL0102, a dual-channel, 256-Position resolution Pot	32.31

MOUSER STOCK NO.	Texas Instruments Part No.	Package	Price Each
595-ADS1198ECGFE-PDK	ADS1198ECGFE-PDK	Reference Design for the ADS1198, a Simultaneous Sampling, 16-bit, Delta-Sigma (??) Analog-to-Digital Converter (ADC)	227.33
595-ADS4146EVM	ADS4146EVM	Evaluation Module for the ADS4146, a Low-Power 14-Bit 160 MPSP Analog-to-Digital Converter (ADC)	333.23
595-ADS1231REF	ADS1231REF	Evaluation Module for the ADS1231, a 24-Bit, Delta-Sigma, Precision low Noise, Analog-to-Digital Converter (ADC)	54.60
595-AMC1203EVM	AMC1203EVM	Evaluation Module for the AMC1203, an Isolated Single-Channel Delta-Sigma (??) Modulator	27.85
595-CDC3S04EVM	CDC3S04EVM	Evaluation Module for the CDC3S04, a Four-Channel Low Power Sine-Wave Clock Buffer	166.05
595-CDCLVD1204EVM	CDCLVD1204EVM	Evaluation Module for the CDCLVD1204, a Low-Jitter, 2-Input Selectable 1:4 Universal-to-LVDS Buffer	166.05
595-CDCLVD1213EVM	CDCLVD1213EVM	Evaluation Module for the CDCLVD1213, a Low-Jitter, One Input 1:4 Low Additive LVDS Buffer with Divider	166.05
595-DRV8818EVM	DRV8818EVM	Evaluation Module for DRV8818, integrated micro-stepping motor driver, supply voltage 8V to 35V	110.34
595-DRV8825EVM	DRV8825EVM	Evaluation Module for the DRV8825, a 2.5A Bipolar Stepper Motor Driver with On-Chip 1/32 Microstepping Indexer	166.05
595-DRV8832EVM	DRV8832EVM	Evaluation Module for DRV8832 a 1A, H-bridge Motor Driver with Parallel Control Interface	54.60
595-DRV8834EVM	DRV8834EVM	Evaluation Module for DRV8834, a motor driver with supply voltages from 2.5V to 10.8V	110.34
595-DRV8835EVM	DRV8835EVM	Evaluation Module for DRV8835, a motor driver with supply voltages from 2.0V to 11V	54.60
595-DRV8836EVM	DRV8836EVM	Evaluation Module for DRV8836, a motor driver with supply voltage from 2.0V to 7V	54.60
595-DRV8837EVM	DRV8837EVM	Evaluation Module for DRV8837 1.8A, Motor Driver	27.85
595-DRV8840EVM	DRV8840EVM	Evaluation Module for the DRV8840, a 5A Brushed DC Motor Driver with Inrush Protection	166.05
595-DRV8843EVM	DRV8843EVM	Evaluation Module for the DRV8843, a 2.5A Dual Brushed or Single Bipolar Stepper Motor Driver	166.05
595-ISO1176TEVM	ISO1176TEVM	Evaluation Module for ISO1176T PROFIBUS, ISO35T RS-485 and ISO3086T RS-485 Transceiver	54.60
595-LV320DAC3203EVMK	TLV320DAC3203EVM-K	Evaluation Module for TLV320DAC3203, a audio DAC with USB-based motherboard	284.44
595-SN65HVD96EVM	SN65HVD96EVM	Evaluation Module for the SN65HVD96, a SymPol™ Transceiver	54.60
595-TCA7408-5405EVM	TCA7408-5405EVM	Evaluation Module for TCA7408 and TCA5405	27.85
595-SN65HVD255DEVM	SN65HVD255DEVM	Evaluation Module for SN65HVD255 3.3V to 5V CAN	54.60
595-SN65HVD72EVM	SN65HVD72EVM	Evaluation Module for SN65HVD78, a 3.3V RS-485 with IEC ESD Protection	55.97
595-TLK110CUSEVM	TLK110CUSEVM	Evaluation Module for TLK110	110.34
595-TLK10002FPGAEVM	TLK10002FPGAEVM	Evaluation Module for TLK10002, FPGA Daughterboard	3342.37
595-TPD4S014EVM	TPD4S014EVM	Evaluation Module for TPD4S014, Single Chip Solution for USB Charger Port Protection	54.60
595-TPL0401EVM	TPL0401EVM	Evaluation Module for TPL0401, a I2C bus controlled, Single Channel, Linear-Tapered Pot	28.55
595-TPL0501EVM	TPL0501EVM	Evaluation Module for TPL0501, a Single Channel, Linear-Taper Digital Pot	22.84
595-TMP103EVM	TMP103EVM	Evaluation Module for the TMP103, a Low Power Digital Sensor with 2-Wire Interface	54.60
595-TSW4200	TSW4200	Dual ADC and Dual DAC Development Platform for Xilinx Virtex VI FPGA Dev. Platform	1447.73

THAT CORPORATION Analog ICs

THAT Corporation

RoHS Compliant **This product is RoHS compliant.**

INGENIUS® BALANCED LINE RECEIVERS

The 1200-series balanced line receivers overcome a serious limitation of conventional balanced input stages: poor common mode rejection. While conventional input stages measure well in the lab and perform well on paper, they fail to live up to their CMRR specs when fed from even slightly unbalanced source impedances — a common situation in pro sound environments. This is because conventional stages have low common-mode input impedance, which interacts with imbalances in source impedance to unbalance common-mode signals, making them indistinguishable from desired, balanced signals.

For quantities greater than listed, call for quote.

BALANCED LINE RECEIVERS

THAT Corporation offers a family of self-contained differential amplifiers preconfigured for gains of 0, ±3, and ±6dB, intended primarily for use as audio balanced line receivers. These parts offer great audio performance with decent common-mode rejection, at a price that makes them an attractive, space-saving alternative to conventional op-amps.

For quantities greater than listed, call for quote.

BLACKMER® VOLTAGE CONTROLLED AMPLIFIERS

THAT Corporation Blackmer VCAs are characterized by an exponential control characteristic (gain varies directly in decibels -- dBs -- with control voltage), extremely wide dynamic range, and low signal distortion. Our latest designs are particularly neutral in sound, imparting little or no coloration to audio signals in and of themselves.

For quantities greater than listed, call for quote.

MATCHED TRANSISTOR ARRAYS

The THAT 300 series are large-geometry, 4-transistor, monolithic NPN and/or PNP arrays exhibiting both high speed and low noise, with excellent parameter matching between transistors of the same gender. With typical base-spreading resistances of 25ohms for the PNP devices (30ohms for the NPNs), their low voltage noise of under 1 nV/Hz1/2, the 300 series are ideally suited for low-noise amplifier input stages.

For quantities greater than listed, call for quote.

OUTSMARTS™ BALANCED LINE DRIVERS

The THAT 1606 and 1646 are a new generation of monolithic audio differential line drivers offering improved performance over conventional cross-coupled designs. Based on a high-performance, fully differential opamp and laser-trimmed thin-film resistors, both families exhibit low noise and distortion, high slew rate, and wide output swing. The parts are stable when driving difficult loads, and have short-circuit protected outputs.

For quantities greater than listed, call for quote.

ANALOG ENGINE® DYNAMICS PROCESSORS

These single-chip audio dynamics processors combine all the active circuitry needed to construct a wide range of dynamics processors. The 43xx series includes a high-performance, exponentially-controlled Blackmer® VCA and a log-responding rms-level sensor. The 4301 and 4320 include three general-purpose opamps allowing more complex signal processing.

ALD Precision Operational Amplifiers

RoHS Compliant This product is RoHS compliant.

