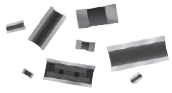
KRL SERIES

This new series will extend the resistance range from the existing RL/PRL series down to 1mΩ. The KRL series has also improved TCR to as low as +/-50ppm/oC. The new KRL series are targeted for the latest improved amplifiers that control small amounts of current and are sensitive to small changes of voltage. KRL series will make the current sensing resolution significantly higher than before.



Features:

- No hot Spots
- Low ESL (low noise)
- Low TCR 50ppm
- High operating temperature up to 170˚C
- Face down mounting offers accurate sensing and higher reliability (no cracking issues)

SUSUMU Low ESL Current Sensing Chip Resistors

SUSUMU
THIN FILM TECHNOLOGY
Thin Film Specialist and Innovator

PRL SERIES

Current sensing low resistance chip resistors have become indispensable components for the power management of mobile and other devices. The requirements for such resistors used to be tight tolerance, small TCR, high power, and small size; however, as signal processing speed and switching frequency have increased, parasitic noise for these components has become a significant issue.

The PRL series, Susumu's long side terminal current sensor chip resistors, has shorter and wider resistive elements compared to their conventional short side terminal counterparts. Due to this reason, they have much less parasitic inductance (ESL), hence, less noise (see Figure 1). Figure 2 shows the pulse shape with a longer side terminal chip (Picture 2) versus a shorter side terminal ship. The reduction of noise in the longer side terminal chip is demonstrated in pulse shape.

Features:
- Power/Size: 0.33W/0603, 0.66W/0805, 1W/1206, 2W/2512
- No hot spots (smallest size for required wattage)
- Long side termination style
- Low ESL – (<1nH, typical 0.5nH) low noise supplying ripple-free signals
- Low TCR (50ppm) and tight resistance tolerance (1%)

SUSUMU Thin Film Chip Resistors

SSM THIN FILM TECHNOLOGY SUSUMU
Thin Film Specialist and Innovator

RG SERIES

Susumu's proprietary NiCr based alloy exhibits excellent TCR Characteristics as compared to other resistive materials such as tantalum nitride. Despite the belief that NiCr thin film has reliability issues, especially in humid environment, Susumu has developed technologies to apply an inorganic passivation that acts as a hermetic seal, and our ultimate thin-film resistors, RG series, far exceed thick film resistor reliability, reaching 0.01fit (=10 parts per trillion) RG series thin-film chip resistors boast high precision, near zero TCR and unprecedented reliability with all the benefits of thin film resistors!

Susumu's typical resistive thin film is 20-200nm thick whereas thick film resistors can be up to 50um thick Moreover, thin film is deposited using molecular processes such as sputtering and plasma enhanced chemical vapor deposition, whereas thick film is made of screen printed metal particles suspended in polymer. This fundamental difference results in the clear advantage of thin film resistors in performance. Susumu's thin film resistors has better high frequency characteristics (no skin effect: resistance change due to high frequency), low noise due to the evenness of thin film, and high resistance accuracy due to precise trimming of the thin film. The RG series combines the merit of such thin film performance with robustness and reliability that exceed thick film resistors.

Features:
- Various standard sizes: 0402, 0603, 0805
- Operating Temperature Range: -55ºC to +155ºC (100% power at 85ºC)
- Tolerance/TCR: 0.02%/5ppm, 0.05%/10ppm, 0.1%/25ppm
- Superior reliability: less than 0.1% drift after 10000 hours of high temp.exposure (155ºC) or high temp/humidity bias (85ºC/85%RH)
- Can be used in 3 different power ratings (low, regular, and high) based on customer needs

Environmental Tolerance:
- Sulfur resistant
- High Operating temperature
- Dust/oil/chemical resistance
- Vibration resistant

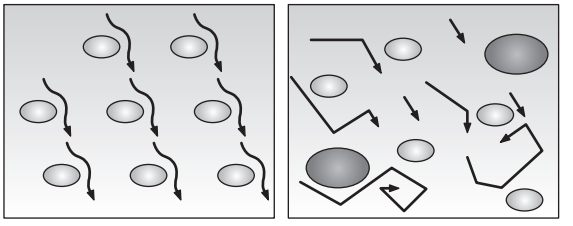
Current Noise Comparison



Electrons move smoothly without much dispersion that creates noise.

