MINIATURE CPC

Ideal for medical, instrumentation and industrial applications where size, contact density and durability are primary concerns. The nylon housings offer good resistance to a wide range of chemical agents while the IP67 sealing helps prevent ingress of dirt or fluids that would have an adverse effect on the contact interface.

Features:
- Sealed to IP67
- Pre-positioned 1/4 turn coupling ring with positive lock and alignment features
- Unique contact pattern for each position size helps prevent accidental mating with other position sizes
- Front or rear jam nut mounting
- Field repairable contacts
- Available in wire-to-wire, wire-to-board and wire-to-panel configurations

Electrical:
- Operating temperature: -55°C to +105°C
- Dielectric withstanding voltage: 2200VAC minimum
- Wire termination: Crimp
- Housing: single piece design, plastic

RoHS Compliant

SOLID STATE LIGHTING CONNECTORS

The 9159 of Board-to-Board interconnect system allows two PCB's to be mated end-to-end creating strips of LED lighting. Designed specifaclly for the unique Solid State Lighting (SSL) market requiring coplanar (horizontal-to-horizontal) PCB mating with a 5 Amp current rating in the smallest package available.

Wired Plugs

The cabled plug was developed to bring power and signlas onto the PCB's while keeping the same board level interface. This allows the designer to build a single PCB with a receptacle on one end and a plug on the other end to minimize cost and inventory. Regardless of where the PCB is used in the system, the cabled plug connector will then create the connection to the outside world. The optional latch can be inserted into the plug housing to assure positive attachment to the PCB in harsh environments without having to change the PCB connector.

Top Loading Sockets

The top loading socket allows complete PCB's to be replaced in the field without having to dissemble the entire strip boards. The connector has a two part insulator whereby the top of the connector will slide open allowing the plug connector to be pulled out either vertically or at a slight angle. Once the PCB is replaced, the cover is slid back like a Zero Insertion Force (ZIF) connector to the closed position.

Shorting Socket

The 2 position shorting socket was designed to plug onto the last PCB in the lighting strip to short the two contacts together, closing the electrical loop. Just as the cabled plug brings power and signals onto the light strip, the shorting socket completes the circuit while maintaining a single board design.

IMPACT™ HIGH DENSITY BACKPLANE CONNECTORS

TE Connectivity's new Impact™ backplane connector system is designed for increased speed and density to meet the future system upgrades and next generation requirements of data networking and telecommunications equipment. The Impact backplane system also offers our customers a value added approach of speed, density, cost and long term reliability.

The Impact connector design system contains a unique broad-edge coupled design which utilizes low impedance, localized ground return path in an optimized differential pair array. Additionally, differential pairs are tightly coupled and surrounded by ground structures to isolate the pairs, which in turn reduces crosstalk and increases overall bandwidth performance with minimal performance variance.

Features:

- 25Gb/s performance
- 100 Ohm Impedance
- PCB footprint available in two options for both backplane and daughtercard connectors:
  Option 1: .018" PTH, 1.30mm length
  Option 2: .0145" PTH, 1.15mm length
- Robust daughtercard connector design to withstand connector insertion forces into PCB
- Built in guidance available for improved mating alignment and to maximize available PCB real estate

Applications:

- Telecommunications equipment
- Hubs, routers, switches
- Central office, cellular infrastructure and multi-platform service (DSL, Cable Data) systems
- Data networking equipment
- Servers
- Storage
- Test and measurement equipment
- Medical diagnostic equipment

HOODS/HOUSINGS

The Han-Yellock® interface consists of a housing, bulkhead mounting on the housing side and a carrier hood with cover on the cable side.
Han-Yellock® offers the following features when assembling components:

- Han-Yellock® modules require only male crimp contacts
- The PE is contacted on the housing; it can be connected with crimp and/or Quick Lock contacts
- The Han-Yellock® hoods/housing are not plug-compatible with all other Han® hood/housing series

The Han-Yellock® system can be used with a variety of insulators and contact inserts in order to establish an interface.

Features:

- Two-part hoods for easy wiring and testing
- High robustness via an internal locking mechanism
- Earthed contacts PE in crimped or Quick Lock termination technique
- Protection cover retrofit on housing side

HIROSE FPC/FFC Connectors

HIROSE ELECTRIC CO., LTD.