ADVANCED LINEAR DEVICES, INC.
♦ Surface Mount Device

ALD OPERATIONAL AMPLIFIERS - INSTRUMENT GRADE, OSCILLATION FREE

- Temperature range 0°C to 70°C
- Patented EPAD(R) Technology
- Class AB output drivers
- Voltage Supply Aux. Max. 12(±6)V
- Symmetrical complementary outputs
- High temperature stable
- Ultra low input offset voltage
- Ultra low input bias currents
- Rail to rail input and output
- Unity gain stable
- Cable driver
- Ringing free

Rail to Rail Input/Output Voltage

For quantities greater than listed, call for quote.

CEL SMD SILICON MONOLITHIC CIRCUITS

CEL offers a broad range of silicon ICs for multimedia, mobile communications and wireless applications. They are based on a high performance bipolar process featuring fTS up to 45GHz. The process permits the productions of transistors with lower parasitics, improved passivation and emitter line widths as small as 0.6 microns. It accommodates low operating voltages while offering high operating frequencies, low noise figures, high efficiency and high reliability. These devices operate from 1 to 5 volts; they include amplifiers, prescalers, frequency converters, IQ modulators and demodulators and multifunction ICs for GPS (Global Positioning System), RKE (Remote Keyless Entry) and W-CDMA markets or for cable modems/settop boxes applications.

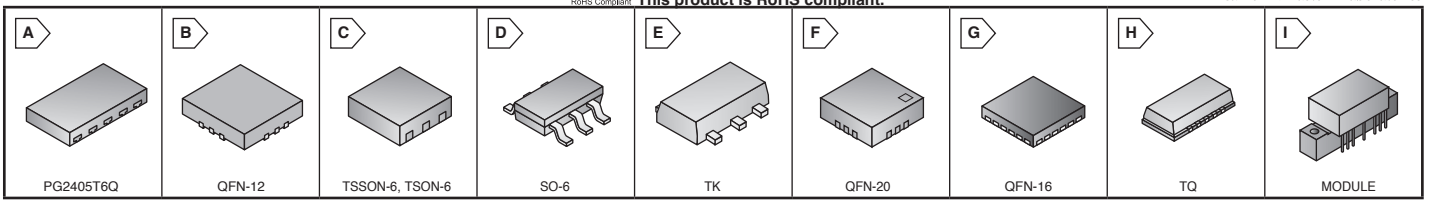
RENESAS/CEL Monolithic Microwave ICs

CEL California Eastern Laboratories

RoHS Compliant **This product is RoHS compliant.**



GAAS MONOLITHIC CIRCUITS

♦ Surface Mount

CEL offers a broad range of gallium arsenide (GaAs) IC switches for medium to high power applications. They have the same high reliability, low cost technology found in CEL's discrete FET devices.

Electrical Characteristics (TA=25°C)

RoHS Compliant

Medium Power 1 W Compact SP3T Switch for WiFi + Bluetooth, NFC-RFID

The µPG2405T6Q is an SP3T GaAs FET switch which was developed for BluetoothTM, wireless LAN and NFC. This device can operate from 10MHz to 2.5GHz, with low insertion loss and high linearity.

For quantities greater than listed, call for quote.

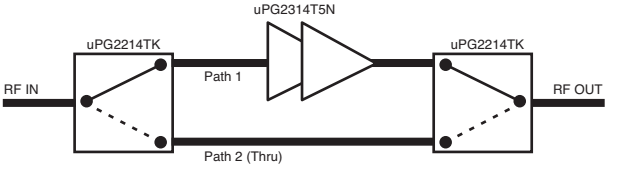
RANGE EXTENDING GAAS MONOLITHIC CIRCUITS

These devices (the UPG2314T5N medium power amplifier and two UPG2214TK RF switches) can be used for a "range extension" application at 2.4GHz (such as for Bluetooth or ZigBee applications). With a 3V power supply and 0dBm of input power, this range extender will deliver 19dBm of output power (including the insertion loss of the switches and PCB), for a current draw of approximately 65mA. The "thru" path has approx. 1.4dB of loss (insertion loss of both switches + loss in the PCB). Please see the CEL RF IC Evaluation Boards page for evaluation boards (UPG2301TQ-ZBT-EV-A, UPG2314T5N-ZBT-EV-A and UPG2250T5N-EVAL-A) that are available for use in this type of application.



RoHS Compliant

RF Front-End IC for 2.4GHz Bluetooth™, ZigBee, ISM Band

♦ Surface Mount

The UPG2353T6S is a RF front-end integrated circuit (FEIC) for Bluetooth Class 1, ZigBee, and ISM Band and includes TX/Bypass switches, a power amplifier, and a low-pass filter This device does not require any RF matching parts. The UPG2253T6S operates with 3.0V supply and provides high efficiency and low harmonics.

For quantities greater than listed, call for quote.

PRECISION OPERATIONAL AMPLIFIERS

Intersil's precision operational amplifier portfolio delivers best in class performance to achieve low offset voltages, low noise, and overall higher performance at low power. Intersil's operational amplifiers are perfect for precision instrumentation, industrial and high end medical applications where higher accuracy makes a difference.

For quantities greater than listed, call for quote.