Electrons move randomly creating noise.

- ISO 9001 (1994)
- Transfer molding process insures a good humidity seal and permanent compression fit of the concentric resistive element

Heat Dissipation:
While the use of proprietary heat sinks with lower thermal resistance is acceptable, uprating is not recommended. For maximum heat transfer it is recommended that a heat sink compound be applied between the resistor base and heat sink/chassis mounting surface. It is essential that the maximum hot spot temperature of 200°C is not exceeded and therefore the resistor must be mounted on a heat sink of correct thermal resistance for the power being dissipated.

Maximum Overload:
Please consult the factory for assistance concerning your particular overload application.

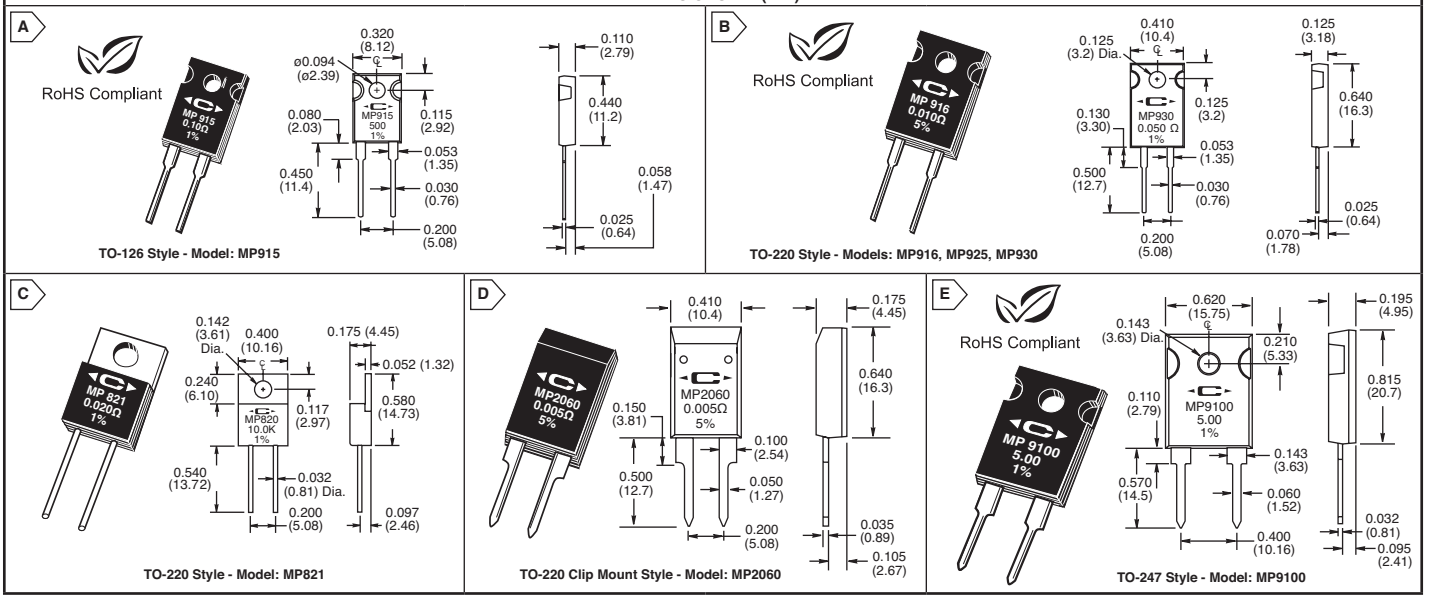
CADDOCK 15W-100W Power Film Resistors

DIMENSIONS: in. (mm)



MP SERIES

Non-Inductive, Heat Sink Mount TO-126, TO-220 and TO-247 Packages

Features:

- Non-Inductive Design, Ideal for Power Switching Circuits, Snubbers, RF Applications: 50Ω performance up to 500MHz
- Values as low as 0.005Ω ideal for Current Sensing in Power Supplies, Motor Controls, and Battery Charging Circuits
- Resistor Element Electrically Isolated from the Ceramic Heat Dissipating Mounting Surface (1500V ACrms)
- 1% Tolerance for most resistance values

✻ Power Ratings are based on +25°C Case Temp.:

The case temp. is used to establish the max. applied power, see Derating Curve. The case temp. measurement is made with a thermocouple contacting the bottom mounting surface of the package (center of heat dissipating ceramic), the device mounted on the heat sink with thermal grease. See Mounting Note.

