SBR® SUPER BARRIER RECTIFIERS

A ground breaking innovation in rectifier technology that uniquely captures the benefits provided by the pn-junction diode and the Schottky Barrier diode and integrates them into a single component. State-of-the-art integrated circuit wafer processing technology has allowed the design and manufacturability of a device, which is able to integrate and improve the benefits of the two existing rectifier technologies into a single device.

ZETEX LOW LEAKAGE SCHOTTKY RECTIFIER DIODES

Zetex has strengthened its current Schottky range with the introduction of 4 new surface mount, high current, very low leakage, fast switching Schottky diodes which complement the existing low VF, ZHCS series (ideal for lower temperature operation). These new low leakage diodes are ideally suited to address applications requiring efficient operation at higher temperatures, often a significant limitation of conventional Schottky types. The ZLLS series diodes are provided in choice of packages which relate directly to die size and IF performance ensuring that designers have the optimum choice of package size / performance / cost.

Features:
- VR -40V
- Very low VF at high temperature operation (above 85°C)
- Very low leakage capability in all packages
- High temperature operation of ZLLS diodes compliment the existing range of ZHCS series (optimized for operation at lower temperatures)

Applications:
- Automotive power conversion
- DC conversion (telecom DC modules)
- Charging circuits
- High frequency rectification
- Motor control
- Battery powered equipment

ESD AND EMI PROTECTION DEVICES AND FILTERS

The Infineon solutions for ESD and EMI-protection are divided into two families. First, the ESDxx-series, our discrete and robust TVS diode arrays for ESD-, EFT- and surge protection and second the Infineon HiPAC, or BGFxx-series, that offer ESD and EMI protection. Our TVS-diode arrays and Infineon HiPAC products are characterized by low clamping voltage and high robustness. As for all Infineon products, this ESD/EMI-protection devices come with the same superior quality level and benefit from the advantages that only a proven high volume system supplier can provide.

POWER INTEGRATIONS Diodes

RoHS Compliant **This product is RoHS compliant.**

QSPEED™ Q-SERIES DIODES

Utilizing proprietary Qspeed technology these devices have the lowest Q_{RR} of any 300V or 600V Silicon diode. Its recovery characteristics increase efficiency, reduce EMI and eliminate snubbers. They are optimized for the lowest possible losses at operating frequencies above 80kHz. It porovides a very low QRR at a resonable forward voltage and allows designers to substaintially reduce switching loss in high frequency applications.

Features:
- Low Q^{RR}, Low I_{RRM}, Low t_{RR}
- High dIF/dt capable (1000A/μs)
- Soft recovery

Benefits:
- Increases efficiency
- Eliminates need for snubber circuits
- Reduces EMI filter component size and count
- Enables extremely fast switching

Applications:
- Power Factor Correction (PFC) Boost Diode
- Motor drive
- DC-AC Inverters
- Output Rectification

INFINEON Intelligent Power Modules and Transistors

RoHS Compliant **This product is RoHS compliant.**

CIPOS™ INTELLIGENT POWER MODULES

CIPOS™ power modules increase energy efficiency and reliability of home appliance motors. The CIPOS™ modules incorporate a three-phase inverter power stage with a SOI (Silicon-On-Insulator) gate driver, boot strap diodes and capacitors, and auxiliary circuitry in a compact, high-performance, fully isolated package. Based on a combination of Infineon's leading-edge TRENCHSTOP™ IGBT (Insulated Gate Bipolar Transistor) and emitter controlled diode technology, they eliminate as many as 23 discrete components compared to a design based on discrete components. The CIPOS™ modules also offer the industry's lowest junction-to-case resistance, which increases output current by up to 20 percent compared to other available modules.

RF POWER TRANSISTORS

M/A-COM Technology Solutions offers a broad range of RF power transistor products--discrete devices, modules, and pallets from 1 MHz to 3.5 GHz. Our high power transistors are ideal for avionics, communications, radar, and industrial, scientific, and medical applications. We use gold metallization as well as aluminum fabrication processes. Our engineering team can help solve your unique requirements with custom solutions.

M/A-COM Technology Solutions offers a new family of Gallium Nitride (GaN) RF power transistors and pallets. This product family targets L- and S-Band pulsed radar applications and leverages M/A-COM Tech's rich heritage of providing both standard and custom solutions to meet the most demanding customer needs. Benefits of M/A-COM Tech's GaN products include high breakdown voltage, superior power density, and higher and broader frequency operation than Silicon.