EVALUATION MODULES

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Texas Instruments Part No.	Description	Price Each
595-AMC1100EVM	AMC1100EVM	Evaluation Module for AMC1100, an Isolated Single-Ch. Analog Amplifier	55.97
595-BUF08630EVM	BUF08630EVM	Evaluation Module for the BUF08630 uder various signal, reference and supply conditions	166.05
595-DRV2603EVM-CT	DRV2603EVM-CT	Evaluation Module for DRV2603, a haptic driver designed to control LRA and ERM motors	110.34
595-DRV612EVM	DRV612EVM	Evaluation Module for the DRV612, 2-Vrms Stereo Line Driver	110.34
595-DRV632EVM	DRV632EVM	Evaluation Module for the DRV632, 2-Channel, 2-VRMS Line Output Stereo Line Driver	110.34
595-DRV8601ZQVEVM	DRV8601ZQVEVM	Evaluation Module for the DRV8601, a General Purpose Single-Supply Haptics Driver designed to drive a DC motor	110.34
595-INA149EVM	INA149EVM	Evaluation Module for the INA149, High Common-Mode Difference Amplifier	54.60
595-INA223EVM	INA223EVM	Evaluation Module for INA223, evaluating under various signal, shunt, and supply conditions	85.67
595-INA230EVM	INA230EVM	Evaluation Module for the INA230, a High-Side Current Sensor and Power Monitor	83.59
595-INA282-286EVM	INA282-286EVM	Evaluation Module for the INA282, a Wide Common Mode Range, Bidirectional, High Accuracy Current Shunt Monitor	54.60
595-INA826EVM	INA826EVM	Evaluation Module for the INA826, Single and Dual, Low Power, Wide Supply Voltage Amplifier	27.85
595-INA827EVM	INA827EVM	Evaluation Module for INA827, advanced evaluation with two prototype areas	54.60
595-OPA2836IDGSEVM	OPA2836IDGSEVM	Evaluation Module for OPA2836, Dual DGS (10-lead VSSOP)	166.05
595-PCM2906CEVM-U	PCM2906CEVM-U	Evaluation Module for the PCM2906C, a Bus-Powered (500mA) USB Codec with an S/PDIF Interface	166.05
595-PCM9211EVM-U	PCM9211EVM-U	Evaluation Module for the PCM9211, a Digital Audio Interface Transceiver with Stereo ADC and Routing	54.60
595-TAS5614LADDVEVM	TAS5614LADDVEVM	Evaluation Module for TAS5614L, Integrated Stereo Feedback Digital Amplifier Power Stages	455.80
595-TAS5624ADDVEVM	TAS5624ADDVEVM	Evaluation Module for TAS5624, Integrated Stereo Feedback Digital Amplifier Power Stages	455.80
595-TAS5630DKD2EVM	TAS5630DKD2EVM	Evaluation Module for the TAS5630, an Analog Input Stereo Class D Amplifier with Integrated Feedback	444.68
595-TAS5715EVM	TAS5715EVM	Evaluation Module for the TAS5715, a 25W Stereo I2S Audio Amplifier with Speaker EQ, 2-Band DRC and DC protection	221.79
595-TAS5717EVM	TAS5717EVM	Evaluation Module for the TAS5717, a Digital Input Stereo Amplifier with integrated CAP free headphone amp	221.79
595-TAS5719EVM	TAS5719EVM	Evaluation Module for the TAS5719, a Digital Input Stereo Amplifier with integrated CAP free headphone amp	221.79
595-TAS5731EVM	TAS5731EVM	Evaluation Module for the TAS5731PHP, a 20W Stereo Class-D Audio Amplifier	221.79
595-TPA2025D1EVM	TPA2025D1EVM	Evaluation Module for the TPA2025D1, a mono 2.0 W Class-D Audio Amplifier	166.05
595-TPA6138A2EVM	TPA6138A2EVM	Evaluation Module for the TPA6138A2, a DIRECTPATH™ Headphone Driver with Adjustable Gain	110.34
595-TPA6139A2EVM	TPA6139A2EVM	Evaluation Module for the TPA6139A2, a DIRECTPATH™ 25mW Headphone Amplifier	110.34
595-THS770006EVM	THS770006EVM	Evaluation Module for the THS770006, a High-Speed Fully Differential ADC Driver Amplifier with Fixed Gain	110.34
595-THS770012EVM	THS770012EVM	Evaluation Module for the THS770012, a High-Speed Fully Differential ADC Driver Amplifier with 10-13dB Selectable Gain	110.34
595-LV320AIC1106EVMK	TLV320AIC1106EVM-K	Evaluation Module for the TLV320AIC1106, a PCM Codec with Microphone Amps and Speaker Driver	221.79
595-LV320AIC1110EVMK	TLV320AIC1110EVM-K	Evaluation Module for the TLV320AIC1110, a Programmable PCM Codec with Microphone Amps and Speaker Driver	221.79
595-LV320AIC3212EVMU	TLV320AIC3212EVM-U	Evaluation Module for TLV320AIC3212, a Low Power Stereo Codec	333.23
595-LV320AIC3262EVMU	TLV320AIC3262EVM-U	Evaluation Module for TLV320AIC3262, a Low Power Stereo Codec	333.23
595-TPA3117D2EVM	TPA3117D2EVM	Evaluation Module for the TPA3117D2, a 15W Filter-Free Stereo Class D Amplifier	166.05
595-MULTI-CAL-SYSTEM	MULTI-CAL-SYSTEM	A system of evaluation modules and accessories that can be used to calibrate multiple PGA308 sensor modules	1113.38
595-MULTICALSLAVEKIT	MULTI-CAL-SLAVEKIT	Evaluation Module for PGA308, a Single Supply, Auto-Zero Sensor Amplifier with Programmable Gain and Offset (Slave)	444.68

TriQuint SEMICONDUCTOR

GAIN BLOCK AMPLIFIERS

TriQuint's gain block amplifiers are a broad family of InGaP HBT general-purpose amplifiers offering superior dynamic range in low-cost, surface mount packages. These devices are designed to provide broadband gain at frequencies from DC to 6GHz. Targeted at telecommunications infrastructure and CATV markets, they can be directly applied to various current and next generation system applications wherever low-cost gain blocks are needed. Configured internally as Darlington pairs, these amplifiers are available in a variety of gain, power, and package combinations.

For quantities greater than listed, call for quote.

HIGH LINEARITY AMPLIFIERS

TriQuint offers an extensive range of highly linear amplifiers - the perfect choice for today's high data rate telecommunications systems. TriQuint's medium power amplifiers provide high reliability, high output IP3, low noise, and excellent linear figure of merit (LFOM = OIP3/DC power) in frequency ranges from 50-4000MHz. TriQuint's amplifiers are available in industry-standard green surface-mount packages.

For quantities greater than listed, call for quote.

POWER AMPLIFIERS

TriQuint's family of power amplifier ICs and modules features high efficiency and linearity in both 12V and 28V InGaP HBT processes. Power amplifier ICs developed on TriQuint's highly reliable 28V InGaP HBT process operate over a wide frequency range to include all the key cellular frequencies. The +12V InGaP HBT (GaAs) power amplifier modules are ideal for the PHS/PAS and PCS/UMTS markets and include internal matching for 50 Ohm.

CATV AMPLIFIERS

The AH2, AH22, and AG606 are general purpose amplifiers that are very well-suited for cable TV applications requiring gain flatness, high linearity, and wide bandwidth. Designed for 75 Ohm systems, these devices can operate from a single supply voltage and manufactured using TriQuint's highly reliable GaAs MESFET process. These products offer low noise performance and a high dynamic range. Other applications suitable for these products are cable modem and laser diode drivers. In addition, TriQuint has a wide variety of products that can be used for CATV transmission, headend, or STB applications.

DISCRETE AMPLIFIERS

TriQuint's discrete FETs meet today's demand for wireless receiver and transmitter applications. TriQuint's FETs deliver exceptional performance and high reliability and are the basic building blocks within TriQuint's amplifier products. TriQuint's FETs offer OEM's high efficiency, high-power and high-quality for wireless infrastructure applications. TriQuint's high dynamic range FETs are packaged in low-cost surface mount packages for customized design applications.

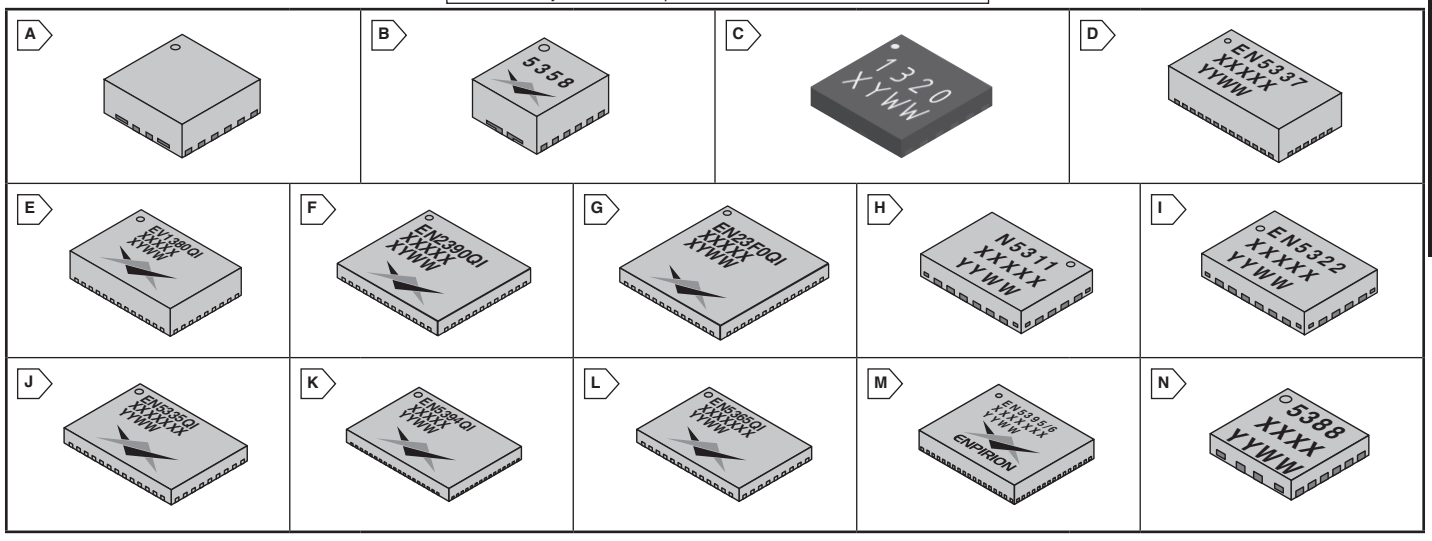
ENPIRION DC-DC Converters

Products may be RoHS compliant. Check mouser.com for RoHS status.