Without a Heat Sink:

When in free air at +25°C the MP Series have the following power ratings:
MP915: 1.25W MP916, MP925, MP930: 2.25W; MP2060: 2.5W MP9100: 3.5W

Mounting Note:

Mount on a smooth, clean, and flat heat sink surface with a thermal interface material such as thermal grease. The entire exposed ceramic area must be in contact with the heat sink. For additional technical information please refer to the Caddock Applications Notes for the MP Series available online at www.caddock.com.

Screw Mounting:

The use of a compression washer (Belleville type) is recommended. The compression washer must provide a force of 150 to 300lbs. Recommended mounting torque is 6in-lbs. Maximum mounting torque to avoid damage to the package is 8in-lbs.

Clip Mounting:

Recommended Clip Force is 8 to 35lbs applied to the center of the package. The clip should be smooth to avoid any point concentrations of pressure.

CADDOCK MP725 D-PAK STYLE POWER FILM RESISTORS

DIMENSIONS: in. (mm)

RoHS Compliant

Features:

- Non-Inductive Design
- Values as Low as 0.020Ω
- Resistor Electrically Isolated from Heat Sink

Specifications:

- Power Rating: 25W at +25°C Case Temp. (see Derating Note for Power Rating)
- Temp. Coeff. ΔR taken at +150°C, ref to +25°C
  0.50Ω to 1.00 KΩ: -20 to +80ppm/°C
  0.050Ω to 0.49Ω: 0 to +200ppm/°C
  0.020Ω to 0.049Ω: 0 to +300ppm/°C

✻Derating Note: The case temperature is to be used for purposes of establishing the maximum applied power. See Derating Curve. The case temperature measurement is made on the metal mounting tab against the molded body. Derate appropriately for the ambient temperature range, the thermal resistance of the mounting surface, and the temperature limitations of the adjacent materials (such as glass epoxy). The Thermal Resistance (film to case) is 5.00°C/W. For additional technical information refer to the Applications Note at www.caddock.com. Power dissipation is 2.5 watts, at an ambient temperature of 25°C, when mounted on a standard pcb (ex. FR-4 or G-10) with double sided copper board (2 ounce) 1 inch X 1 inch X .063 inch (thick).

Soldering Note: The case temperature of the MP725 should not exceed +219°C during reflow soldering or any other soldering process. See the applications note at **caddock.com** for more information.

OHMITE - 30 SERIES - 5% HIGH ENERGY WIRE WOUND RESISTORS - 3, 5 AND 10 WATT

Ohmite Manufacturing's family of High Energy Wirewound Resistors employ special winding techniques to maximize the effective joule rating of each resistor. Ohmite High Energy Wirewounds are hand wound in order to maintain the tightest possible pitch (space between windings) and thereby maximize the mass of the resistive element

AVEZ SERIES 105°C ALUMINUM ELECTROLYTICS - LOW IMPEDANCE

Type AVEZ Capacitors are rated for 1000 hours at 105ºC with low impedance characteristics. They are ideal for high density PC board packaging. The Type AVEZ offers a low in-place-cost for a high quality performer. The vertical cylindrical cases facilitate automatic mounting and reflow soldering into the same footprint of like-rated tantalum capacitors except without the need for voltage derating. Type AVEZ is RoHS compliant.

RoHS Compliant

KEMET 125°C Low ESR Aluminum Organic Capacitors

The Capacitance Company
KEMET CHARGED.

RoHS Compliant **This product is RoHS compliant.**

KEMET's A700 Series, targets power management applications. With aluminum as the anode material, aluminum oxide as the dielectric, and a conductive polymer to replace the wet electrolytic historically used in aluminum capacitors, KEMET has advanced beyond existing aluminum organic capacitors. The KEMET A700 Series AO-CAP is also an ideal alternative to high-capacitance ceramics. Its outstanding high frequency performance helps reduce component counts, cost-effectively saving board space.