RoHS Compliant **This product is RoHS compliant.**

Common Features:

- Ease of Use and Space Savings: The Flip-lock design allows for the placement of 2 or more connectors side by side as there is no need to waste additional space for a side latch
- Strengthened Flip-lock Actuator: The standard Flip-lock requires only 2.0mm height above the board. A strengthened lock lever is available which only requires an additional 0.4mm
- Supports Thin FPC (0.18mm): Does not require double-sided FPC to have any additional strengthening plate or stiffener and can therefore support a thickness of as little as 0.18mm ±0.05
- Prevention of Solder Bridge: Excess solder cavity absorbs excessive solder and avoids solder bridging
- Three different assembly types: Top & Bottom Contact and Vertical Mount

Common Specifications:

- Current Rating: 0.5A
- Voltage Rating: 50VAC
- Operating Temperature: -40°C to +70°C

- Multiple stack heights
- Robust contact design
- Molex's unique and patented solder-charge technology

Specifications:
- Voltage: 250V AC per
- Current: 2.7A per contact
- Housing: Glass-filled LCP UL 94V-0
- Operating Temperature: -55°C to + 125°C
- Contact Plating: Contact Area - 0.75µm Gold min.
  Solder Tail Area - 3.80µm Tin min.

MICROCLASP™ 2.0MM (.079") RECEPTACLES AND HEADERS DUAL ROW - WIRE-TO-BOARD

The original application for the MicroClasp™ connector system was Pachinko (gaming) machines. Most of these machines previously used 2.50mm pitch WTB systems with outer positive locks. As pachinko boards became higher density with more functions, makers were looking for a smaller connector that was also easy to install. Easy installation is important because new game upgrades on daughterboard modules would be installed on-site by pachinko parlor employees. Molex developed the 2.0mm MicroClasp™ system to meet these various needs. Notches would sometimes have to be cut into panels to accommodate the old 2.50mm pitch outer-style positive lock types, but not with MicroClasp™. The smaller pitch and inner positive lock saved space and are easy to actuate in high density areas. And a unique low insertion force terminal makes it easy for operators to insert/extract connectors. In addition, MicroClasp™ is among the smallest of its kind to carry 3.0Amps as most 2.0mm pitch systems can only accommodate 2.0Amps. The extra signal power and space savings is important so Pachinko makers and other equipment makers can offer more high-end graphics/sound/etc in smaller spaces.

MX150L™ CIRCUIT PLUG

With the application of optional circuit plugs, the MX150L™ system supports the ability to implement sealed blank cavities in both plug and receptacle housings. The circuit plugs occupy and fully seal the unused cavity and can be extracted and replaced with a standard male blade or female receptacle terminal. This feature provides the ability to plan for possible future circuit additions while maintaining the sealing integrity of the mated pair.

RoHS Compliant

ORGANIC FIBRE PLUG® (OFP) PIN RECEPTACLES

- These through-hole (tubular) receptacles are designed for hand, wave or reflow* soldering. The ORGANIC FIBRE PLUG® barrier prevents solder, paste or flux from contaminating the spring contact
- After soldering, the OFP® barrier is pushed out of the receptacle when the device is plugged in
- All parts are available as discrete receptacles; but for SMT assembly, certain receptacles are supplied on carrier tape per EIA-481 to feed industry standard pick and place machines

Test Points, Terminal Strips, and Terminal Blocks

KOBICONN TEST POINTS GLASS BEAD INSULATOR

Our PCB test point and terminals feature a large loop for easy probe attachment or to facilitate the clipping on of other components.

They are ideal for components which need frequent replacement and are also suitable for raising hot components above the surface of the PCB.

A glass bead in a choice of eight colors for identification purposes ensures a snug fit on the board. White, yellow, black, brown, blue, pink, red and green are available. Other colors available upon request.

The unique shape of the test point will not damage through-plated holes during assembly yet prevents any movement prior to soldering.

Also ideal as terminals.

- Three sizes
- Choice of eight colors

RoHS Compliant

PHOENIX CONTACT High Current Terminal Blocks

PHOENIX CONTACT INSPIRING INNOVATIONS

RoHS Compliant This product is RoHS compliant.

HIGH CURRENT PANEL FEED-THROUGH (PFT) TERMINAL BLOCKS

The newest generation of panel feed-through (PFT) high-current terminal blocks feature high retention forces and multiple mounting options. Manufactured with secure universal screw and ring lug/bolt connection technology, PFT series terminal blocks offer multiple mounting options across a wide range of wire gauges. The blocks snap into panel cut-outs without special tooling. Screw and rivet options can accommodate high mechanical stability for conductors.

Applications:
Designed for use in several industries, PFT series terminal blocks are especially useful within the telecom and power distribution sectors.
This series also supports electrical device manufacturers of filters, converters, inverters, transformers, power supplies, and industrial batteries.

MICRO SWITCH™ SPECIAL APPLICATION PRECISION SWITCHES

Contain a spring and set of contacts that convert mechanical energy applied to an actuator into an electrical output. Products include door interlocks that automatically cut power when a service drawer is opened, as well as switches that can handle a variety of special electrical load requirements. Wide variety of actuators, terminations, circuitry configurations, electrical ratings, contact materials, operating characteristics and sealing provide application flexibility. U.S., European and other approval agency compliance allow global use.