Enpirion is a provider of highly integrated power management solutions, and leverages advances in Power Semiconductor Devices and CMOS-compatible Magnetics to deliver the world's first complete DC-DC conversion in an IC package. Enpirion solutions reduce footprint by up to 70%, reduce parts count by as much as 60%, and dramatically ease the design constraints associated with switch-mode DC-DC converters.

Enpirion makes the industry's smallest Power System on Silicon (PSoS) - the first ultra-integrated all-silicon DC-to-DC converter, and the first to feature an integrated inductor. Enpirion's patented approach capitalizes on semiconductor geometry advances that enable a 10x switching-frequency improvement - integrating a PWM controller, power FETs, compensation circuitry, and magnetic components into a single turnkey IC package.

Enpirion manufactures a growing line of Switch-mode DC-DC converters with integrated inductor. Integration of the inductor sets Enpirion products apart from the competition. The layout and placement of the inductor is one of the most common reasons for power IC related failures. Enpirion solves this problem, reduces foot print, reduces part count, and reduces noise associated with switch-mode power conversion. Applications include high volume consumer products such as mobile phones, portable game players, MP3 and personal media players, as well as data networking, telecoms, user terminal equipment such as set top box, and of course notebook and desktop PC.

ENPIRION DC-DC BUCK (STEP-DOWN) CONVERTER

PRIMARY SIDE REGULATION (PSR) PWM CONTROLLERS

Fairchild Semiconductor's industry-leading portfolio of primary side regulation (PSR) PWM controllers offers designers of mobile chargers, adapters and LED lighting applications multiple solutions to meet the stringent power and regulatory specifications such as ENERGY STAR® Level V. Fairchild's PSR PWM controller portfolio, including the FSEZ1307, FSEZ1317 and FAN103, enhance Fairchild's extensive power offerings that enable efficient electronics and maximize energy savings in power-sensitive applications.

OFFLINE ICs - POWER SWITCH

The Fairchild Power Switch(FPS) product family is specially designed for an off line SMPS with minimal external components. The Fairchild Power Switch(FPS) consist of a high voltage power SenseFET and a current mode PWM IC.

Fairchild Power Switch Designer Software (10.5M)
This software currently only works with Windows 95 and Windows 98.
Available online at:

INFINEON Power Semiconductors

RoHS Compliant **This product is RoHS compliant.**

CONSTANT CURRENT RELAY DRIVERS

The IFX52001 is intended to drive relays with a constant current in order to reduce the coil current during relay hold phase. For relay activation, the IC pass element works as an activated switch for a limited period of time. After the activation time period has elapsed, the IC reduces the relay coil current to a lower constant value. Different operation modes allow adequate functionality also at very low or very high battery voltage.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Infineon Part No.	Package Type	Min. Hold Current (mA)	Relay Coil Inductance (mH)	Relay Series Resistance (Ω)	Supply Voltage (V)	Relay Freewheeling Resistor (Ω)	Price Each 1	10	100	500

DC/DC SWITCHING CONTROLLER

Features:
- High-efficiency regulators
- Wide supply voltage operation range
- Very low current consumption operation
- Suitable for standard 12V/24V PowerNets
- Disable function for main output
- Short-circuit protection
- Overtemperature protection
- Wide ambient operation range - 40°C up to +125°C

Applications:
- Automation
- Data Processing
- Electromobility
- Industrial
- Lighting
- Medical
- Motor Control & Drives
- Motorcycles, E-Bikes and Small Electric Vehicles
- Power Management
- Renewable Energy
- Smart Grid

For quantities greater than listed, call for quote.

LDO LINEAR VOLTAGE REGULATORS

Features:
- Low current consumption
- Overvoltage/Short-circuit protection
- Reverse polarity protection
- Overtemperature protection
- Load protection
- Pin-to-pin compatible to industry standard parts
- High input voltage rating: Up to 45V
- Very low dropout voltage
- Temp. range: –40°C up to +125°C

Applications:
- Automation
- Data Processing
- Electromobility
- Industrial
- Lighting
- Medical
- Motor Control & Drives
- Motorcycles, E-Bikes and Small Electric Vehicles
- Power Management
- Renewable Energy
- Smart Grid

For quantities greater than listed, call for quote.

POWER SEMICONDUCTORS FOR AUTOMOTIVE

Power Supplies

Voltage and current regulators from Infineon handle input voltages up to 65V and output currents up to 2.5A. A wide range of product solutions with quiescent currents down to 20µA, high accuracy outputs and various package and features options are available to address all automotive application needs.

For quantities greater than listed, call for quote.

INTEGRATED HIGH CURRENT MOTOR DRIVERS

Trilith IC - the Trilith IC family members combine two high-side and two low-side switches in one package. They are geared to drive high-current DC motors in an H-bridge configuration but can also be used as single independent switches.

For quantities greater than listed, call for quote.

INFINEON Power Semiconductors

RoHS Compliant **This product is RoHS compliant.**

SMART LOW SIDE SWITCHES

HITFET® - Fully Protected Universal Switches provide a higher level of protection with over temperature, short circuit, over current, overvoltage and END. HITFET® combines all these protection features in one easy-to-use device. With these features and Infineon's renowned quality and reliability you can be confident the HITFET® can meet even the most challenging application requirements.

SMART HIGH SIDE SWITCHES

The highly integrated PROFET® family (PROtected FET) incorporates a broad range of smart features. PROFET® intelligent power switches consist of a DMOS power transistor and CMOS logic circuitry for complete built-in protection. They offer protection against e.g. overload, over temperature, short circuit for all kinds of automotive and industrial applications.

SPDT RF SWITCHES

RF-Switches for Rx/Tx switching, band select or antenna diversity switching are used in almost every wireless application, like cellular phones, WLAN, WiMAX, GPS-navigation systems, bluetooth accessories or remote-keyless entry (RKE). Infineon RF Switches are manufactured in a unique RF-CMOS technology, combining the inherent advantages of CMOS technology with outstanding RF performance.

INTEGRATED POWER ICs

Highly suited for power supplies design in Consumer Appliances, CoolSET ® (Integrating Control IC and CoolMOS™ in one package) continues to mark a new dimension in design agility and miniaturization. The CoolSET ® F3 family provides the highest output power with the lowest losses available in industry.

For quantities greater than listed, call for quote.

POWER CONTROL ICs

By offering a wide variety of highly efficient control ICs we enable our customer to meet new demands like PFC regulations and ultra low standby power requirements in a very cost effective way. A comprehensive array of safety features helps to minimize the number of external components, reduces design in time and improves the reliability of the SMPS.