Features:

- Extremely low ESR
- High capacitance retention for superior performance at high operating frequencies
- Non-ignition failure mode
- No "dry-out" or "wear-out" related failure mechanism
- No voltage derating up to +125°C
- True surface-mount capability
- Overall lower placement costs
- PB free
- Self healing mechanism
- MSL3 packaging

KMH 105°C SNAP MOUNT HIGH CAPACITANCE SERIES

The KMH series are the standard 105°C, large capacitance, snap-in capacitors. The very high CV values and ripple current capabilities make these capacitors ideal for use in power supply filter circuits. The standard KMH capacitors are non-solvent proof and are not recommended when halogenated cleaning solvents are used.

Specifications:

- Operating temperature range: -40°C to +105°C for 6.3VDC to 100VDC, -25°C to +105°C for 160VDC to 450VDC
- Rated lifetime: 2,000 hours @ +105°C

For quantities greater than listed, call for quote.

SMH 85°C SNAP MOUNT HIGH CAPACITANCE SERIES

The SMH series are the standard 85°C, large capacitance, snap-in capacitors. The very high CV values and ripple current capabilities make these capacitors ideal for use in power supply filter circuits. The standard SMH capacitors are non-solvent proof and are not recommended when halogenated cleaning solvents are used.

Specifications:

- Operating Temperature range: -40°C to +85°C for 6.3VDC to 100VDC, -25°C to +85°C for 160VDC to 450VDC
- Rated lifetime: 2,000 hours @ +85°C

TAIYO YUDEN SUPERCAPACITORS

NEW SUPPLIER

LIC Series Cylinder Type Lithium Ion Capacitors

Features:

- Lithium Ion Capacitor (LIC) is one of the Hybrid Capacitors to which the reaction of EDLC and that of lithium-ion battery are adopted.
- LIC applies the reaction of the lithium-ion battery with anode, therefore it has extremely large capacitance.
- The technique of doping lithium-ions to the anode previously (predoping) makes a cell voltage of 3.8V attainable.
- In spite of a high output voltage, damages to the electrodes can be repressed because of low electrode's potential due to pre-doping technique. Therefore LIC shows excellent performance of cycle life.

Applications:

- Storage power source combined with solar cell, fuel cell, generator.
- Main power source for small devices
- Load charge leveling

PAS Series Cylinder Type Radial Capacitors

Features:

- PAS can store a large number of ions into its amorphous structure (doping), therefore PAS capacitor has much larger apacitance than conventional electric double layer capacitors.
- Quick-charge with ampere measure is possible with its low internal resistance.
- Operating temperature range: -25°C to +60°C
- Tolerance: 20%

Applications:

- Back-up power source for CPU, microcomputer, and flash memory writing when shutting off the power.
- Load change leveling (life lengthening of main power source such as dry battery, Lithium primary battery).
- Power source storage combined with solar cell, fuel cell and generator.
- Main power source for small devices (Measuring equipments, toys)

These high-frequency, low ESR EDLC's from Cellergy are capable of storing large amounts of energy and utilize aqueous component technology that is environmentally friendly and non-toxic. Cellergy's Super-Capacitors were designed to act as a bridge between electrolyte capacitors and batteries and offer high power relative to batteries as well as produce a high current pulse. In addition, these Super-Capacitors are used to extend the lifetime of a battery for maximum exploitation and extend secondary battery operation. Cellery offers four Super-Cap footprints, which include the smallest footprint on the market and in the world (12x12.5mm) for space-limited applications, in both flat lead "F" and surface mount "L" versions.

Characteristics:
- Operating Temperature Range: -40˚C to 70˚C
- Uneffected by humidity
- High density energy storage
- High capacitance in smallest footprint available
- Capable to deliver high instantaneous current
- Nearly infinite discharge/charge cycle

Applications:
- Medical
- Consumer
- RF
- Backup or current booster for mechanical applications
- Energy havesting

MAXWELL Ultracapacitors

RoHS Compliant **This product is RoHS compliant.**

Maxwell TECHNOLOGIES
Enabling Energy's Future™

PC SERIES 10F ULTRACAPACITORS

Maxwell's UL recognized PC10 ultracapacitor is ideal for consumer electronics, automotive subsystems, wireless transmission, medical devices, automatic meter readers, and many other applications requiring a pulse of energy that cannot be efficiently provided by a battery or power supply alone. The PC10 works in tandem with batteries for applications that require both a constant low power discharge for continual function and a pulse power for peak loads. In these applications, the device relieves batteries of peak power functions resulting in an extension of battery life and a reduction of overall battery size and cost. The PC10 is also an ideal source of back-up and pulse power. It can provide extended power availability, allowing critical information and functions to remain available during dips, sags, and outages in a power supply or battery change. And, like all BOOSTCAP products, the PC10 is capable of accepting charges at the identical rate of discharge.