SMALL SIGNAL MOSFETS

Our small signal portfolio is specially suited for low power applications, e.g. for fast switching applications, or applications where low leakage current is required. We offer devices with breakdown voltages from 55V to 800V, in a broad variety of packages (green packages also available). Reliability and ruggedness define the performance of Infineon Small Signal MOSFETs.

SINGLE N-CHANNEL SUPERMESH™ MOSFET FAMILY

The SuperMESH™ family has built-in, back-to-back Zener diodes between the gate and source terminals. These Zener diodes improve resistance to destructive electrostatic discharges as well as protecting the gate oxide against damage from spurious voltage spikes. Because they are built-in, they preclude the need for external protection diodes.

DUAL N-CHANNEL ENHANCEMENT MODE MOSFETS

These ST Dual N-channel STripFETTM Power MOSFETs are produced in a unique "single feature size" strip-based process. The resulting transistor shows extremely high packing density for low on-resistance, rugged avalanche characteristics and less critical alignment steps therefore a remarkable manufacturing reproducibility.

IGBT INTELLIGENT POWER MODULES (IPM)

IGBT intelligent power modules (IPMs) extend ST's appliance control product range with a thermally efficient solution that simplifies design by combining application specific IGBTs and diodes, proprietary control functions, smart protections and extra optional features. Directly connected to the microcontroller, IPMs convert microcontroller output into the correct high-power waveform to drive the motor. One module can replace more than 30 discrete components, thereby increasing reliability while reducing size and cost.

SUPERTEX DEPLETION MODE N-CHANNEL MOSFETS

Advanced Vertical DMOS Technology N-Channel Depletion Mode Vertical DMOS FETs

These depletion-mode (normally-on) transistors utilize an advanced vertical DMOS structure and Supertex's well-proven silicon-gate manufacturing process. This combination produces devices with the power handling capabilities of bipolar transistors and with the high input impedance and positive temperature coefficient inherent in MOS devices. Characteristic of all MOS structure, these devices are free from thermal runaway and thermally-induced secondary breakdown. Supertex's vertical DMOS FETs are ideally suited to a wide range of switching and amplifying applications where high breakdown voltage, high input impedance, low input capacitance, and fast switching speeds are desired.

Features:
- High input impedance
- Low input capacitance
- Fast switching speeds
- Low on resistance
- Free from secondary breakdown
- Low input and output leakage

Applications:
- Normally-on switches
- Solid state relays
- Converters
- Constant current sources
- Power supply circuits
- Telecom

For quantities greater than listed, call for quote.

BOURNS Thyristor Surge Protectors

BOURNS®

RoHS Compliant This product is RoHS compliant.

BOURNS TISP THYRISTOR OVERVOLTAGE PROTECTORS

Continuing to provide the most complete solutions to your circuit protection needs, Bourns recently introduced the TISP® line of products. The TISP® products are specially designed to provide protection for telecommunications equipment in instances where high voltages occur as a result of lightning strikes, power line crosses or a/c power surges. Coupled with Bourns' Mulifuse® PPTC overcurrent protectors and Bourns, Line Protection Networks, the TISP® products offer telecom customers a more comprehensive total protection product line.

Bidirectional Thyristor Surge Protector

This TISP® device series protects central office, access and customer premise equipment against overvoltages on the telecom line. These devices are housed in a through-hole DO-92 package (TO-92 package with cropped center leg).

PORTNOTE SOLUTION DESIGN KITS

NEW PRODUCT

The Bourns PortNote ™ Solutions Circuit Protection Design Kits are organized and focused on the protection of ports and their variations, rather than on product types. PortNote Kits are available for datacom, audio, video, and telecom solutions. Each kit contains enough Bourns product to build five of the PortNote Solution circuits.

In addition, each Bourns PortNote™ Solutions Circuit Protection Design Kit provides a simple, single page with essential information to provide an effective solution known to work in most typical applications. Information provided includes objectives, part numbers, compliance, schematic, and much more.