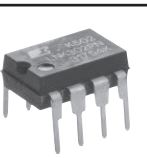
DIP-8



DIP-8B

SMD-8B

SENZERO® FAMILY - ZERO1 LOSS, AUTOMATIC X CAPACITOR DISCHARGE IC

Features:

- Eliminates significant standby losses
- Provides remote disconnect functionality
- Ultra low leakage
- Triggerable via remote-off signal/load conditions
- Withstands high differential surge conditions
- ACDC converters with high-voltage resistive signal paths

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Power Integrations Part No.	Package	Integrated Disconnect MOSFETs	Power Consumption (230VAC) (mW)	Bias Req'd	Price Each 1	25	100

LINKZERO FAMILY

Zero No-Load Consumption Integrated Off-Line Switcher

Features:

- Automatically enters zero input power mode when load is disconnected
- Detects load reconnection and automatically restarts regulation
- Suitable for low-cost clampless designs
- Universal input range allows worldwide operation
- Simple ON/OFF control, no loop compensation needed
- No-load consumption as low as 4mW at 230VAC input (IEC 62301 Clause 4.5 rounds standby power use below 5mW to zero.)
- Easily meets all global energy efficiency regulations with no added components

For quantities greater than listed, call for quote.

VERY LOW POWER AC-DC POWER CONVERSION (UP TO 6W)

LinkSwitch-CV

Features:

- Eliminates optocoupler and all secondary CV control circuitry
- Eliminates bias winding supply -IC is self biasing
- Compensates for external component temperature variations
- Tight IC parameter tolerances
- Continuous and/or discontinuous mode operation
- Frequency jittering
- Auto-restart protection
- Hysterectic thermal shutdown
- No load power consumption

For quantities greater than listed, call for quote.

LinkSwitch-XT

Features:

- Self Powered (LP and XT Series only)
- Auto Restart
- EcoSmart® Low Standby/No-Load Power Consumption
- Power Limiting
- Remote ON/OFF (LP and XT Series only)
- Thermal Shutdown - Hysteresis

For quantities greater than listed, call for quote.

POWER INTEGRATIONS LED Drivers and Discharge ICs

RoHS Compliant **This product is RoHS compliant.**

LINKSWITCH™- FAMILY

LED Driver IC, Single-Stage PFC, Primary-Side Contant Current Control and TRIAC Dimming/Non-Dimming Device Options

Features:
- LNK403-409 family is optimized for flicker-free operation in TRIAC dimming
- Single stage power factor corrected and accurate constant current (CC) output
- Eliminates optocoupler and all secondary current control circuitry
- Simple primary-side PWM dimming interface

Specifications:
- Operating Junction Temperature: -40°C to +150°C
- Bypass Pin Current: 100mA
- Breakdown Voltage: 725V
- Packaging: Tube

DIMENSIONS: in. (mm)

CAPZERO™ FAMILY

Zero Loss Automatic X Capacitor Discharge IC

Features:
- Blocks current through X capacitor discharge resistors when AC voltage is connected
- Simplifies EMI filter design - larger X capacitor allows smaller inductive components with no change in consumption
- Only two terminals - meets safety standards for use before or after system input fuse
- Self supplied - no external bias required.

Specifications:
- Lead Temperature: 260°C
- <5mW consumption at 230VAC for all X capacitor values
- Packaging: Tube and Tape/Reel

DIMENSIONS: in. (mm)

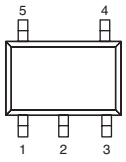
SEIKO INSTRUMENTS Voltage Detectors

RoHS Compliant This product is RoHS compliant.

SII HIGH PRECISION VOLTAGE DETECTORS

SOT-23-5

Top View



S-1000 Series

The S-1000 series is a series of high-precision voltage detectors developed using CMOS process. The detection voltage is fixed internally with an accuracy of ±1.0%. It operates with low current consumption of 350nA typ.

- Ultra-low current consumption 350nA typ. (VDD = detection voltage + 1.5V)
- High-precision detection voltage ±1.0%
- Operating voltage range 0.95 to 5.5V
- Hysteresis characteristics 5% typ.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Seiko Part No.	Package Type	Output Form	Detection Voltage (V)	Hysteresis Width (V) (Typ.)	Current Consumption (μA) (Typ.)	Price Each 1	100	500	1000

S-801 Series

The S-801 series is a series of high-precision voltage detectors with a built-in delay time generator of fixed time developed using CMOS process. The detection voltage is fixed internally, with an accuracy of ±2.0%. Internal oscillator and counter timer can delay the release signal without external parts.

- Ultra-low current consumption: 1.3μA Typ. (at VDD = 3.5V)
- High-precision detection voltage: ±2.0%
- Delay times: 100ms Typ.
- ON/OFF switch of delay time (DS pin)
- Operating voltage range: 0.95V to 10.0V
- Detection voltage: 2.2V to 6.0V (0.1V step)

For quantities greater than listed, call for quote.

S-808 Series

The S-808xxC series is a series of high-precision voltage detectors developed using CMOS process. The detection voltage is fixed internally with an accuracy of ±2.0%. Ultra-low current consumption and miniature package lineup can meet demand from the portable device applications.

- Ultra-low current consumption: 1.3μA Typ. (at VDD = 1.5V) (Products with detection voltage of 1.4V Typ. or less)
  0.8μA Typ. (at VDD = 3.5V) (Products with detection voltage of 1.5V Typ. or less)
- High-accuracy detection voltage: ±2.0%
- Operating voltage range: 0.65V to 5.0V (Products with detection voltage of 1.4V Typ. or less)
  0.95V to 10.0V (Products with detection voltage of 1.5V Typ. or less)
- Hysteresis characteristics: 5% Typ.

For quantities greater than listed, call for quote.

S-809 Series

The S-809xxC series is a high-precision voltage detector developed using a CMOS process. The detection voltage is fixed internally, with an accuracy of ±2.0%. A time delayed reset can be accomplished with the addition of an external capacitor.

- Ultra-low current consumption: 1.0μA Typ. (at VDD = 2.0V); Detection voltage: less-than or equal to 1.4V
  1.1μA Typ. (at VDD = 3.5V); Detection voltage: greater-than or equal to 1.5V
- High-precision detection voltage: ±2.0%
- Operating voltage range: 0.7V to 10.0V
- Detection voltage: 1.3V to 6.0V (0.1V step)
- Hysteresis characteristics: 5% Typ.

For quantities greater than listed, call for quote.

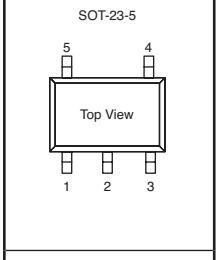
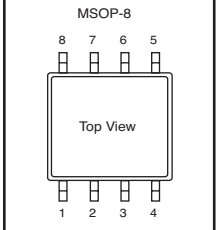
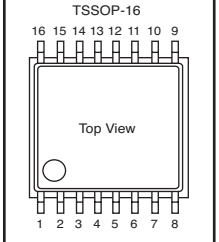
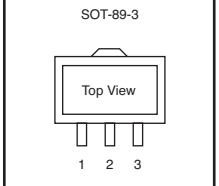
SEIKO Battery Protection ICs and Voltage Regulators

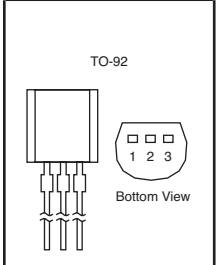
RoHS Compliant **This product is RoHS compliant.**

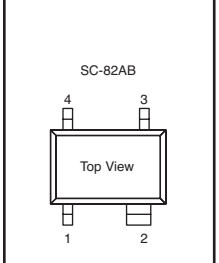












BATTERY PROTECTION ICS

S-8241 Series for 1-Cell Batteries

The S-8241 Series is a protection IC for lithium-ion/lithium polymer rechargeable batteries and includes a high precision detection circuit and a delay circuit. It is the optimal IC for protection against overcharge, overdischarge and overcurrent in 1-cell lithium-ion/lithium polymer rechargeable battery packs.

For quantities greater than listed, call for quote.