Features and Benefits:
- Over 500,000 duty cycles
- 10 year life capability
- Hermetically sealed, stainless steel construction
- Low profile prismatic design
- Higher energy vs. electrolytic capacitors
- Higher power vs. batteries
- UL recognized
- RoHS compliant

Applications:
- Automatic meter readers
- Automatic subsystems
- Back up power for soft shut down requirements
- Digital cameras and consumer electronics
- Wireless transmissions
- NASA space qualified

MODULES

16/48/56 Volt Power Module

The Power-type ultracapacitor product line gives customers in the automotive and transportation sector a much wider range of choices to meet their energy storage and power delivery requirements. The modules are specifically engineered for hybrid vehicle drive trains, automotive subsystems and other heavy duty applications that require the lowest equivalent series resistance (ESR) and highest efficiency available. In addition to meeting or exceeding demanding automotive and transportation application requirements for both watt-hours of energy storage and watts of power delivery per kilogram, all of these products will perform reliably for more than one million discharge-recharge cycles. The proprietary architecture and material science on which BOOSTCAP® products are based enable continued leadership in controlling costs, flexibility in product offerings and allow application specific performance tailoring. The cells used in the modules operate at 2.7 volts, enabling them to store more energy and deliver more power per unit volume than any other commercially available ultracapacitor products.

KEMET 150° ULTRA STABLE X8R DIELECTRIC

KEMET's Ultra Stable X8R Dielectric features a 150°C maximum operating temperature, offering the latest in high temperature dielectric technology and therefore a reliable choice for extreme temperature applications. It offers the same temperature capability as conventional X8R, but without the capacitance loss due to applied DC voltage. Ultra Stable X8R exhibits no capacitance loss and is a suitable replacement for higher capacitance and larger footprint devices that fail to offer capacitance stability. Product applications include harsh environments such as Down Hole (Oil Exploration), Automotive (Under Hood), Military and Aerospace.

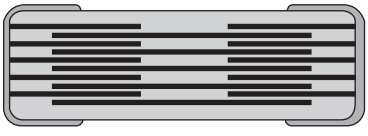
FAIL-SAFE FLOATING ELECTRODE MLCC WITH FLEXIBLE TERMINATION FF-CAP

The FF-CAP incorporates two existing KEMET technologies; Floating Electrode (cascading electrodedesign) and Flexible Termination. The floating electrode component of these capacitors yields improved voltage and ESD performance over standard designs, and also mitigates the risk of low IR or short circuit failures associated with mechanical flex cracks. The flexible termination component incorporates a measure of flexibility to the capacitor, shifting flex stress away from the ceramic body and into the termination area. The combination of these technologies ensures an increased measure of protection from board flex,offering up to 5mm of flex-bend capability. This provides for an enhanced level of mechanical flex crack protection for low to mid capacitance part types.

FF-CAPs technology combination will ensure an increased measure of protection from board flex, offering up to 5mm of flex-bend capability. This provides customers an enhanced level of mechanical flex crack protection for low- to mid-capacitance part types and complements KEMET's current Open Mode, Floating Electrode and Flexible Termination technologies. In addition, the new product meets the requirements of the Automotive Electronics Council's AEC-Q200-Rev C and is being offered with 100 percent pure matte tin-plated terminations that allow for excellent solderability.



Features:
- Operating range: -55°C to +125°C with no-bias capacitance shift limited to ± 15% over that range
- Insulation resistance (IR) measured after 2 minutes at rated voltage @ 25°C: Limit is 1,000 megohm microfarads or 100 gigohm, whichever is less
- Capacitance and dissipation factor (DF) measured at 1kHz and 1 Vrms

DF Limits are:

50 - 250 Volts	2.5%
16 - 25 Volts	3.5%
6.3 - 10 Volts	5.0%

KEMET Ceramic Capacitors

The Capacitance Company KEMET CHARGED.