LOW-CAPACITANCE TRANSIENT-SURGE ARRESTORS

The ETP01 series is a low-capacitance TRISIL transient-surge arrestor designed to protect high data-rate communication networks. The planar technology used combines a high surge capability to comply with Telcordia GR-1089 intrabuilding and ITU-T K20/21 standards, and low capacitance to avoid distortion of high-speed signals such as with Ethernet.

◆Surface Mount Device

ESD protection diodes combined with an EMI filer network serve as a discrete but stong "bodyguard" against these hazards. Protection devices such as very fast Zener and Avalanche diodes draw a very low leakage current when placed in front of sensitive electronic gates. But above the defined voltage working range, any transient voltage that approaches the breakdown voltage will be short-circuited by the diodes so it cannot reach the gate.

MULTILAYER BI-DIRECTIONAL TRANSIENT VOLTAGE SUPPRESSORS

The Controlled Capacitance TransGuard is an application specific bi-directional transient voltage suppressor developed for use in mixed signal environments. The Controlled Cap MLV has three purposes: 1). Reduce emissions from a high speed ASIC, 2) prevent induced E fields from conducting into the IC, and 3) clamp transcient voltages.

STATICGUARD SERIES MULTILAYER CERAMIC TRANSIENT VOLTAGE SUPPRESSORS

The StatidGuard MLV Transient Voltage Suppressors provid ESD protection for CMOS, Bi Polar and SiGe based systems. Typical ESD failure voltage for CMOS and/or Bi Polar is ≥ 200V.15kV ESD pulse (air discharge) per IEC 1000-4-2, Level 4, generates < 20 millijoules of energy. The AVX StaticGuard MLV Transient Voltage Suppressors offer low capacitance (<200pF) for high-speed data transmission and offer low leakage current (IL) for battery operated equipment.

For quantities greater than listed, call for quote.

AVX MINIATURE CAN BUS VARISTOR

PRODUCT NEW

The CAN BUS and FlexRay varistor is a zinc oxide (ZnO) based ceramic semiconductor device with non- linear voltage-current characteristics (bi-directional) similar to back-to-back Zener diodes and an EMC capacitor in parallel (see equivalent circuit model). They have the added advantage of greater current and energy handling capabilities as well as EMI/RFI attenuation. Devices are fabricated by a ceramic sintering process that yields a structure of conductive ZnO grains surrounded by electrically insulating barriers, creating varistor like behavior.

EPCOS CeraDiodes, Gas Discharge Tubes, and Varistors

Products may be RoHS compliant. Check mouser.com for RoHS status.

RELIABLE ESD PROTECTION

CeraDiodes are ceramic semiconductors optimized specifically for high performance in ESD applications. They have a non-linear voltage/current characteristic for effectively suppressing extremely fast voltage transients and offer superior parametric stability over the complete operating range of -40°C to +85°C.
CeraDiodes are bi-directional devices. A single CeraDiode connected from signal/data line to ground routes both positive and negative ESD transitions safely to the ground plane. This technique eliminates the need to route ESD charge into the power plane, possibly damaging nearby integrated circuits. CeraDiodes for high-speed lines exhibits a very low capacitance designed for maximum ESD protection combined with minimal signal distortion.

Features:
- Bi-directional ESD protection to IEC 61000-4-2 (level 4)
- Suitable for uni- and bi-directional lines
- Bi-directional ESD protection in a two-pin line
- Routes all ESD events, both positive and negative, safely to ground
- USB 2.0 compliant
- Extremely fast response time < 0.5ns
- Lead-free nickel barrier terminations suitable for lead-free soldering
- RoHS-compatible

Applications:
- Interfaces (e.g. audio and video, USB, IEEE 1394, Ethernet, DVI)
- EDP products (e.g. desktop and notebook computers)
- Peripherals (e.g. printers, memory cards, etc.)
- Portable handheld products (e.g. PDA)
- Mobile communication
- Consumer products (Flat TVs, set top boxes, MP3 players, digital cameras, etc.)
- Liquid crystal displays (LCD)/monitors

Note:
CeraDiodes are not suitable for switching applications or for voltage stabilization, where static power disspation is required.

RoHS Compliant

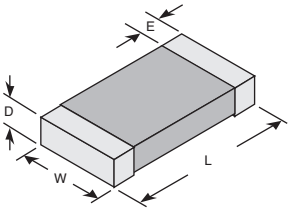
RoHS Compliant This product is RoHS compliant.