S-8242B Series for 2-Serial Cell Batteries

The S-8242B Series is a protection IC for 2-serial cell lithium-ion/lithium polymer rechargeable batteries and includes a high precision detection circuit and a delay circuit. These ICs are suitable for protecting 2-cell rechargeable lithium-ion/lithium polymer battery packs from overcharge, overdischarge and overcurrent. **For quantities greater than listed, call for quote.**

S-8244 for 1-Serial to 4-Serial Cell Batteries

The S-8244 Series is used for secondary protection of lithium-ion rechargeable batteries with one to four cells and includes a high precision voltage detector circuit and a delay circuit. Short circuits between cells accommodates series connection of one to four cells.

For quantities greater than listed, call for quote.

S-8254 Series for 3-Serial or 4-Serial Cell Pack Batteries

The S-8254 Series is a protection IC for 3-serial or 4-serial cell lithium-ion rechargeable batteries and includes a high precision detection circuit and a delay circuit. It protects both 3-serial or 4-serial cells using the SEL pin for switching.

For quantities greater than listed, call for quote.

HIGH PRECISION VOLTAGE REGULATORS

S-812 Series

The S-812 Series is a three-terminal positive voltage regulator made using the CMOS process. Since this has higher precision output voltage and consumes less current than existing three-terminal voltage regulators, battery-powered portable equipment can have a higher performance and a longer service life.

For quantities greater than listed, call for quote.

S-814 Series

The S-814 Series is a low dropout voltage, high output voltage accuracy and low current consumption positive voltage regulator developed utilizing CMOS technology. Built-in low ON-resistance transistors provide low dropout voltage and large output current. A power-off circuit ensures long battery life. Various types of output capacitors can be used in the S-814 Series compared with the past CMOS voltage regulators. (i.e., small ceramic capacitors can also be used in the S-814 Series). These are recommended to be used for configuring portable devices and large output current applications, respectively.

For quantities greater than listed, call for quote.

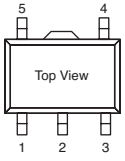
SOT-89-5



S-818 Series

The S-818 Series is a positive voltage regulator developed utilizing CMOS technology featured by low dropout voltage accuracy and low current consumption. Built in low ON-resistance transistor provides low dropout voltage and large output current. A ceramic capacitor of 2uF or more can be used as an output capacitor. A power-OFF circuit ensures long battery life. The packages available are recommended for configuring portable devices and large output current applications. **For quantities greater than listed, call for quote.**

S-L2980 Series

The S-L2980 series is a low dropout voltage regulator designed for use in battery powered devices and developed using CMOS technology. On-chip low on-resistance on-resistance transistor can provide low dropout voltage and large output current. A power-off switch ensures long battery life. Various types of output capacitors can be used in the S-L2980 series compared with the former CMOS voltage regulators. A small ceramic capacitor can also be used.

For quantities greater than listed, call for quote.

PWM CONTROLLED STEP-UP SWITCHING REGULATORS

S-8330 Series

The S-8330 Series is a CMOS PWM control step-up switching regulator which mainly consists of a reference voltage source, an oscillation circuit, a power MOSFET and an error amplifier. The new output voltage can adjust by a built-in electronic volume circuit and is equipped with a shutdown function. It is a low current consumption device because of the CMOS structure. A step-up switching regulator can be constructed by externally connecting only a coil, a capacitor and a diode.

S-8351 Series, PFM

The S-8351 Series is a CMOS PFM-controlled step-up switching regulator that mainly consists of a reference voltage source, an oscillator, and a comparator. The PFM controller allows the duty ratio to be automatically switched according to the load (light load: 50%, high output current: 75%), enabling products with a low ripple over a wide range, high efficiency, and high output current. With the S-8351 Series, a step-up switching regulator can be configured by using an external coil, capacitor, and diode. The built-in MOSFET is turned off by a protection circuit when the voltage at the CONT pin exceeds the limit to prevent it from being damaged. This feature, along with the mini package and low current consumption, makes the S-8351 Series ideal for applications such as the power supply unit of portable equipment.

For quantities greater than listed, call for quote.

S-8353 Series, PWM

The S-8353 Series is a CMOS step-up switching regulator which mainly consists of a reference voltage source, an oscillation circuit, a power MOSFET, an error amplifier, a phase compensation circuit and a PWM controller. The step-up switching regulator can be configured simply by attaching a coil, capacitor, and diode externally. In addition to the above features, the small package and low power consumption of this series make it ideal for portable device applications requiring high efficiency. The S-8353 Series realizes low ripple, high efficiency, and excellent transient characteristics due to its PWM controller, which can vary the duty ratio linearly from 0% to 83% , optimally-designed error amplifier, and phase compensation circuits.

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	Seiko Part No.	Package Type	Output Voltage (V)	Maximum Duty Ratio (%)	Oscillation Frequency (kHz) (Typ.)	Current Consumption Operating (μA) (Typ.)	Current Consumption Shutdown (μA) (Max.)	Price Each 1	100	500

S-8354 Series, PWM/PFM

The S-8354 Series is a CMOS step-up switching regulator which mainly consists of a reference voltage source, an oscillation circuit, a power MOSFET, an error amplifier, a phase compensation circuit, and a PWM/PFM switching controller. The step-up switching regulator can be configured simply by attaching a coil, capacitor, and diode externally. In addition to the above features, the small package and low power consumption of this series make it ideal for portable device applications requiring high efficiency. The PWM/PFM switching controller that can switch the operation to a PFM controller with a duty ratio is 15% under a light load to prevent a decline in the efficiency due to the IC operating current.

S-8521 SERIES, PWM/PFM CONTROLLED STEP-DOWN SWITCHING REGULATOR/CONTROLLERS

The S-8521 Series consists of a CMOS step-down switching regulator/controllers with PWM/PFM-switched control. These devices contain a reference voltage source, oscillation circuit, error amplifier and other components. It works in either PWM control or PFM control and can switch from one to the other. It normally operates using PWM control with a duty ratio of 25% to 100%, but under a light load, it automatically switches to PFM control with a duty ratio of 25%. This ensures high efficiency over a wide range of conditions, from standby mode to operation of peripheral equipment. With the addition of an external P-Channel MOSFET or PNP transistor, a coil, capacitors and a diode connected externally, these can function as step-down switching regulators.

For quantities greater than listed, call for quote.

SILICON LABS Digital Isolators

RoHS Compliant **This product is RoHS compliant.**

ISOPRO UNIDIRECTIONAL DIGITAL ISOLATORS

Features:
- 5kV, 2.5kV and 1kV isolation ratings
- High integration: up to 6 isolation channels in a single package
- High-speed operation: DC–150Mbps
- Wide operating supply voltage: 2.7V-5.5V
- Low power
- Transient immunity: >25kV/µs
- No start-up initialization required
- Precise timing
  - Less than 10ns propagation delay
  - 2ns pulse width distortion
  - 1ns channel-channel matching
  - 2ns pulse width skew
- Enable controlled outputs
- DC correct

Applications:
- Example circuit applications
  - Isolation
  - Level shifting
  - Ground loop elimination
- Example end applications
  - Isolated analog data acquisition
  - Operator interface controls
  - AC-DC and dc-dc switching supplies
  - Plasma TVs
  - USB/CAN/I²C networks
  - Isolated point-to-point communications
  - Motor control
  - UPS systems

For quantities greater than listed, call for quote.

634-SI840XI2C-KIT	SI840XI2C-KIT	Evaluation kit provides a convenient engineering break out board for easy evaluation of the SI840x series of I2C isolators.										42.80	

BI-DIRECTIONAL I²C COMPATIBLE DIGITAL ISOLATORS WITH UNIDIRECTIONAL DIGITAL CHANNELS

The Si86xx family is the industry's highest performing, widest channel count series of unidirectional and bidirectional isolators supporting up to 5kV and reinforced isolation ratings.
Based on Silicon Labs' patented isolation technology, Si86xx isolators enable robust operation in harsh industrial applications.