RoHS Compliant **This product is RoHS compliant.**

FAIL-SAFE FLOATING ELECTRODE MLCC/FE-CAP

The FE-CAP is a surface mount multilayer ceramic capacitor which utilizes a floating internal electrode design, wherein the electrodes are configured to form multiple capacitors in series within a single MLCC package. This not only yields improved voltage and ESD performance over standard designs, but also mitigates the risk of low-IR or short-circuits failures that can occur due to board flex. The FE-CAP is being offered in case sizes ranging from EIA 0402 to EIA 1812 with rated voltages ranging from 6.3VDC to 250VDC. Combined with the stability of an X7R dielectric, the FE-CAP offers a flex-robust solution at low to mid-range capacitance values and an operating temperature range of -55°C to +125°C with zero bias capacitance shift limited to ±15% over that range. These components are widely used in critical application where mechanical stress is a concern. When flexed to mechanical failure the floating electrode design of the FE-CAP eliminates the current path between positive and negative poles. Absence of this current path reduces the probability of a short-circuit condition. All FE-CAP products meet the requirements of the Automotive Electronics Council's AEC-Q200-Rev C and come with 100% pure matte, tin-plated terminations for superior solderability. All parts are environmentally friendly, in compliance with RoHS legislation and are capable of Pb-free reflow profiles.

KEMET OPEN MODE DESIGN CAPACITORS

KEMET's open-mode ceramic surface mount capacitor is designed to significantly minimize the probability of a low IR or short circuit condition when forced to failure in a board flex situation.

Application Note:

- Input side filtering (power plane/bus)
- High current applications (battery line)
- Circuits that cannot be fused to open when short circuits occur due to flex cracks

Features (Exceptions):

- 0805 thickness target: .9mm (104 cap code=1.25mm)
- 1206 thickness target: .9mm (474 and 105 cap code=1.6mm)
- 1210 thickness target: 100v (474 cap code=1.85mm) 50V, 104 cap code=.95mm 50V, 474 cap code=1.25mm 50V, 684 cap code=1.55mm
- 1812 thickness target: 474 and 104, cap code=1mm 25V and 50V, 105 cap code=1.7mm 100V, 105 cap code=2.0mm
- Tolerance: 10%

Electrical:

- Operating range -55°C to 125°C

SYFER FLEXICAP™ SMD Ceramic Capacitors

RoHS Compliant **This page of product is compliant.**

SYFER CAPACITORS

Developed and marketed by Syfer in 2001, FlexiCap™ flexible termination has been on PC boards for tens of thousands of operating hours. No other flexible termination on the market has a track record as long as Syfer's. An estimated 99% of all ceramic chip failures are due to mechanical flex. FlexiCap™ is applied to the device under the standard nickel barrier finish to accommodate a greater degree of board bending than conventional capacitors. FlexiCap™ will virtually eliminate mechanical flex cracking problems. FlexiCap™ is RoHS compliant and compatible with both leaded and lead-free solder processes.

Features:
- Allows a greater degree of PCB deflection, typically twice that of standard MLCCs
- FlexiCap termination does not affect electrical characteristics or performance of the devices which can be used with no changes to the manufacturing process
- More resistant to temperature cycling

Specifications:
- Operating range: -55°C to +125°C (max. capacitance change: ±15%)
- Insulation resistance: 100 gigohm or 1000s, whichever is less
- Dissipation factor: <0.025
- Dielectric strength with voltage applied for 5 seconds: ≤ 200 Volts: 2.5 times; 500 & 630 Volts: 1.5 times; ≥ 1 kV: 1.25 times

Markets:
- Power supplies: DC-DC converters, UPS systems
- Telecom: Backplanes, linecards, modems, and base stations
- Lighting ballasts
- Industrial

Applications:
- Can be used in all designs currently using standard MLCCs
- Suggested for high stress, critical circuit applications

RoHS Compliant

AVX Feedthru 0805/1206 Capacitors

RoHS Compliant **This product is RoHS compliant.**

The Feedthru Capacitor Array contains four elements with a common ground connection. This makes them an ideal choice for multi-line designs needing EMI suppression, broadband I/O filtering or Vcc power line conditioning. Additional benefits are reduced component count and PCB space savings. The unique construction provides low parallel inductance and offers excellent decoupling capability for all high di/dt environments. It provides significant noise reduction in digital circuits to <5GHz.

