D SERIES HEATSINKS

Ohmite D Series Heatsinks provide an innovative solution for SMT compatible semiconductors and resistors. The unique design (Patent Pending) combines tin plated, solderable rods with an aluminum extruded heat sink body. These rods (or "rollers") are mated mechanically to the heatsink by forging to reduce the thermal resistance between the heatsink body and the solderable feet.

R2 SERIES HEATSINKS

Ohmite's R2 Series (patent pending) heatsink provides a large surface area along with our C Series clipping mechanism to attach either a TO-220 or TO-247 package. The self-aligning features of the clip assure secure attachment and enhanced thermal performance. Because no screws are required for device mounting, additional fins can be added to the rear side of the heatsink for increased total surface area in a more compact space.

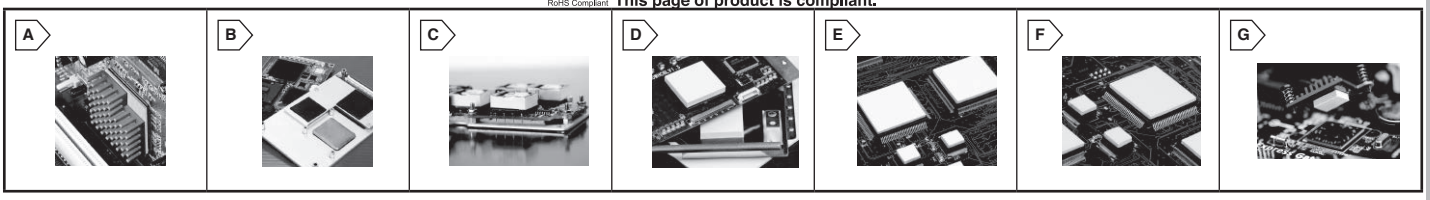
BERGQUIST Thermal Interface and Substrates

THE BERGQUIST COMPANY

RoHS Compliant **This page of product is compliant.**



THERMAL INTERFACE

Gap Pad® provides an effective thermal interface between surface topography, heatsinks and electronic devices where uneven surface topography, air gaps and rough surface textures are present.

Gap Pad® Provides:
- Elimination of air gaps to reduce thermal resistance
- Low-stress vibration dampening
- High conformability to reduce interfacial resistance
- Compatible with automated dispensing equipment

Applications:
- Aerospace/Military
- Automotive
- Computer & Peripherals
- Telecommunications
- Consumer Electronics
- Motor Control
- Power Conversion

✻ASTM D5470 test fixture used. The recorded values are at 20% deflection & includes interfacial thermal resistance These values are provided for reference only. Actual application performance is directly related to the surface roughness, flatness & applied pressure.

PANASONIC Thermal Graphite Sheets

Panasonic

RoHS Compliant **This product is RoHS compliant.**

EYG SERIES GRAPHITE SHEETS

PGS (Pyrolytic Graphite Sheet) is a thermal interface material which is very thin, synthetically made, has high thermal conductivity, and is made from a highly oriented graphite polymer film. PGS (Pyrolytic Highly Oriented Graphite Sheet) is made of graphite with a structure that is close to a single crystal, which is achieved by the heat decomposition of polymeric film.

It is ideal for providing thermal management/heat-sinking in limited spaces or to provide supplemental heat-sinking in addition to conventional means. This material is flexible and can be cut into customizable shapes.

Flexibility:
PGS is bending-resistant due to its flexibility. PGS can be used for areas such as curved surfaces and corners because its heat conductivity will remain unchanged in the absence of folds in PGS.

Thermal Resistance Property:
Thermal resistance represents the degree of non-conductivity of the heat. Materials with lower thermal resistance are a more efficient conductor of heat (Thermal resistance depends on hardness of, and surface condition of material as well as heat conductivity.)

Features:
- Excellent thermal conductivity
- Flexible and easy to be cut or trimmed
- Low thermal resistance

Specifications:
- Lightweight: Specific gravity: 0.85 to 2.1g/cm^3
- Heat resistance: 400°C
- Bending (angle 180, R5): 10,000 cycles

Recommended Applications:
- Cellular phone, DVC, DSC, PC and peripherals, pickup
- Semiconductor manufacturing equipment
- Optical communications equipment

STACO ENERGY PRODUCTS CO VARIABLE TRANSFORMERS AC VOLTAGE CONTROLS

Open models have an adjustable shaft design on most manually operated models that permits back-of-panel or bench mounting. Cased models are available in "C" styles enclose only the coil, while "CT" models provide protective housing for both coil and terminal board. Portable cord and plug models are cased plug-in models that have a ventilated steel case, line cord, receptacle, illuminated on/off switch and fuse.