For quantities greater than listed, call for quote.

SMART ON/OFF CONTROLLERS

◆ **Surface Mount Devices**

For quantities greater than listed, call for quote.

MOUSER STOCK NO.	STM Part No.	Package Type	Supply Current (Typ.) (mA)	Product Selector						Price Each		
				EN or EN(1)	Setting After Long Push (2)	Power-On Lock-Out Volt (V)	Forced Power-Off Volt (V)	TON BLANK at Start-Up (Min.) (s)	TON BLANK at Reset (Min.) (s)	1	10	100
◆ 511-STM6600AS24DM6F	STM6600AS24DM6F	TDFN-12	6	EN	RST	3.4	-----	5.6	5.6	1.90	1.63	1.33
◆ 511-STM6600CS25DM6F	STM6600CS25DM6F	TDFN-12	6	EN	EN	3.4	-----	11.2	11.2	1.90	1.63	1.33
◆ 511-STM6600DA55DM6F	STM6600DA55DM6F	TDFN-12	6	$\overline{EN}$	EN	2.5	-----	11.2	11.2	1.90	1.63	1.33

(1) EN (or $\overline{EN}$) output is push-pull. $\overline{RST}$, $\overline{INT}$, $\overline{PB}_{OUT}$ and $\overline{VCC}_{LO}$ outputs are open drain.

(2) After t_{SRD} expires through long push, either device reset ($\overline{RST}$) will be activated for t_{REC} (240 ms min.) or the EN (or $\overline{EN}$) pin will be deasserted. The additional Smart Reset™ delay time, t_{SRD}, can be adjusted by the user at 10 s/µF (typ.) by connecting the external capacitor to the C_{SRD} pin.

LOW POWER VOLTAGE DETECTORS

For quantities greater than listed, call for quote.