RoHS Compliant

AVX SMD LOW INDUCTANCE CAPACITORS IDC (INTERDIGITATED CAPACITORS)

General Description:

- Very low equivalent series inductance (ESL), high speed decoupling capacitor in 0612 and 0508 case size
- Measured inductances of 60pH (for 0612) and 50pH (for 0508) are the lowest in the FR4 mountable device family
- Opposing current flow creates opposing magnetic fields causing the fields to cancel, effectively reducing the equivalent series inductance
- Perfect solution for decoupling high speed microprocessors by allowing the engineers to lower the power delivery inductance of the entire system through the use of eight vias
- Overall reduction in decoupling components due to very low series inductance and high capacitance

Specifications:

- Capacitance tolerance: ±20% preferred (10% available)
- Operating temperature range: X7R= -55°C to +125°C, X5R= -55°C to +85°C
- Temperature coefficient: ±15% (0VDC)
- Dissipation factor: 4V, 6.3V = 6.5% max; 10V = 5.0% max; 16V = 3.5% max , or 1,000MΩ per μF min., whichever is less
- Dielectric strength: No problems observed after 2.5 x RVDC for 5 seconds at 50mA max current

AVX LOW INDUCTANCE LGA CAPACITORS

AVX has introduced a revolutionary new capacitor for low inductance LGA (land grid array) capacitors have virtually the equivalent high frequency performance of 8-terminal ICDs (Inter-Digitated Capacitors) but are built in a simplified 2 terminal package. This provide for lower manufacturing cost and easier handling and design. LGA are ideal for decoupling in semiconductor package-level and board-level applications.

AVX MH CERAMIC CAPACITORS

Lead Free Ceramic Capacitor in Molded SM Leadframe

AVX are pleased to introduce the MH range of multilayer ceramic capacitors. The MH components are surface mount molded parts with a multilayer ceramic insert. MH capacitors combine the ceramic attributes of very low ESR, non polar construction, excellent high frequency behavior, excellent voltage stress capabilities and wide temperature range; with the enhanced mechanical protection of a molded case. The MH range provides a lead free solution to customers who have previously been unable to use large case ceramic capacitors because of mechanical stressing concerns.

PRODUCT NEW

RoHS Compliant

AVX Corporation has supported the automotive industry requirements for multilayer ceramic capacitors consistently for more than 10 years. Products have been developed and tested specifically for automotive applications and all manufacturing facilities are QS9000 and VDA 6.4 approved.

As part of AVX's sustained investment in capacity and state of the art technology, they are now transitioning from the established Pd/Ag electrode system to a Base Metal Electrode system (BME).

AVX is using AECQ200 as the qualification vehicle for this transition. A detailed qualification package is available on request and contains results on a range of part numbers including:

- X7R dielectric components containing BME electrode and copper terminations with a Ni/Sn plated overcoat
- C0G/NP0 dielectric components containing Pd/Ag electrode and silver termination with a Ni/Sn plated overcoat

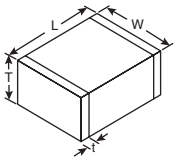
AVX Tip and Ring MLCC and Thin Film Directional Couplers

RoHS Compliant **This product is RoHS compliant.**

TIP AND RING MLCC

AVX "tip & ring" or "ring detector" multilayer ceramic chip capacitors are designed as a standard telecom filter to block -48 Volts DC telephone line voltage and pass subscriber's AC signal pulse (16 to 25Hz, 70 to 90Vrms). The ringer capacitors replace large leaded film capacitors and are ideal for telecom/modem applications. Using AVX "tip & ring" capacitors not only saves valuable real estate on the board and reduces the weight of overall product, but also features standard surface mounting capabilities, so critical to new and compact designs. The AVX "tip & ring" capacitors are offered in standard EIA sizes and standard values. They offer excellent high frequency performance, low ESR and improved temperature performance over film capacitors.