TRIAD Power Transformers

TRIAD SPLIT-PACK® POWER TRANSFORMERS

The Triad Split-Pack® split bobbin transformer is an extremely versatile tool for PC board applications. Split-Pack® transformers are nonconcentrically wound with primaries and secondaries side-by-side. Unlike the secondary on-top-of-primary designs of standard PC board transformers, the split-bobbin winding and low capacitive coupling eliminate costly electrostatic shielding.

Features:

- Primary: 115/230VAC 50/60Hz
- Hi-pot tested at 2,500VRMS
- Class B UL recognized
- PC terminal pin spacing for accurate placement

Series connections: 230VAC
Primary: input 1 and 4, connect 2 and 3
Secondary: output 5 and 8, connect 6 and 7
Parallel connections: 115VAC
Primary: input 1 and 2, connect 1 and 3, 2 and 4
Secondary: output 5 and 6, connect 5 and 7, 6 and 8

TRIAD ISOLATION POWER TRANSFORMERS

For isolating equipment from direct connection to the power line. The primary and secondary are nonconcentric precision wound on separate arbors, assembled on a laminate core side by side separated by insulation. This prevents electrical connection, under normal or overload conditions, between the primary and secondary windings.

Specifications:

- Secondary voltage: ±5%
- Leakage current from primary to secondary is rated at less than 50μA and is typically measured at less than 10μA
- Hi-pot tested at 1500V
- Units with "M" suffix have 2-wire 6' cord, plug and socket
- Line cord, plug and receptacle are UL listed and verified to meet federal specifications

RoHS Compliant

LHV power GMA SERIES : MINATURE HIGH VOLTAGE DC/DC CONVERTER MODULE

The GMA Series is a unique range of low cost, general-purpose high voltage DC/DC converters. Output voltages are available ranging from 100V to 3kV depending on model. All units are configured for direct PCB mounting and are intended to be "designed in" to customers' equipment as a component.
The unregulated output is proportional to the input voltage. Alternatively external feedback control loops can be added to provide be added to provide regulated outputs. These high voltage power supplies are vacuum encapsulated in an ABS case to ensure maximum reliability and safety. Standard GMA models are three pin devices which provide a common 0V for input and output. All models are available with a range of input and output voltages, with either positive or negative output.

Applications:
- Ink Jet Printing
- Electrostatic Precipitation
- Geiger-Muller tubes
- Electron Beam deflection and focusing
- Test and Instrumentation
- Substance detection and Security
- General purpose

Features:
- PCB Mounting
- Small size
- Outputs up to 3kV
- 1.5 Watt continuous
- Positive or negative outputs
- Output proportional to input
- No minimum load requirements
- Input polarity protected
- Open and short circuit protected

FLUKE 805 VIBRATION METER

Features:

- A meter – not a pen – that measures overall vibration as well as specific variables like bearing condition and temperature, to provide a more complete picture.
- A combination vibration and force sensor tip that compensates for user variance (force or angle) yielding accurate, repeatable readings.
- A four-level severity scale and onboard processor calculate bearing condition and overall vibration using easy-to-understand textual alerts (Good, Satisfactory, Unsatisfactory, Unacceptable).
- Sensor sensitivity can read a wide range of frequencies (10 to 1,000 Hz and 4,000 to 20,000 Hz) covering most machine and component types.
- Straight-forward user interface that minimizes the user inputs to RPM range and equipment type

Water Soluble Wire Solder

Water soluble cored wire features a halide-activated system that has been neutralized with an amine. The amine hydrohalide provides a high activation level that produces excellent tarnish or oxide removal, and maximum capillary action, leading to faster wetting, and reducing the chances of thermal degradation of the boards materials. Any flux residue from this solder is readily soluble in hot water.

Features:
- Highly activated water soluble flux cored wire
- High Activity Level and Very Good Wetting
- Good thermal transfer reduces oxidation of solder iron tip
- Post-process residues easily cleaned in hot water

2300 SERIES DUAL CONDUCTOR CORDS

3M™ Dual Conductor Ground Cord is part of a personnel ground monitoring system. The 3M™ Workstation Monitors Models 724, 725, and 790 use a dual conductor type wrist strap system consisting of a dual conductor wristband and ground cord. The dual system allows for a monitored loop resistance measurement, which includes the wristband contact to the wearer and a redundant grounding path. If one conductor of the system fails, the other can still function maintaining the grounding of the person. As a result, this prevents static from being generated by the person, eliminating possible exposure to static-sensitive electronic components. The 2300 series are compatible with all existing 3M dual conductor fabric, metal, and thermoplastic wristbands.