511-EVAL6574B	EVAL6574B	L6574 and L6561, 15.6V Electronic Ballast with PFC Evaluation Board	28.09
511-EVL6564H-100W	EVL6564H-100W	L6564H, 90 to 265VAC 100W PFC Pre-Regulator Evaluation Board	83.46
511-EVL6699-150W-SR	EVL6699-150W-SR	L6699, 12-150W, Resonant Converter w/Synch Rectification Eval Board	176.61
511-EVL6699-90WADP	EVL6699-90WADP	L6699, 19-90V, Adapter with PFC Eval Board	147.18
511-EVAL6902D	EVAL6902D	L6902D, 8V to 25V, 1A Stepdown Switching Regulator Evaluation Board	14.05
511-EVAL6924U	EVAL6924U	L6924, 4.2V, 1A USB Battery Charger Evaluation Board	14.05
511-EVALPRACTISPIN	EVALPRACTISPIN	L6207, 5V PractiSPIN Motor Driver evaluation and Demonstration System	42.14
511-EVALST7590-1	EVALST7590-1	ST7590, 3.3V STM32 Demostration Board	280.88
511-EVALTSM1052	EVALTSM1052	TSM1052, 90V to 264V Ultra Small battery Charger Evaluation Board	14.05
511-EVALVIPER17L-7W	EVALVIPER17L-7W	VIPer17, 90V to 265V High Voltage Converter PWM Controller and MOSFET Demonstration Board	77.24
511-EVL170W-FTV	EVL170W-FTV	AN3329, 100VAC to 230VAC, 6A 170W Power Supply with PFC and Standby Supply Demonstration Board	267.50
511-EVL6562A-35WFLB	EVL6562A-35WFLB	L6562A, 90V to 265V 35W Wide-Range High Power Factor Flyback Converter Demostration Board	80.25
511-EVL6562A400W	EVL6562A400W	L6562A, 90V to 265V 400W Wide-Range Input, PFC Pre-Regulator Evaluation Board	105.33
511-EVL6563S-400W	EVL6563S-400W	L6563S, 400W FOT-controlled PFC Pre-Regulator Demonstration Board	160.50
511-EVL6591-90WADP	EVL6591-90WADP	L6591, 12V, 7.5A 90W AC-DC Asymmectrical Half-Bridge Adapter Evaluation Board	105.33
511-EVLALTAIR05T-5W	EVLALTAIR05T-5W	ALTAIR05T, 90V to 264V , 45-65Hz, 5W Wide Range CV-CC Optoless Adapter Evaluation Board	26.75
511-EVLALTAIR900-M1	EVLALTAIR900-M1	ALTAIR05T, 90V to 264V, 45-65Hz 7.5W Double Output SMPS for Power Line Evaluation Board	27.82
511-EVLVIPER28H-10W	EVLVIPER28H-10W	VIPer28HN, 85V to 265V, AC/DC Evaluation Board	77.24
511-EVLVIPER28L-10W	EVLVIPER28L-10W	VIPer28LN, 85V to 265V, 60kHz Isolated Flyback with Extra Power Management Demonstration Board	77.24
511-STEVAL-IHM033V1	STEVAL-IHM033V1	STM32F100CB Motor Control w/Serial Communication User Interface Demonstration Board	83.74
511-STEVAL-IHM035V1	STEVAL-IHM035V1	STGIPN3H60 Motor Control SLLIMM™ Demonstration Board	165.92
511-STEVAL-IHM036V1	STEVAL-IHM036V1	STGIPN3H60 LP Motor Control SLLIMM™ Demonstration Board	175.15
511-STEVAL-IHT001V2	STEVAL-IHT001V2	STM8S Cold Thermostat Kit	263.63
511-STEVAL-IHT007V1	STEVAL-IHT007V1	STM8S Discovery Kit Ext. Eval Board	116.31
511-STEVAL-ILB009V1	STEVAL-ILB009V1	STD3N62K3 Electronic Lamp Ballast with Active PFC Demonstration Board	154.54
511-STEVAL-ILD003V1	STEVAL-ILD003V1	TS820 Wall Dimmer CFL LED 220V Demonstration Board	108.55
511-STEVAL-ILD003V2	STEVAL-ILD003V2	TS820 Wall Dimmer CFL LED 110V Demonstration Board	110.10
511-STEVAL-ILH004V1	STEVAL-ILH004V1	L6382D5, 85V to 265V, 70W Electronic Ballast for Metal Halide Lamp Demonstration Board	150.12
511-STEVAL-ILH005V2	STEVAL-ILH005V2	L6562A, 185VAC to 265VAC 150W Electronic Ballast for HID Lamps Demonstration Board	-
511-STEVAL-ILL038V1	STEVAL-ILL038V1	L6585DED 90VAC to 265VAC, 2.08A LED Resonant Driver Demonstration Board	148.64
511-STEVAL-ILL041V1	STEVAL-ILL041V1	L6564 LED Driver US Solution Demonstration Board	88.39
511-STEVAL-IME003V1	STEVAL-IME003V1	STHV748 High Voltage Pulser Demostration Board	323.68
511-STEVALIPB001V1	STEVALIPB001V1	UC3845B, STC04IE170 150V to 1200V, 2W 3-Phase Breaker Single-Output SMPS Demonstration Board	82.19
511-STEVAL-IPE002V1	STEVAL-IPE002V1	Electricity Meter (mono phase) Measurement Board with 2 Current Transformers Evaluation Board	130.60
511-STEVAL-IPE003V1	STEVAL-IPE003V1	Electricity Meter (mono phase) Measurement Board with 1 Current Transformer and Shunt Evaluation Board	98.31
511-STEVAL-IPE010V2	STEVAL-IPE010V2	STPMC1, Energy Meter Motherboard Demostration Kit	114.06
511-STEVAL-IPE011V1	STEVAL-IPE011V1	STPMS1 Energy Meter Daughterboard Demonstration Kit	56.18
511-STEVAL-IPE012V2	STEVAL-IPE012V2	STPM10, STM8L152 Single Phase Energy Meter Demonstration Board	91.50
511-STEVAL-IPE015V1	STEVAL-IPE015V1	STPM10 Single-Phase 2 Trans Demonstration Board	93.05
511-STEVAL-IPE016V1	STEVAL-IPE016V1	STPM10 Single-Phase 1 Trans 1 Shunt Demonstration Board	82.19
511-STEVAL-IPE017V1	STEVAL-IPE017V1	STPM10 Single-Phase 1 Shunt Demonstration Board	75.33
511-STEVAL-IPE018V1	STEVAL-IPE018V1	STPM10 Single-Phase 1 Trans Demonstration Board	85.29
511-STEVAL-IPP001V2	STEVAL-IPP001V2	ST7580, Power Line Communication Demostration Board	287.56
511-STEVAL-ISA006V1	STEVAL-ISA006V1	VIPer12AS, 90V to 264V 6W Non-Isolated Flyback Topology Power Supply Evaluation Board	33.73
511-STEVAL-ISA010V1	STEVAL-ISA010V1	VIP16L, 85VAC to 500VAC, Ultra Wide Range Dual Output Back Converter Demonstration Board	56.50
511-STEVAL-ISA020V1	STEVAL-ISA020V1	VIPer12AS-E, 88V to 264V, 3.5W Battery Charger Demonstration Board	33.73
511-STEVAL-ISA035V1	STEVAL-ISA035V1	VIPer22A-E, 85V to 264V, Non-Isolated Offline Power Supply Demonstration Board	64.61
511-STEVAL-ISA044V5	STEVAL-ISA044V5	ST1S10, 3A Step-Down Regulator Demostration Board	54.78
511-STEVAL-ISA044V6	STEVAL-ISA044V6	ST1S10, 3A Step-Down Regulator Demostration Board	54.78
511-STEVAL-ISA059V1	STEVAL-ISA059V1	TSM108, 6V, 800mA, DC-DC Converter Demonstration Board	87.08
511-STEVAL-ISA068V1	STEVAL-ISA068V1	ST1S32 4A, 1.5MHz Step-Down Synch Switching Regulator Demonstration Board	71.90
511-STEVAL-ISA069V1	STEVAL-ISA069V1	ST1S31, 3A Step-Down Synch Switching Regulator Demostration Board	58.42
511-STEVAL-ISA070V1	STEVAL-ISA070V1	ST1S31, 3A Step-Down Synch Switching Regulator Demostration Board	38.95
511-STEVAL-ISA071V2	STEVAL-ISA071V2	VIPer16, 4W Non-Insulated, Wide Input Voltage Range Demostration Board	41.73
511-STEVAL-ISA076V2	STEVAL-ISA076V2	L6924U, 12V, USB Compatible Battery Charger Demostration Board	63.34
511-STEVAL-ISA077V1	STEVAL-ISA077V1	L6920DB, 5.5V, 750mA High Efficiency Synchronous Retifier Step-Up Converter Demonstration Board	47.94
511-STEVAL-ISA079V2	STEVAL-ISA079V2	L6928 DC-DC Monolithic Synch Step-Down Regulator Demonstration Board	47.94
511-STEVAL-ISA082V1	STEVAL-ISA082V1	ST1S40IPHR, 4V to 18V, 800kHz Fixed-Frequency PWM Synchronous Step-Down Demonstration Board	65.06
511-STEVAL-ISA083V1	STEVAL-ISA083V1	ST1S40IPUR, 4V to 18V, 4A, 800kHz Fixed Frequency PWM Synchronous Step-Down Demonstration Board	70.19
511-STEVAL-ISA084V1	STEVAL-ISA084V1	ST1S40, 4V to 18V, 4A, 800kHz Fixed Frequency PWM Synchronous Step-Down Demonstration Board	65.06
511-STEVAL-ISA088V1	STEVAL-ISA088V1	L5970D, 1A Step-Down Regulator Eval Board	54.78
511-STEVAL-ISA089V1	TEVAL-ISA089V1	L5972, 1.5A Step-Down Regulator Eval Board	54.78
511-STEVAL-ISA091V1	STEVAL-ISA091V1	L7980, 4.5V to 28V, 2A Step-Down Switching Power Supply Demonstration Board	46.22
511-STEVAL-ISA092V1	STEVAL-ISA092V1	L980A, 4.5V to 28V, 2A Step-Down Switching Demonstration Board	46.22
511-STEVAL-ISA093V1	STEVAL-ISA093V1	L7981, 4.5V to 28V, 3A Step-Down Switching Power Supply Demonstration Board	46.22
511-STEVAL-ISA094V1	STEVAL-ISA094V1	L7981, 4.5V to 28V, 3A Step-Down Switching Power Supply Demonstration Board	46.22
511-STEVAL-ISA096V1	STEVAL-ISA096V1	Viper06 Non-Isolated SMPS Buck-Boost Demonstration Board	59.92
511-STEVAL-ISA097V1	STEVAL-ISA097V1	L7985, 2A Step-Down Switching Power Supply Demostration Board	36.17
511-STEVAL-ISA098V1	STEVAL-ISA098V1	L7985A, 2A Step-Down Switching Power Supply Demostration Board	36.17
511-STEVAL-ISA099V1	STEVAL-ISA099V1	L7986, 2A Step-Down Switching Power Supply Demostration Board	36.17
511-STEVAL-ISA101V1	STEVAL-ISA101V1	L5973D 4-36V Step-Down Switching Regulator	60.05
511-STEVAL-ISA102V1	STEVAL-ISA102V1	L6562A 80W High Performance Transition Mode PFC Demonstration Board	77.04
511-STEVALISC001V1	STEVALISC001V1	L6565, 88V to 264V, 30W AD-DC Adapter Evaluation Board	82.86
511-STEVAL-ISV005V2	STEVAL-ISV005V2	SPV1020, 240W Photovoltaic Battery Charger Demostration Board	87.63
511-STEVAL-ISV012V1	STEVAL-ISV012V1	SPV1040, L6924D, Solar Demonstration Battery Board	80.64
511-STEVAL-ISV014V1	STEVAL-ISV014V1	SPV1040, STBC21, STC3100 3W, USB Battery Charger Demonstration Board	154.54
511-STEVAL-ISV018V1	STEVAL-ISV018V1	SPV1020 300W, 120V PV Converter, Photovoltaic Panel Demonstration Board	139.56
511-STEVAL-PCC015V1	STEVAL-PCC015V1	Full Speed, USB to RS-232 Bridge Demonstration Board	59.92
511-STEVAL-PCC009V2	STEVAL-PCC009V2	STM32F103VB, 2V to 3.6V, IBU Universal Interface Board	70.19
511-STEVAL-PCC009V4	STEVAL-PCC009V4	STM32F103RBT6 USB Universal Interface Serial Bridge Demonstration Board	53.07
511-STEVAL-PCC011V1	STEVAL-PCC011V1	ST802RT1B, 3.3V Ethernet PHY Demonstration Board	191.33
511-STEVAL-PCC012V1	STEVAL-PCC012V1	STM32F107, 7V to 35V, Connectivity Gateway Demonstration Board	208.99
511-STR91X-SK/IAR	STR91X-SK/IAR	ST912FAW4, IAR KickStart Starter Kit, with USB-JTAG Debugger and 32KB IAR Software	351.76