RoHS Compliant

HIGH VOLTAGE MLC CHIPS TIN/LEAD TERMINATION "B"

Larger physical sizes than normally encountered chips are used to make high voltage MLC chip product. Special precautions must be taken in applying these chips in surface mount assemblies. The temperature gradient during heating or cooling cycles should not exceed 4°C per second. The preheat temperature must be within 50°C of the peak temperature reached by the ceramic bodies through the soldering process. Chip sizes 1808 and larger should be reflow soldered only. Capacitors may require protective surface coating to prevent external arcing.

KEMET TIP AND RING SMD CERAMIC CHIP CAPACITORS

KEMET's 250VDC or Tip & Ring MLCC capacitors are designed and rated for telecommunication ringer circuits where the capacitor is used to block -48 to -52VDC of line voltage and pass a 16-25HzAC signal pulse of 70-90Vrms. The surface mount ceramic capacitors are excellent replacements for high voltage leaded film devices. The smaller SMT footprints save valuable board space which is critical when creating new designs, and the capacitors are able to withstand today's higher lead-free reflow processing temperatures. The ceramic MLCC have excellent high frequency filtering characteristics, low ESR, and high temperature reflow capabilities. KEMET Tip and Ring capacitors are available in standard EIA case sizes and standard capacitance values from 0.001µF to 1.2µF. The capacitors have pure tin (100% Matte Sn) plated terminations and are 100% lead free which is ideal for new environmentally demanding designs.

Applications:
- Telecommunication ringing circuits
- Switch mode power supply Snubber circuits
- High voltage DC blocking
- High voltage coupling

Markets:
- Phone lines
- Analog and digital modems
- FAX machines
- Wireless base stations, ethernet
- Digital video recording set-top boxes
- Satellite dish
- Cable set-top boxes
- High voltage power supply, DC/DC converters
- Ethernet, POS, ATM hardware

MURATA SMD and Leaded MLCCs

muRata
Innovator in Electronics

RoHS Compliant **This product is RoHS compliant.**

The GR3 and RDE series of multi-layer ceramic capacitors (MLCC) have been designed by Murata to be incorporated in **LED lighting circuits**, immediately following the bridge rectification stage, to provide DC supply smoothing and EMI filtering. The GR3 family is for reflow soldering use and the RDE family provides radial leaded insertion production. Compared to standard ceramic capacitors test by Murata showed a **10dB reduction in acoustic noise** by using the new GR3 MLCC capacitors. Further noise reductions are possible with the RDE leaded parts.

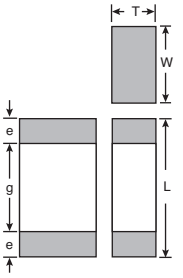
MURATA Hi-Cap Multilayer Ceramic Chip Capacitors

muRata
Innovator in Electronics

RoHS Compliant **This product is RoHS compliant.**

Hi-Cap: The Murata hi-cap, tantalum replacement product lineup is available in X7R, X6S, X7S, and X5R with capacitance of 1μF and larger. This line of high volumetric capacitance ceramic chip capacitors is available in 4V, 6.3V, 10V, 16V, 25V, and 50V. This product series (GRM) is offered with a nickel (Ni) barrier termination plated with tin (Sn), and is RoHS compliant. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

Why use ceramic chips over tantalum and aluminum capacitors? Ceramic chips offer better reliability, performance, no polarity, and allow design engineers to downsize designs with various package options from 0402 X5R 1μF to 1210 X5R and X6S 100μF. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to tantalum and aluminum caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a tantalum capacitor because impedance (ESR) of MLCC is lower at higher frequencies, above 100kHz. Consider Murata hi-cap as your tantalum capacitor replacement.



Recommended Capacitance of MLCC for Tantalum Cap. Replacement

Depending on the operating frequency, MLCC is equivalent to 1/2 to 1/10 capacitance value of tantalum cap. Because impedance (ESR) of MLCC is lower than tantalum cap. Refer to the impedance curve graph below.

Tantalum Cap.	MLCC Recommended Cap.
1μF	0.1 to 0.47μF
2.2μF	0.22 to 1μF
4.7μF	0.47 to 2.2μF