Littelfuse SURFACE MOUNT ML SERIES VARISTORS

The ML Series family of Transient Voltage Surge Suppressions devices is based on the Littelfuse Multilayer fabrication technology. These components are designed to suppress a variety of transient events, including those specified in IEC 61000-4-2 or other standards used for Electromagnetic Compliance (EMC). The ML Series is typically applied to protect integrated circuits and other components at the circuit board level.



Features:

- Leadless Chip Size: 0402, 0603, 0805, 1206 and 1210
- Multilayer Ceramic Construction Technology
- Operating Temperature Range: -55°C to +125°C
- Operating Voltage Range: V_M(DC) = 3.5V to 120V

Applications:

- Suppression of inductive switching or other transient events such as EFT
- Provides on-board transient voltage protection for ICs and transistors
- Used to help achieve electromagnetic compliance of end products
- Replace larger surface mount TVS Zeners in many applications

RoHS Compliant **This page of product is compliant.**

PTC SMD THERMISTORS

The new superior series of EPCOS SMD PTC thermistors for limit temperature measurement are available in case sizes 0402, 0603 and 0805. Compared to the standard series, these components employ a more homogenous ceramic material, which enables them to exhibit excellent performance in reliability tests and be reflow and wave-soldered at temperatures of up to 280 °C. They have been qualified based on AEC-Q200 Rev-C and satisfy the rigorous requirements for use in automotive electronics applications involving frequent and rapid temperature changes.

PTC thermistors are ceramic components whose electrical resistance rapidly increased when a certain temperature is exceeded. This material property is used in countless applications in today's electrical and electronic engineering, for example as resettable fuses against current overload or as sensors that detect local overheating. Here the focus is on PTC Thermistors that are designed for over heat sensing.

Features:
- Qualification based on AEC-Q200 rev. C
- Suitable for reflow and wave soldering (up to 280°C)
- Fast and reliable response
- UL Approval to UL 1434 expected 2010

Specifications:
- Max. Operating Voltage: 32
- Operating Temperature Range: -40°C to +125°C
- Wide range of temperatures between 70°C and 145°C in steps of 10K

Applications:
- DC/DC converters

INRUSH CURRENT LIMITERS

Limiters protect against extremely high peak inrush current, especially in AC/DC switching power supplies. These NTC thermistors effectively control surge currents because the thermal time constant of the current limiter is longer than the electrical time constant (RC) of the thermistor and the capacitor.

Also available, by special order, with kinked leads.

MURATA POSISTOR® FOR OVERCURRENT PROTECTION

PTGL Series

The Murata PTC Thermistors - POSISTOR® - are Positive Temperature Coefficient Thermistors. The PTC Thermistors resistance rises sharply when its temperature exceeds a specific temperature. These characteristics make Murata PTC POSISTORs ideal for circuit protection in a variety of applications, such as temperature sensor and temperature compensation, and for current control in common household appliances, humidifiers, facsimile, copies, dryers of all kinds, refrigerators, freezers and air conditioners.

MURATA POSISTOR® CIRCUIT PROTECTION FOR OVERHEAT SENSING LEAD TYPE AND LUG-TERMINAL

PTFL and PTFM Series

PTFM Series has been developed for protecting power overheating and also for sensing the temperature of other components which may be overheated. The "POSISTOR" offers excellent temperature sensing ability, exhibiting a steep change in electrical resistivity near the temperature setting. PTFL series is suitable for use as an air temperature sensor.

Features:
- PTFM Series is a screw-fixing type and PTFL Series is a lead type, providing ease of mounting.
- Compact and light design as well as excellent thermal response.
- Solid-state construction withstands mechanical vibration and impact sufficiently.
- Contactless operation provides a prolonged service life, yet permits noiseless operation.
- The operating point of "POSISTOR" is set on the steepest point along the resistance-temperature characteristic curve, thus performing the overheat protective operation securely.
- PTFM Series and PTFL Series have the same temperature characteristic, providing a selection depending on the mounting method.

TE Connectivity resettable fuses utilize a polymer based, positive temperature coefficient (PTC) material to protect electrical circuits against overcurrent conditions. In normal operations, the PTC has many conductive paths and a very low resistance. In overcurrent conditions, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. Once the cause of the initial overcurrent condition is eliminated, the PTC cools down and RESETS to a low resistance value permitting the normal current to resume.

RGE SERIES
